Oh, I dunno. Depends on their perspective and values and what they
want out of ham radio. "Bout a year or so ago we had a 13-year-old in
the neighborhood who decided he'd rather have a 20wpm Extra ticket
than a 5wpm Extra ticket so he scambled to get his code speed up to
20wpm thus he beat the April 15 date by a couple months.

Sorry if I wasn't clear, Hans. What I was referring to is the fact that the ARS
and cb get mixed up in many folks' minds. For example, hams sometimes get
blamed for RFI caused by cb and freeband types.

> I couldn't care less,
>just as I don't care what FRS or GMRS or any other xxRS does.

Me, neither - until the users of another radio service tear up the
neighborhood's TVs and hams get blamed for it. Or the regs for the ARS are made
increasingly restrictive because of the violations done by non-hams. Stuff like
that.

I don't care what happens on other services'  channels as long as it stays
there and doesn't affect ham radio.

> It's the
>FCC's job to take care of, not mine, not the local deputy Barney Fife, nor
>the USCG Auxiliary.

Agreed!

All absolutely correct. You see Rob, some of these guys here see
McVeigh as being their avenger for Waco. He is their hero, and they
don't want to see anything bad happen to him.

"I ask, Who are the Militia? They consist now of the whole people, except a few public officers."

- George Masson, June 1788 at the Virginia convention to ratify the U.S. Constitution.

The state of Georgia maintains a LEGALLY CHARTERED State Defense Force, which is NOT subject to federal control or federalizaton. While federal bureaucrats conveniently ignore the Second and Tenth Amendments, they ARE still part of the U.S. Constitution. The Founding Fathers, should they return today, would be nauseated at the present day power of the federal government.........something NEVER intended under any circumstance NOR allowed by a literal reading of the U.S. Constitution.

Keep your powder dry.

And it's that "ignore it, it will go away" attitude that allows problems like this to fester. The less INFORMED citizens squawk about it, the more the lawbreakers like it. And the LESS likely the Feds are to do anything about it.

>Subject: HR-2346
>From: K0HB k0hb@qwest.net

>HR-2346 is a CB issue, not a ham radio issue.

This is a self-deluding attitude. Millions of citizens think Ham is CB and vice/versa. It IS our business when THIER lawlessness impacts MY ability to operate.

How does THIER actions impact me?

(1) The average citizen doesn't know the difference between "Ham" and "CB".

(2) Same Ignorant Citizen winds up watching hashbars and listening to "Whiskey Ridge Runner" calling "Helllooooooo Skiiiiiiipland" in the last 30 seconds of a hotly contested sporting event on which he has a bet riding. The score is too close to call.

(3) Disgusted with attempts to get his CB'ing neighbor to lay off, he hit's up the local city council to enact legislation to bar towers and antennas. Since Ignorant Citizen is also the well-know publisher of a local newspaper, they act quickly.

(4) Local Amatuer Radio operators find themselves now fighting City Hall when trying to get a tower installed.

(5) Tired with being ignored or blown off with excuses of "no money for enforcement" by the FCC, the local politicos approach Senator Chestbeater and encourage him to stop the gross abuse of privacy and "domestic tranqulity" and enact legislation to allow local cops and deputy sheriff's the power to enforce certain parts of FCC Rules and Regulations.

(6) Now entrusted with new Congressionally-granted powers, local law enforcement acts quickly to overcome other negative media by ridding thier peaceful neighborhoods of illegal radio operators. Despite caveats of "....except Amateur Radio operators" having been written into that new law, local cops arrest dozens of legal operators and/or confiscate tons of privately owned two-way radio equipment. Local Hams and all three of the local LEGAL CBers are now having to spend hundreds if not thousands of dollars in legal fees to get thier gear UNconfiscated and get back on the air.

All of this was avoidable with a little prevention in the beginning.

> Would all you CB-lawyer-wannabes take this cluster-phuck over to
> rec.radio.CB.whatever.

The EPA is gonna catch up to you sooner or later, Hans.

Kim,

The Gospel According Dave would have you believe that:
(a) no citizens can petition an administrative agency alleging
that a rule is unnecessary, bad public policy, and not in
conformity with law, unless they are attorney; and,

(b) no citizens can oppose the use of military force
against civilian aircraft unless they have experience
formulation U.S. foreign or domestic policy; and,
(c) and most importantly, no citizen can oppose
47 CFR 97.503(a) unless they have passed the
code exam.

>All absolutely correct. You see Rob, some of these guys here see
>McVeigh as being their avenger for Waco. He is their hero, and they
>don't want to see anything bad happen to him.

How's this for conspiracies? Some of these kooks claim that at the time of his arrest, McVeigh shouted out to reporters that the government put a chip in his butt. That's why he planted the bomb.

My sides hurt for a week from laughing at that one.

Exceptions are everywhere. I doubt, however, that this 13-year-old represents any majority.

And what the government did in Waco was right? Why didn't they nail him in town? Then like cats in the kitty litter they tried to cover it up. For the information of this group that federal building housed the headquarters for the terrorists that set that fire in Waco Tex.   Was what happened in Ruby Ridge right too? Before that there was that thing in Missouri? It seems to me that the FBI and the ATF where growing out of control until the bombing in OK. So as I said in the previous post I wonder how many lives the bombing saved.

Just my opinion
73 Oris

Could be, I am not familiar with the format for such keys, But I am very familiar with a format that this matches exactly. These are (or appear to be) five letter groups from a one time double encryption pad. There are exactly ten groups of five letters each. It's classic stuff and without the 2 correct ten letter decoding keywords, yup, they may as well transmit right over the Internet. You will not be able to crack the message in under a few thousand years.... give or take.

That's right. And you wouldn't have needed to know anything whatever
about "bands" nor "edges". Just the numbers.

Larry, I know of no one else but you in this group goofy enough to try
arguing communications law with Phil Kane. My reply to you regarding
your citing statues is that you frequently choose one not relating to
the matter under discussion and try to make it fit your conditions (like
the one relating to commercial broadcasting which you trotted out
recently).

A question for you: Are you now or have you ever been a practicing
attorney?

What I believe and have previously stated here Larry is that your
attempt to draw a link between a tragic shoot down and morse code
testing is pathetic. They are not linked in any manner.

> > He has proclaimed that bad U.S. policy ties the two issues.
>

If your comment regarding "morse code policy" is true, why are you still
railing about the morse code testing issue?

Sure you did, Larry. You posted an addendum to a notice of this woman's
death bewailing the fact that she died without having access to the HF
bands (which wasn't exactly correct) as if that made a rat's ass. You
went on to post the drivel equating the wrongness of the shoot down with
the "wrongness" of continued morse testing for HF access. You were a
churl to post it.

I didn't think much of you for posting it then and don't think much of
you for trying to defend it now.

Steve,

I totally agree with you and the majority; this *could* cause a lot of trouble.

Here's an example that would actually be funny. Sometimes members of Civil Air Patrol are issued HF and VHF radios purchased with USAF/DOD funds. The member signs for it on a certain form. OK, now let's say fat Bubba sheriff waltzes in and says, "OK, bud, y'all gonna quit a-using that 'ere reddy-o and botherin' ole John, ya heah?" Now let's say, the operator, who holds a valid license issued by CAP/USAF tries to explain he ain't no dadgum CBer. Ole Sheriff Bubba then decides that he's just gonna take that 'ere reddy-o because "AH'm, th' law 'round h'yar and AH ain't a-puttin' up wid no backtalk. NOW. He and his county have a REAL problem. Angry radio op calls his state (Wing) director of communications who then calls DOD internal audits. Imagine ole sheriff's surprise when the government agents walk in and proceed to charge him with unlawful seizure of US Gov't property in addition to whatever action the radio op takes! Have you ever seen DOD audit guys at work? It ain't pretty! and I'd be laughing my *** off if it happened to me. Matter of fact, I would WELCOME such a thing. It'd be SOOO freakin' funny!

By that definition then it must be mandated that
every male, between the ages of 17 and 45, who
if fit to serve (not a cripple, mentally ill, a felon or
a homosexual) must be trained and equipped by the
state.  Or, in other words, mandatory military service
in the National Guard.

:           "I ask, Who are the Militia?  They consist now of
: the whole people, except a few public officers."
:
:               - George Masson, June 1788 at the Virginia
: convention to ratify the U.S. Constitution.
:
:
:                The state of Georgia maintains a LEGALLY
: CHARTERED  State Defense Force, which is NOT
: subject to federal control or federalizaton.   While federal
: bureaucrats conveniently ignore the Second and Tenth
: Amendments, they ARE still part of the U.S. Constitution.
: The Founding Fathers, should they return today, would
: be nauseated at the present day power of the federal
: government.........something NEVER intended under any
: circumstance NOR allowed by a literal reading of the
: U.S. Constitution.

> happen because it is illegal."

Actually, I don't think that is exactly what I said, Cecil. However, I'll accept a variation of that - bad things have happened, do happen, and will happen, because of drugs - both from their use and from the illegal trade.

> You could argue that the alcohol
> problem doesn't end with just
> that drink in the home.

A very common argument for drug legalization. Yes, alcohol does cause problems. However, why would we want to add to those problems by legalizing drugs? It seems to me that if we want to solve a problem, the most obvious step is to not make the situation worse by adding to it. In other words, alcohol is not a good argument for legalizing drugs.

> Just because someone may use a gun irresponsibly
> is not a good reason to take away my guns.
>
> Just because someone may use marijuana
> irresponsibly is not a good reason to take away
> my marijuana.

A gun can be used responsibly. However I have yet to see a situation where marijuana, or any other illegal drug, can be used responsibly. Even the example you gave in the previous message (using drugs after your kids were asleep) failed to show a responsible use (it was more an example of irresponsible use - keeping and using illegal drugs in a home with kids).

> I talk about my experiences, Dwight. I've
> never used crack or heroin. But, when I was
> younger, half of Silicon Valley used cocaine.
> I used it responsibly.

Cecil, you cannot possibly use something that is illegal responsibly. That is like saying that you can use a stolen car responsibly. Or you can use stolen money responsibly. Yes, you can use drugs in a prudent manner, but it is still a crime (and there is absolutely nothing responsible about criminal behavior).

> Education, knowledge, and treatment are the
> keys to the drug problem, not the war on
> drugs which has turned out to be a war on
> private citizens.

Cecil, you sound like a fairly well educated and knowledgeable person (certainly knowledgeable enough to seek your own treatment), yet none of that has prevented you from using drugs. If none of that has stopped you, why should we assume for a moment that any of that will stop anyone else? In the end, if a criminal is not willing to change his behavior, the only option left is the laws. By the way, to be more accurate (and honest), the war on drugs is a war on private citizens who commit crimes (very few law-abiding citizens are even bothered by it).

> Again, just because unfair laws exist doesn't
> make it right. There is wholesale violation
> of the drug laws and citizens are losing
> respect for the government that is enforcing
> them.

Blaming the government is the game used by malcontents - like the government is some evil, big brother-like, entity that is always wrong, therefore has to be wrong about whatever issue the person who invokes that is promoting. Sorry, but I'm smart enough to know that just because the government occasionally does something wrong, not everything the government does is wrong. And, in the case of drugs, the government is not wrong - it is doing exactly what millions of Americans expect it to do.

> Most of my friends at all the CA companies I
> worked for used illegal drugs.

What is your point? So you had friends who used drugs at those companies. It is certainly not uncommon for drug users to have friends who use drugs. Most of my friends who work, or have worked, at California companies do not, and did not, use drugs. All any of this proves is that we choose different types of people to have as friends.

> The purpose of the drug laws is not to keep
> people from using drugs. Their purpose is power,
> control, and confiscation of private property.
> If we don't stand up for our rights, we are
> going to lose them.

If confiscation of private property was the goal of the drug laws, why did it take decades after the war on drugs started to enact the forfeiture laws? And, I am standing up for my rights, Cecil. I'm standing up for my right, and my family's right, to live in this country without the many problems associated with drugs.

>
> (I'm surprised that the city didn't settle outright - that's why cities carry insurance. Perhaps the amount of the claim was outrageous and therefore the city litigated THAT issue.)

As I understand it, the insurance company did eventually pay (and raised it's rates in the process). Because of that (more lawsuits and still higher insurance rates), the city made sure nothing like this would happen again. Two months after the lawsuit ended, they started cutting down every single tree on public property throughout the city. And, to this day, there is not a single tree on public property in that town that is taller than six feet.

And, to be perfectly honest with you, Phil, when they cut down that beautiful Oak tree in the park across the street, I would have paid money to get at that woman and her attorney. Of course, I would have had to stand in line - most of the residents were mad as hell at those two.

It is exactly this type of lawsuit that makes people so angry at lawyers. There is no possible way to maintain a tree so that a limb cannot possibly fall off. Therefore, to avoid a BS lawsuit like this, the only option is to cut down every single tree. What a crappy world we would live in if we made it impervious to the lawsuits of lawyers. Sorry, but I would rather get rid of the lawyers instead.

I think, Dick, that most ordinary people understand the meaning of the terms
"band" and "edge." They won't lose that understanding by studying for their
tests.

When I was first licensed, there were about 150,000 hams. There are 650,000 today. The long-term growth has been reasonable.

Why do some hams feel a need to perceive the hobby as dying on the vine?

I agree. Another silly and archaic thing we do as hams is to spend a lot of time talking into microphones. This is supposed to be the "digital age." The emphasis is now on computers and keyboards, not microphones and CW keys. Let's get rid of the voice modes, and expand the use of digital data communications. I say let's abolish ALL voice modes on

```
HF at the same time we get rid of the remaining 5 WPM code testing
requirement.

Jim:

My quarters are neither "stark" nor "isolated" enough to do justice to Mr. Manson, nor could I provide adequate security. Realizing this, I willingly pay a portion of my taxes to support the State and Federal penal institutions that perform this task in my behalf. And since it is a proven fact that it is much more economical to keep the likes of Charlie Manson and Tim McVeigh alive than it is to mercifully put them out of their misery with an intervenous injection of barbituates, I prefer to keep them alive, and therefore, miserable. Why are you such a wimp when it comes to punishing violent murderers?

[[This message was both posted and mailed: see
the "To," "Cc," and "Newsgroups" headers for details.]]

Hello All.

I was browsing QRZ.com when i stumbled across this little article

http://www.qrz.com/articles/00/10/15/1215251.shtml

It was talking about a new Lic free MURS (Multi User Radio Service) in the 151 Mhz Range....what i found distrubing was what the article said about the possiability of no-code & Possiably no test amatuer radio service with only one class of licence (If i read it correctly) and read between the lines right

Is this true ? - Did i just misread it ? - or is this a possable setup by the fcc to lump all the " Hobby " radio users into 1 basket then at a later date the FCC may or will yank the rug out under everone's feet ? - Let's face it radio spectrum space is very valuable in todays market and will only get more scarce.

While i have to admit i wasn't too concerned about the advent of no-code tech class (I'm actually a old school tech - 5WPM & General written) would'nt the no code/ no test type of radio service just open up the floodgate for a free for all and ruin it for everyone ?

This is not ment as Fuel for a flamewar, Just for cussin & Discussing

Have a nice one all

Michael - N0JVT

P.S: Don't forget to remove the STOPSPAM from the end of my e-mail
adderess to reply

In the year following the date code was dropped to 5 WPM, there was no
significant change in the age or number of new Hams. We only gained
about 1% increase.

The only major change was about 30% of those who were already Ham's upgraded.

If code is such a barrier, where are the lines of people? All reducing code does is give existing people free upgrades.

Face it folks, young kids (and other people) aren't interested because this is old boring stuff. It isn't a video game. It is work and learning, not recreational.

73 Tom

It is no more or less work and learning that it was when I was attracted to ham radio, Tom. In my high school of 1000 students, there were 2 hams -- not a majority by any stretch. There were teen-aged hams, but they were a minority even back then.

There may have been a somewhat larger percentage of youth in ham radio those days that today, but that was primarily due to the Novice license. The rules have made the entry-level exams so much harder than they were in those days, and at the same time some are telling all the youth that if they pass the tests they are taking a "dumbed down" exam that gives them a license that is virtually useless. If you consider that the entry-level HF license is now the General, and compare it to the Novice, it starts to look a bit different. How can we expect to attract youth in the same numbers we once did?

For the most part, I don't buy the old, boring stuff. When I was a kid, telephones were routine items, but the kid next door and I both gathered our tin cans and wire and made our own. When I was a kid, I could have (risking parental wrath) picked up the phone and called Europe, but I got a real t thrill out of talking a few states away with a station I had assembled myself.

The exception today may be that VHF HT operation is a bit boring, but the rules set that up as the entry-level license for most people and that just doesn't look as exciting as does HF operation. Even if the entry-level op decides to pass the code test and become a Tech+, those small slivers of HF aren't very exciting any more and if one works only the occasional QSO, it will not be as exciting as the wall-to-wall signals I remember on the same band segments. If ham radio has become old and boring, as you put it, it is not because its potential is old and boring, but because those first steps that people are allowed to take are on some ground that we have not made very exciting.

Today, we have Amateur Radio technology I couldn't have even dreamed of as a 13-year old Novice, what with it being much easier to put together a station that will do really cool things like satellite communication, meteor scatter, moonbounce, a host of computer-controlled digital modes, and the like. A group of hams recently used one of these digital modes to do a 2-way QRP moonbounce contact using old home-satellite dishes. When I was a kid, this stuff would have been fascinating to me -- a lot more fascinating than the tin-can phones, I tell ya.

The commercial broadcasting case cited was very much to the point.
In that case the court rules against the FCC holding that actions and
rules once proper can become improper because of technological
changes. That case is relevant to the Morse code exam requirement
now before the Commission.

> A question for you: Are you now or have you ever been a practicing
> attorney?

No. Dave, do I need to be attorney to petition the FCC to delete
an unnecessary and non-conforming rule? Do I need to be an
attorney discuss and debate the law with Phil or any one else
on this newsgroup?

Well of course they not linked, but they are both the result of
government action/rules that are unnecessary, not in the
public interest, and not in conformity with law. It was government
policies, actions, and rules that created these situations.

Dave, you offer no defense of these policies or rules, so what your
point?

Dave, you are the one trying to equate the two. I argue that both are
wrong,
and both are the result of government policies, actions, and rules.
The fact that results are dramatically different does not make
the discussion of the cause irrelevant.

>fat Bubba sheriff waltzes in and says, "OK, bud, y'all gonna quit a-
>using that 'ere reddy-o and botherin' ole John, ya heah?"

Hi Jerry,

The problem is NOT so remote. The Sheriff's Department in my home county has been using 151.625mHz as a "talk-around" channel for several years and has threatened arrest of anyone "jamming the Sheriff's frequency".

I have approached three different dispatchers with copies of FCC frequency tables and copies of the FCC's databases with the Sheriff's Departments allowed frequencies and callsigns and shown them that the itinerant channels are NOT "Sheriff's Channels".

The problem is usually "resolved" until their is a change over in staff. Thier local VHF repeater is still IDing with the wrong callsign, though. Sooner or later it will catch up to them and they will cerainly whine about "WE DIDN'T KNOW!"

To say they are ignorant of radio spectrum programs or policies is a GROSS understatement! It doesn't take a college degree or a career in Naval Communications to see how quickly this kind of "power" to "enforce" FCC regulations can be misused or abused.

> do happen, and will happen, because of drugs - both from their use and
> from the illegal trade.

Bad things have happened, do happen, and will happen, because of the obsolete sodomy laws which prohibit oral sex between married people. Just because a law exists doesn't mean it is a good law.

> In other words, alcohol is not a good argument for legalizing drugs.

Alcohol is a perfect argument for legalizing drugs. Alcohol *IS* a legal drug. For your argument to be consistent, you must also advocate making alcohol illegal.

> A gun can be used responsibly. However I have yet to see a situation where marijuana, or any other illegal drug, can be used responsibly.

Are you ignorant of medical marijuana? It is being prescribed right now in CA for nausea and other ailments. For certain conditions, it is a wonder drug. People who can't take their medicine or keep food down because of nausea, can do so after smoking a joint.

> Even the example you gave in the previous message (using drugs after your kids were asleep) failed to show a responsible use (it was more an example of irresponsible use - keeping and using illegal drugs in a home with kids).

Adults have a perfect right to be irresponsible. Are you going to outlaw food because fat people are irresponsible?

> Cecil, you cannot possibly use something that is illegal responsibly.

Then you cannot use free speech responsibly in Cuba. Then you cannot use oral sex with your wife responsibly. There are things that are illegal that shouldn't be illegal, Dwight. Not all laws are good laws.

> Cecil, you sound like a fairly well educated and knowledgeable person (certainly knowledgeable enough to seek your own treatment), yet none of that has prevented you from using drugs.

If I had consumed alcohol during prohibition, would that have been such a bad thing? The difference between you and me, Dwight, is that I believe an individual's life belongs to that individual. You, OTOH, believe an individual's life belongs to the state. Happy socialism!

> Blaming the government is the game used by malcontents - like the government is some evil, big brother-like, entity that is always wrong, therefore has to be wrong about whatever issue the person who invokes that is promoting.

Neither is the government always right as you seem to believe. Some laws are just bad laws. The present set of US drug laws needs to be overhauled. According to the History Channel, the purpose of making marijuana illegal was to be able to discriminate against Mexican nationals. NY mayor La Guardia commissioned a study of

marijuana and found it to be no worse than alcohol, and better
in a some ways, i.e. less addictive, easier on the liver, etc.

>   If confiscation of private property was the goal of the drug laws,
> why did it take decades after the war on drugs started to enact the
> forfeiture laws?

It takes awhile to take away the freedoms from a once-free people,
Dwight, but it is certainly happening. It's hard believe that you
support murdering citizens so the state can acquire their property
which is exactly what happened in CA.

What it really comes down to is too many business band radios got sold without the people who brought them getting the required FCC license. So the FCC just made things simpler for themselves by making it a license free service on 5 of the old business band frequencies. Now anyone can buy one of the "MURS" radios and use it for just about anything they want, and the FCC does not have to worry about the licensing issue any more.

So when you get down to it there are now effectively 3 bands for unlicensed Part 95 "CB Radio", 40 channels on H.F. (11m band) - 14 channels on UHF (FRS radios just above the Ham 70cm band) - and now 5 channels on VHF (MURS radios just above the Ham 2m band). In a way CB Radio is expanding in to a limited version of Ham Radio, but with heavy restrictions on power, antennas, and types of emissions allowed. Of course those restrictions have never seem to be a problem for the many CBers running power, out of band operations etc. If I had a guess for the next area where problems will emerge it would be with MURS radios.

You can't have it both ways, Dwight. You love all laws so you cannot possibly object to this one. You cannot be allowed to pick and choose the laws you like. It's different when it's your ox getting gored, isn't it?

You are myopic Cecil. How many had to suffer to get you that one joint? How many people were killed to get you the dope for that one joint? What was the total cost in dollars and human lives to get you that one little joint? It is not a victimless crime. You will probably say "none," but you don't know that. How many people were killed or injured to protect the crop of marajuana from which your little joint was made? Those like you like to seperate yourselves from this information. You don't like to think about

what goes on from planting to joint making. It makes what you do seem
harmless and it helps to keep your conscience clear doesn't it.

> > You can't use "drugs" because they are not victimless crimes. Someone

One thing I notice about libertarians is that they are experts at
justification. "I'm retired and living alone...." Again, how many people
were hurt or killed so that you could have that one little joint? One is
too many. There is no responsible way to use an illegal drug.
>
> > Given your thinking below I can sneak up behind someone and pick his

Explain the use of force here. He wasn't forced to do anything. It was
there and I took the opertunity. No force involved. Involuntary doesn't
equate with force.

> from themselves.

If kids should be protected from stupid parents then why shouldn't I be
protected from stupid adults? That's why it is illegal to fire a gun within
the city limits of most cities. That's why the speed limit is 30MPH on most
city streets. You can't legislate away stupidity but you can make stupidity
very costly.

> Otherwise, someone may force you to get a facelift to

Oral sex is not sodomy.

>Just because a law exists doesn't mean it is a good law.

Yep.

>Alcohol is a perfect argument for legalizing drugs. Alcohol *IS* a
>legal drug. For your argument to be consistent, you must also
>advocate making alcohol illegal

Nope. The rabbit is out of the bag as far as alcohol goes. Legalizing other drugs does not make them less problematic or more "right". Drug abuse is drug abuse, whether it's pot, beer, or Granny's Magic Elixr.

>>   A gun can be used responsibly. However I have yet to see a
>> situation where marijuana, or any other illegal drug, can be used
>> responsibly.

>Are you ignorant of medical marijuana?

There are responsible uses of pot, just as there is a bonafide use for MODERATE amounts of alcohol. The way I read Dwight's comments is that it's possible to IRresponsibly use a LEGAL drug. No use compounding the problems.

>Adults have a perfect right to be irresponsible.

No they don't. Irresponsiblity places others in jeopardy and NO ONE has the right to jepoardize MY life or that of my family.

>Are you going to outlaw food because fat people are irresponsible?

A fat person is not likely to drive left of center just because they ate too much. A drunk or junkie is, however. How can you analogize the two, Cecil?

>Then you cannot use free speech responsibly in Cuba.

Sure you can...as long as that "free speech" supports Castro or dem\nounces the United States. (LOL!)

>Then you cannot use oral sex with your wife responsibly.

You haven't seen my wife, have you?

>There are things that are illegal that shouldn't be illegal, Dwight.

Then campaign for their change, Cecil...Make it a ballot issue. The thing here is that organizations like NORML (National Organization for the Repeal of Marijuana Laws) has been campaigning for such repeals, yet they cannot convince any majority of the electorate that such an action would be in the communities best interests.

This is not a matter of the bureaucracy "supressing" them or denying them due process...it's a matter of society deciding what's in THIER best interests...and so far a majority of Americans are NOT sufficiently swayed that another legalized drug is in thier best interests.

>NY mayor La Guardia commissioned a study of
>marijuana and found it to be no worse than alcohol, and better
>in a some ways, i.e. less addictive, easier on the liver, etc.

And in MODERN studies (ie: NOT the 1930's!) have determined that permanent brain damage DOES occur with the use of certain forms of cannibis and in certain other persons due to otehr metabolic functions. This per the AMA, AAOS and ATS.(*)

This was in the 1990's, by the way, Cecil. I have no doubt that LaGuardia's study may have been enacted for the purposes you cite, but the other medical effects have been since proven valid.

>It takes awhile to take away the freedoms from a once-free people,
>Dwight, but it is certainly happening.

And the embarrassing thing is it's done with our consent. We have so "First Amendmented" and "Civil Right's" ourselves to death that we can no longer say what we want without fear of prosecution. Neither can we associate with those whom we care to at the risk of violating someone else's Civil Rights.

The lack of foresight and responsible THINKING is our problem..........

73

Steve, K4YZ

(*) American Medical Assoc., American Assoc of Osteopathic Surgeons and the American Trauma Assoc., all of whom who have reported at various occasions in their respective journals long term damage from cannibis consumption and it's contributory nature to otehr disease processes and injuries.

Oral sex is (was?) defined as sodomy in the Texas Sodomy Laws. I believe
that is still true in Louisiana.

>   Nope. The rabbit is out of the bag as far as alcohol goes. Legalizing

But one is legal and one is not. That's certainly not right.

> >Adults have a perfect right to be irresponsible.
>

Fat people don't have a right to be fat?

> >Are you going to outlaw food because fat people are irresponsible?

Seems you believe driving left of center is OK if one is fat and sober.

> Then campaign for their change, Cecil...

That's exactly what I'm doing, Steve, along with the Governer of NM.

Kevin, you are like the kid who murdered his parents and then threw himself on the mercy of the courts because he was an orphan. The immoral, illogical drug laws are the cause of all that misery you list. It's certainly not my fault. All that occurs whether I smoke

a joint or not.

Of course not, Ed. When did they ever say anything in words that explain their exact thoughts?

I have heard them say that continued growth is important to the
> health of the Amateur Radio service in the face of increasing spectrum
> pressures.

Right! and by Jove, if the warm bodies 'don't want to', we'll help
make it so easy that they will (won't they? WON'T THEY?)

The probelm is that Freebanders and CBers illegally running VFO and
High power operation on the legal 40 also use modified ham gear, and
illegal gear built for that market. The public doesn't know the
difference between ham radio, legal CB, illegal CB, and out-and-out
freebanding. All looks the same to the unknowing.

>Because they are bored or just plain pulling our legs. The hobby
>isn't dying at all. Period. A 1% increase doesn't mean the hobby is
>dying.

A 1% decrease wouldn't mean the hobby is dying, either. I expect to see some decrease as the many Techs who became licensed when the no-code Tech license was introduced, but never became active as hams, do not renew their licenses. The numbers will drop, maybe as much as 20%, by my finger in the wind. I am sure there will be those that proclaim how it is dying, in spite of the fact that these hams were lost to us as long as 10 years ago.

I guess I have a long term view of investment, rather than short term. :-)

Yes, I said that.

> They NEVER just memorize nor word associate their way through
> the tests (the few who are actually taking tests).

Didn't say that.

Good thing you are not tested on your understanding of the issues on rrap. On this one, you didn't make the requisite 75%. :-)

Okay, as long as we all understand that you are using that special ability to read people's secret thoughts, I can let it go at that.

Thanks for the clarification. I am curious, though, not having your special ability. Why would people with no vested financial interest in the outcome have secret thoughts that Amateur Radio needs warm bodies at all costs?

I missed some of the postings but I thought we were talking about a ham
using a transmitter VS a CBer using the same transmitter. How's the cop
going to tell the difference? - the FCC license.

Well, the problems are on the way. Guys have discovered that if you turn this cute little pot, the radio is 'louder' (read, I'm trying to transmit wideband FM with my radio). Amps are being discussed. How to replace the dummy load antenna on an FRS radio with a 'real' antenna. The big thing is that they are moving the mess out of the HF bands where there won't be a problem with F2 reflection. Of course, there is sporadic E and tropo effects, but hopefully it will tend to keep transmission within the United States and reduce the incentive to run high power.

As far as business band, I assume true business owners will switch to trunking radios - anywhere to get out of the way. A co-worker of mine bought a boat last year and is enjoying the marine radio. On land, of course.

Sigh.

73 from Rochester, NY
Jim

ps - one can only hope that the new bands will attract people who only want to communicate locally. This is not an insignificant number of CBers. From talking with some (face to face, here, locally) I am finding out the only reason some of them run amps (small, like 50 watts) is so they can actually communicate 10 miles what with all the big radios out there in 'skipland'. If a large portion of the CBers move to VHF or UHF to obtain reliable local communication, it might just become possible to actually enforce regulations back on 11 meters.

Even if it were 1 WPM it'd be still a waste of time to have to learn it and
not to use it at all once licensed. In my opinion code is the single most
significant factor that HAM loses ground as a popular hobby.

>

Naturally.

>

The code is still there so there is no people on the line, simple as that.

>
> Face it folks, young kids (and other people) aren't interested because
> this is old boring stuff. It isn't a video game. It is work and

Believe me, I am MSEE major and I can be as, if not more, qualified to be
licensed but when I started to learn code in order to be licensed I cooled
down. I am still hanging in there but I am not going to be on the line
any time soon. I am just that close to begin transmitting. A license would
tip me to get a microphone to get me started.

That's a bit exaggerated of course. I have transmitting equipment but I don't
have any receiver yet. The code requirement has kept me in the mode of being
a frequent HRO visitor but not customer for a long time. I am afraid HRO
won't get my business any time soon except I kept on picking up free catalog
from them each time I visit..

Oh, I found you agreeing to a major degree; however perception is
everything.

Since I do not know Larry Klose, how would I presume to know whether he has
experience as an attorney? I do not know. He has obviously had lots of
experience in the formulation of US foreign and domestic policy--if he has
ever voted. But again, I do not know. And, again, I do not know if
anything of his experience as a radio amateur.

And, again, my comments have nothing to with the authors or topical
discussion at the time of my posting. My comments had everyting to do with
your one line: "This is most interesting coming from a fellow with little if
any experience in either field." My observation regarding your comment--and
I am of the opinion it would bridge over any opinions expressed here under
any topic--was that one need not have experience to hold a particular
opinion in any particular subject. That is all. Nothing more.

Kim W5TIT

Statistically, there was virtually no difference in lowering CW from 13 WPM to 5 WPM. This is a repeat of earlier test reductions. The big sales pitch we all heard was we were going to get an influx of new Hams.

That's why Kenwood pushed the FCC so hard. $$$$$

Didn't work.

We created a no-code tech because it was going to be "the answer", yet many of them turned out to not have the faintest interest in the hobby. Of those I know first hand, some never actually took the tests they were supposed to take. Few of them are active or interested. I know about 30 people who received no-codes...only two remain active. One is a 13 WPM General, and the other is a wife who uses the radio to talk to her husband.

At MFJ, where the people work with radios, over a dozen people became no-code hams. Of those, only one is active.

I would think if CW was a barrier, there would have been a steady stream of no-coders entering the door. Not a big shot that tapered to nothing. It would seem logical that a reduction from 13 WPM to 5 WPM for HF operation would have a large impact on newcomers...yet it didn't.

I wopuld think the no-code class would be a hit, didn't happen.

Umm, no code has been available for a long time. It hasn't worked so far. Should we wait longer?

There are all sorts of people in the world. Virtually all people get interested by listening and so have receiving equipment or experience. That is the general rule.

CB radio has no code test, activity there has dropped like a rock from the years when it peaked.

I'm not discrediting you, but there is nothing that has happened so far that indicates what you predict is true. Suppose we drop CW, and nothing happens except problems. Do you suppose we can put it back later?

Have you know anything that was deregulated or opened-up that became more orderly?

73 Tom

Well Leo.......it seems to me you have 3 options.

#1. You can quit your crying, suck it up, and learn the code.

#2. You can sell all your equipment and spend your time doing something you can handle

#3. You can hold your breath and wait for the code requirement to go away.

I recommend number 3
de K0FL

Yep. If you have to shoot the invader breaking into your house, and the

shot blows him back outside, drag him back inside the house before
calling the cops.

From H. R. 2346 (now 47 U.S.C. 302a, as amended)...

(2) A station that is licensed by the Commission
pursuant to section 301 in any radio service
for the operation at issue shall not be subject
to action by a State or local government under
this subsection. A State or local government
statute or ordinance enacted for purposes of
this subsection shall identify the exemption
available under this paragraph.

Wrong-o. RACES as a (sub)service still exists. What was
eliminated was separate stations (= call signs) for RACES
stations. The way out - license the station as an amateur
radio club or use the call sign of any member or honcho.

Maybe not where you are, but here in Oregon the RACES and ARES
are co-terminous - same folks, same repeaters. ARES acts when
the situation is not serious enough for the formal emergency
services to be fired up.

Most states that issue a permit to carry a concealed weapon will also require the holder to immediately announce that he/she is carrying a concealed weapon when approached by a law enforcement officer (even off duty law enforcement officers are required to do this in some states). The choice to frisk is based on the circumstances, not on an announcement of a concealed weapon. If the circumstance warrants, a person will be frisked to discover if a weapon is present regardless of any claims regarding a weapon. If the circumstance does not warrant, the person will not be frisked even following the announcement of a concealed weapon.

I detect a tad of that "special ability" of divination at work here.

How has it been determined that Technician class licensees
"never became active as hams?" Or that they will "not renew
their licenses?

In the PRE-restructuring time from end of March 1998 to the end
of March 2000, the number of total US amateur radio licensees
grew from 674,767 to 677,784 for a gain of 0.45 percent in that
period of two years (based on Mar 98 total licensees).

In that same time Technician class licensees grew by 21,408
but all the other five classes, together, lost 18,391.

Technician class license numbers did not jump up immediately
ten years ago but have grown steadily. If there is any validity to
the claim that Techs will all fail to renew (implausible) then there
will be an additional drop of approximately 20K (give or take) in
US ARS numbers over the next year. Since the total of non-
Technician licensees has been steadily dropping (but at a small
amount, roughly equal to about 80% of the increase of Techs),
then there will be a marked change in the total licensees.

>The numbers will drop, maybe as much as 20%, by my finger in the wind.

Which "numbers?" At the end of March 1998 Technician class
licensees represented 27.2% of all US ARS licensees. At the
end of March 2000 Technician class licensees represented
30.2% of all US ARS licensees. Steady growth there. Steady
decline in the total number of non-Technician licensees and
those declines cannot be all blamed on the lack of renewal of
the Novice class licensees.

>I am
>sure there will be those that proclaim how it is dying, in spite of the fact
>that these hams were lost to us as long as 10 years ago.

Which class are "these hams [that] were lost?"

What about the 18,391 licensees who did not renew between
Mar 1998 and Mar 2000 that were NOT technician class?

Note that these numbers I've given do NOT encompass the
restructuring date of 15 April 2000 nor can they be
explained away in some long, drawn-out denial-syndrome
posting (as another has done). The code-tested licensees'
numbers are dropping, they were dropping before, they will
continue to drop by all the database tabulations. That's
not a "finger in the wind," it is merely a "salute." :-)

W6RCecilA wrote:
>
> Just because a law exists doesn't mean
> it is a good law.

Don't think I said otherwise, Cecil. However, the existing drug laws are just fine by me.

> Alcohol is a perfect argument for
> legalizing drugs. Alcohol *IS* a
> legal drug. For your argument to
> be consistent, you must also
> advocate making alcohol illegal.

Sorry, but I disagree - alcohol is not a good argument for legalizing drugs. The fact that alcohol is legal does not even suggest that we have to, or should, legalize drugs. As I said before, alcohol already causes enough problems, so we certainly should not add to those problems by legalizing drugs.

And, there is absolutely nothing that requires us to treat drugs in a consistent manner - we don't treat prescription pain killers and aspirin the same, for example. Illegal drugs and alcohol are two different things, so there should be different laws for each.

> Are you ignorant of medical marijuana?

Stop trying to demean anyone who disagrees with you, Cecil. Yes, I'm aware of so-called "medical" marijuana. However, I agree with those doctors who think it is a bunch of nonsense - promoted primarily by those who want drugs legalized.

> Adults have a perfect right to be
> irresponsible. Are you going to outlaw
> food because fat people are irresponsible?

You brought up the "responsibility" junk, Cecil. As far as I'm concerned, it has absolutely nothing to do with a conversation about drug legalization - it is not the reason certain drugs are illegal.

> Then you cannot use free speech responsibly
> in Cuba. Then you cannot use oral sex with

> your wife responsibly.

Stick to the subject. Sex and Cuba have absolutely nothing to do with drug legalization. For that matter, as far as I'm concerned, alcohol has nothing to do with drug legalization either.

> The difference between you and me, Dwight, is
> that I believe an individual's life belongs
> to that individual. You, OTOH, believe an
> individual's life belongs to the state. Happy
> socialism!

Cecil, we've already talked about this. The effects of illegal drugs goes far beyond your life or your living room. Therefore, this is not solely a matter of your personal freedom or your personal life.

> Neither is the government always right as you
> seem to believe.

Now you're flat twisting what I've said. In the part you cut off, I said, "I'm smart enough to know that just because the government occasionally does something wrong, not everything the government does is wrong." Now, since I specifically said that "the government occasionally does something wrong," how can you possibly support your statement above that I seem to believe that the government is always right.

> According to the History Channel, the purpose
> of making marijuana illegal was to be able to
> discriminate against Mexican nationals.

If you're going to try the "race card," why don't you add in blacks and indians?

> NY mayor La Guardia commissioned a study of
> marijuana and found it to be no worse than
> alcohol, and better in a some ways, i.e. less
> addictive, easier on the liver, etc.

Who cares? As I said before, alcohol kills thousands each year, so why add to that problem by legalizing drugs.

> [snip] It's hard to believe that you support
> murdering citizens so the state can acquire

> their property which is exactly what happened
> in CA.

That is really sick, Cecil. Obviously, you'll say anything, attack anybody, in defense of your darn drugs. Are they really that important to you? If so, I really do think you need help.

It's called "nature," Phil. Who would you sue if a tree branch fell on you while walking through the woods? If there were medical expenses involved, you would pay them yourself. Why should it be any different for a tree located in town? I know we ask a lot from the government, but I sincerely think asking them to be "mother nature" is taking things a bit too far.

But, in the end, this really wasn't a government versus that lady issue. The residents of that town had to pay for that lawsuit in the form of increased insurance rates. What did the residents do to deserve that? As a resident, she didn't say anything about the tree until she realized that she could make money. The same with her lawyer.

Not at all, Len; if I had special ability, I would have said "We will see..."

>How has it been determined that Technician class licensees
>"never became active as hams?" Or that they will "not renew
>their licenses?

The basis for my speculation is anecdotal. Of the hams I have seen go through local classes, some of them become active in the local clubs, while others are never heard on the air. Some of them are certainly not active; it is a matter of speculation as to how many.

> If there is any validity to the claim that Techs will all fail to renew

I must have missed that claim. Can you repost it so I can take issue with the poster?

>Which class are "these hams [that] were lost?"

I think that was pretty clear from context, but if not, I was saying that those Tech licencees who became licensed but never became active and will not renew were lost as much as 10 years ago.

>What about the 18,391 licensees who did not renew between
>Mar 1998 and Mar 2000 that were NOT technician class?

Yes, those are lost to us, too, Len.

> That's not a "finger in the wind," it is merely a "salute." :-)

Then allow me to salute you, too. :-)

Even if I felt that Morse code testing were an unecessary barrier, if I wanted to be licensed, I would learn the code, meet the requirements then do whatever I darn well pleased in ham radio. I don't think that code is a barrier for most.

What I do believe it to be is an unecessary requirement in today's radio age. There are some questions on the Extra exam about Lissajous figures; they are not a barrier because the concept is easily learned, but in today's age, I don't think they are a necessary part of the test.

>From: Tim Randa randas@mindspring.com

>#3. You can hold your breath and wait for the code requirement to go away.

>I recommend number 3

Have you decided that you don't want to see him become a ham?

Leo, there is a good possibility that amateur HF access will be granted eventually without a code test. Waiting is an option, but that will take years off of the fun you could have in ham radio.

Most folks can learn the code to 5 wpm in a few weeks at about a half-hour a day, and once you do, with your qualifications, you will probably be an Extra pretty quickly. It really is worth not waiting, especially with the sunspots expected to be so good over the coming few years.

Once you pass the test, if you wish, you can have a code-key-burying cermony in your back yard, surrounded by all of your friends, but I would encourage you to try the mode from time to time. I did, and found that I absolutely enjoy it.

I also encourage you to become licensed as a Tech right now. There really is more to that class of license than FM on a local repeater. You have access to lots of spectrum and can do some interesting things with satellite, earth-moon-earth communication, meteor scatter, SSB and CW over hundreds of miles, various digital modes, etc. A couple of hams recently did a 2-way 5-watt moonbounce QSO using 12-foot home satellite dishes, using a multitone digital mode and long-term integration techniques. Cool. From there, if the allure of HF is what attracts you to radio, the code test will not seem like such a large jump. Even if I had not found myself really enjoying CW operation after a while, I think the prize would have been worth not waiting.

Good luck.

It was the ARRL who said Ham Radio was in big trouble and it was the ARRL who decided that all kinds of programs should be invoked in order to spurt growth. The whole problem is not with Ham Radio being slow, its more of a problem of how it feeds the cash cows. Amateur Radio was doing just fine. I bet the ARRL's annual growth figures show a lot more than a 1 % growth, which is not bad for a feable and almost stagnent 1% percent Ham Radio growth. The whole problem is trying to run a magazine publishing buisness, and all the other related buisness at the expence of Amateur Radio has become a dangerous set of circumstances. I like the term of the tale wagging the dog. If there was ever a reciepe for the destruction of Ham Radio, weve got it. Don't get me wrong, if there can be a buck made all well and good, but lets not try to ruin a good thing to do it. J1

Dunno abt that either, Tom. I've had some fun learning over the years

The huge difference between yesteryear and today and what attracted
kids to techo pastimes back then vs. now is the availability of the
family computer(s) today which didn't exist back then.

Happens very rarely out there in reality. The only place those kinds
of remarks are made in any volume is right here in rrap. Which ain't
reality.
>
> If you consider that the entry-level HF license is now the

Disagree, Ed. The Novice bands are intentionally positioned to isolate
Novices from the lower ends of the bands where most of the operating
is done and has been done going 'way back. The net effect is that a
Novice had to get a General to get into the HF mainstream back when
just like any Tech does today.
>
Novices were far more restricted wrt to overall priveleges than are
either flavor of Tech today. The Novice ticket was no "gift" at all.
Considering that vhf/uhf ham radio barely existed then kids had no
choice but to become Novices if they wanted to get into ham radio.
>

Yeah, and today they do it in chat rooms and with instant messaging
and they don't have to build anything or put up any antennas in their
cc&r laced back yards.
>

>
The "wall to wall" entry-level signals have moved up the spectrum to
the machines. I daresay that if we could hear all the machines within
say a thousand mile radius like we could hear Novices on 7.180 back
when I'm convinced that we'd hear a tower of babble that would make
the entry-level activity on the old Novice bands sound pale in
comparison.
>
Bottom line here is that comparing ham radio from back when to the ham
radio of today is getting to be pretty much a stretch particularly
with respect to the incentives kids have to get into ham radio today
and the modes which light their fires.

C'mon Ed! Ever since the Tech license was created in 1951 there has
been a divide within ham radio: Some of us only care abt HF, others
only care abt vhf/uhf. A few do both in depth. Every ham out there has
his own interpretation of what constitutes "excitement".
>
I'm an HFer to the core, the only aspect of vhf/uhf I care abt is
being able to use the 2m machines as neighborhod intercoms and a bit
of packet dx spots. I have no clue what the fuss abt APRS is about,
who cares where the other guy is at the moment?? Well some guys do
care and I ain't gonna bash it. Conversley they don't give a rat's
patooie abt me working VKs on 80m, yadda, yadda.

Yeah I know. I remember a while back some kid was asking about getting an amplifier, on the vhf-uhf news group, to use with his FRS radio so he could talk with his buddy on the other side of town. I wonder where he got that idea from.

The problem with MURS radios is you can use a modified 2m rig for more power. Then when the 5 channels get too busy then drop down to the 2m band. When the average CBer discovers he can talk all over town by jumping on the local repeater then the problem gets serious.

I don't hear hardly any activity on the 5 MURS frequencies yet. I suspect when the likes of Radio Shack starts pushing MURS radios the word will get out. With the higher power available (2w ERIP) and external antennas people will discover it's a better deal than the FRS radio. That will be of particular interest to people wanting mobile communications without the big antennas, and the current crap you hear on 11m.

> As far as business band, I assume true business owners will switch to

The Michigan state Police just went digital, and a number of other local cities are doing the same. If MURS get "popular" then more of the business frequencies may get turned over to MURS so there may not be much choice.

One can hope that will happen.

It follows then that you would like to decrease the alcohol problem
by criminalizing the drug that is alcohol. Nothing's perfect, Dwight.
Legalized drugs would result in fewer problems than we have now.
We apparently didn't learn a thing from prohibition.

> I'm aware of so-called "medical" marijuana. However, I agree with

> by those who want drugs legalized.

Wait until you can't keep anything down unless you smoke marijuana and
you will, no doubt, change your tune. Who cares if someone else is
suffering, eh, Dwight? If it's not Dwight suffering, then the
suffering doesn't matter?

> ... alcohol has nothing to do with drug legalization either.

Huh????? Alcohol is a legal drug. It has everything to do with
drug legalization.

>   Cecil, we've already talked about this. The effects of illegal
> drugs goes far beyond your life or your living room. Therefore, this

> That is really sick, Cecil. Obviously, you'll say anything, attack
> anybody, in defense of your darn drugs. Are they really that
> important to you? If so, I really do think you need help.

The story is absolutely true, Dwight. Check it out for yourself. Members of the LA County sheriff's office murdered a private citizen in order to confiscate his possessions under the RICO(sp?) laws. This was covered on "Investigative Reports" on one of the cable channels.

You forget that the firing squad gets paid too. Do you remember the Gilmore
case many years ago?

You mean like put it on "Pay-Per-View" cable TV? Then the state gets a cut of the proceeds. Hummmm..... Who would admit to actually watching the "show"?

Additionally, there is a great deal of older (pre-digital frequency
synthesis) that can be used for illegal operation with NO
modifications at all.  Even newer rigs can be EASILY
modified to operate outside ham frequencies yet have NO
external indicatins that "the diode was clipped" to
allow non-ham frequency transmission.

The local enforcements could never be totally onboard as
to all the equipment that, while legal in one service, can
be illegally used on other frequencies.

Cheers,
Bill K2UNK

Cecil,
OWNERSHIP of ham gear, even if not a ham, is NOT illegal.

 You probably read something by Stew Teaze where he proposed such a "new
ham band" to the FCC. They have already turned thumbs down on it.

 - or is this a possable setup

But Tom! ED Hare insists that people only get into ham radio because
they WANT to learn this old hard technical stuff! They NEVER just
memorize nor word associate their way through the tests (the few who are
actually taking tests).

There is a pecking order even in a prison. A child molester often has to be placed in a more secured section to keep the other prisoners from killing them. Remember that many prisoners have kids too, and they don't like child molesters. I remember a while back here in Michigan a guy was found guilty of molesting some kids and went to prison. It was in the news for a few weeks. Shortly after getting there somebody, in the prison, put a contract on his life. I found this all out because my ex-wife worked at the county jail for a while, and she spoke to the officers in charge of running the prisoners between the jail and the prison. In Timothy McVeigh's case I think he would find himself in the same position as the child molester so I doubt he would live all that long in prison before somebody killed him.

That's the homemade lawyer in you. YOU have decided that the case cited was to the point.

Discussing is one thing, Larry. You don't discuss. You make outlandish statements and for your proof, you quote a dictionary of legal terms which you found somewhere or quote chapter and verse from previous FCC cases which may or may not have bearing on the issue at hand.

...because YOU have decided that two are not necessary, not in the public interest and not in conformity with the law. I'll wager that there are thousands who would not only disagree with you but who would say that you don't know what you are talking about. My view is that your ideas have been formed through a lack of information or through misinterpretation or misunderstanding of the information available.

> Dave, you offer no defense of these policies or rules, so what your
> point?

I'm not here to discuss U.S. drug enforcement policy and my views on the retention of morse testing are already known here. They are at odds with yours. I don't quote the law in efforts to make a square peg fit into a round hole. My point was that it was in extremely poor taste for you to have used the shoot down incident to further your anti-morse code testing agenda.

Both are wrong?  There are countless wrongs in this world Larry.  The
Palestinian-Israeli conflict is wrong.  The ethnic cleansing in Kosovo
was wrong.  The costs for health care in America are wrong. Your silly
morse testing problem not only pales in comparison to the wrongs in the
world, you haven't even established that it is wrong.  You've got a
personal problem with morse code, Larry.

You, Larry Klose, posted the material equating two incidents. Now you
look like an even bigger fool for trying to defend your action.

>And who appointed you the county branch of the FCC -- just another
>self-important wannabe radio cop!

It's a practice I am sure you are unfamiliar with, Hansel...it's called "Professional Courtesy".

A REAL "radio cop" could have simply forward a letter to the FCC with a "cc" to the County Commissioners, the County Executive Officer and the Sheriff. This would have put the easiest and least expensive fix out of option and created REAL animosity.

But just as they have exended ME the courtesy of a "warning" when I was travelling a "bit too fast", I pointed out thier errant operation at the least complicated level...personal contact. They fixed it. No fuss, no muss, and I slowed down on that particular stretch of road...everyone is happy.

>I bet they can hardly wait for you to come flashing your charts and your
>radio-cop badge again and tell them how to run their department!

Even a retired Sailor can (I assume) appreciate having a potentially expensive error addressed to you in private and "unofficially", rather than having it brought to your attention through official federal, and hence recordable, avenues.

Do you have a problem with a citizen interacting with local law enforcement when they see what they know to be an unlawful act being perpetuated by that agency, Hans?

Or was it because it was a RADIO issue you think it wasn't necessary to tell them of thier error? "The Lesser Of Many Evils" concept? (More like "Bury My Head Deeper In The Sand" syndrome on YOUR part, I think)

Was it "OK" for them (the Sheriff's department) to continue to TELL and THREATEN >>LICENSED<< users of the frequency that thier operation might subject them to arrest and to cease?

Actually, I just think you are very lonely and depressed and have nothing better to do than agitate and insinuate...Just like Lennie. Matter of fact, EXACTLY like Lennie.

No "73" for Hans. He's being mean again.

Not wishing to appear to appear to be suggesting any form of censorship, may I respectfully suggest that the present on-going threads that refer to the recently killed missionary be cut-and-pasted to a new thread title?

None of the on-going threads have any pertinence to her or her tragic death or the death of her infant daughter, and I think it would be an act of respect to stop posting to threads that would seem to be discussing THEM...NOT the code/FCC/ITU debates that it has

Respectfully,

Steve, K4YZ

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Steve Robeson LPN says:

> it's called "Professional Courtesy".

ROTFLMAO!!!! You're not a "professional" -- you're an "amateur" and a radio cop wannabe. Do you have one of those "radio badges" they used to sell in the back pages of "CQ" to pin on your blue coveralls with the US flag on the shoulder and your call embroidered above the pocket? 10-4?

Hans

Steve Robeson LPN:

> Ever seen a grain elevator explode? You can't put wheat in your gas tank,
> but it sure enough CAN explode.

Wrong again, Steve.

Elevator explosions are caused by exploding dust, not by exploding wheat.

Good luck on this one now!

Hans

Am I? Again, libertarian justification, "I'm not REALLY contributing with my occasional one joint." If there was no market then none of those things would happen. You clear your conscience by the miniscule amount of joints you smoke compared to the total market. Yes, you are myopic. It may not be your fault that people are dying so that you can have a moment of pleasure but you share in the responsibility for their death whether you choose to or not.

On Tue, 01 May 2001 03:21:57 -0400, Dwight Stewart wrote:

> As I understand it, the insurance company did eventually pay (and raised it's rates in the process). Because of that (more lawsuits and still higher insurance rates), the city made sure nothing like this would happen again. Two months after the lawsuit ended, they started cutting down every single tree on public property throughout the city. And, to this day, there is not a single tree on public property in that town that is taller than six feet.

If they would have done that while the claim was pending, it would be admissable as evidence that the city knew that there were problems.....

> And, to be perfectly honest with you, Phil, when they cut down that beautiful Oak tree in the park across the street, I would have paid money to get at that woman and her attorney. Of course, I would have had to stand in line - most of the residents were mad as hell at those two.

Why not be mad at the doctors and hospitals who billed her for their fees...they would have jumped into the case as well because of subrogation (in return for their providing services, you grant them the right to recover those expenses on your behalf).

A classmate of mine was involved in a case where a taxi driver pinned a robber to the wall with his cab until the cops arrived. The taxi company was sued - and lost - for damages in the vicinity of $45,000, which is what the City and County Health Services claimed was its expenses for medical care in putting the robber back together again.

> It is exactly this type of lawsuit that makes people so angry at lawyers.

In those situations who is supposed to pay the medical bills?

Fortunately my medical insurance plan covers full expenses for injuries of any type, but if they smell on-the-job or third-party liabilities, they're right there with subrogated claims.

>There is no possible way to maintain a tree so that a limb
>cannot possibly fall off.

The "what is required of the reasonable defendant" theory
applies.

>Therefore, to avoid a BS lawsuit like this,
>the only option is to cut down every single tree.

Bad choice. What would have been required is an inspection of
every tree to determine their safety and propensity for damage,
and remedial tree-work as necessary. Probably cost more than
the tree-ectomy, though.

And if the city would have had warning of this possibly happening -
such as prior claims for damages from errant tree limbs - its
failure to take adequate protection is grounds for punitive damages
as well.

>What a crappy world
>>we would live in if we made it impervious to the lawsuits of lawyers.
>Sorry, but I would rather get rid of the lawyers instead.

To each his own......

it is warm not hot. You can pick it up with a pair of work gloves. ASnd those work gloves won't ignite! they won't even singe. cs ((o-Chlorobenzylidene)malononitrile) is not flamable. To burn it would need to be oxidized (a little high school chemistry would help you out here ...) regardless of concentration it will not burn.

Your analogy of the grain elevator is notanalogous to thissituation in that wheat burns, it will "explode" (a violent redox reaction) occurs when the wheat is at a concentration with the oxidation such that it will react quickly. cs on the other hand will never react violently in air.

I've got to ask.  What kind of 'dust' do you think one might ordinarily
find in a grain elevator with a lot of wheat in it?

Here's a thought - maybe the person for whom the services are being
rendered should pay the bills.

I guess that'll never fly.

>wannabe.

Hansel, Hansel, Hansel....

Was ANY of the information that I stated incorrect?

If challenged by the FCC, would they NOT be (potentially) liable for NAL's for improper and unlicensed operation? (And as a local resident, those "fines" would have been paid with MY taxes, ergo it IS "my business")

Do you assert that my suggestions that it is NOT a citizens right to redress improper conduct to the agency concerned? (As a local resident, the professioanl reputation and proper conduct of MY Sheriff's Deaprtment IS "my business")

With many other posters I would await a reasonable response. However, this is YOU, and you have proven beyond any reasonable doubt that any response will be in THIS genre. Lennie did it and I fell prey to his shennanigans.

I used to hold you in some respect simply by virtue of your previous service in the Navy. Not that I am worried about what YOU think any more, but that is gone.

You "twist my tail" about my jabs at Lennie's rhetoric, but then you go right ahead and do the very same thing yourself. More "Do As I Say...Not Do What I Do" philosophy.

Very chic. Very professional.

The lack of a "paycheck" for what I do may grant me "amateur" status, Hansel, but it does NOT mean I cannot do what I do in a "professional" manner.

That YOU may not agree does not concern me. That I DID gain the respect of the local agencies both for my knowledge of those regulations AND a willingness to handle this at the lowest common denominator DOES.

It makes my "job" as a local ARRL EC so much easier.

A simple yes or no, as difficult as it may be for you, will suffice.

Steve

The *volunteer* fire and rescue folks in out rural county recently held a meeting to discuss what could/should be done to integrate amateur radio into their emergency/disaster plans. Rep's from both ARES and RACES both attended but sadly got into such a heated arguement that neither my wife and I nor the fire & rescue people were able to make any sense out of their proposals. The only thing they agreed on was that the 50-odd hams in the county who were not in one or the other organization were neither real hams nor people who could be trusted "to obey their rules". The one group (RACES?) said they were (once?) a federally sponsored corp. and would flood the county with outside volunteers provided the county agreed to their disaster plans for us, just before half of them left to protest the other group's "lies". The second group (ARES) seemed to loose interest after finding that we had no repeaters in the county they could comandeer for emergency drills. The county officials, hearing this, decided "none of the above" and have pretty much given up on amateur radio.

OTOH, I have heard so many good things said that I hate to give up. What's the story guys?

>Wrong again, Steve.

>Elevator explosions are caused by exploding dust, not by exploding wheat.

Filled, primarily, with wheat. The dust is created by the chaff. Is this incorrect? Can you DISprove that dust created by wheat chaff is the culprit, Hansel?

>Good luck on this one now!

Good luck to you. I dare say your efforts to avoid the above response will be more problematic than my proving my point.

Did I cite EVERY possible form of grain that can casue this...? No.

Was my answer incorrect? No.

Can a hot CS cannister ingnite a fire? Yes. It has happened on numerous occassions. Ask any law enforcement agency.

Back to trolling for you, Hansel.

You are doing your darnedest to be cute, Hansel, but you are just being foolish.

Is that a Minnesota thing, or are ALL retired sailors this inadequate? I note this in as much as you have repeatedly DENIED any interservice rivalry between sailors and Marines, yet you change the subject thread to one that is certainly instigating.

More "Do What I Say, Not Do What I Do", Hans?

Grain dust. Legume dust. Saflour dust. All sorts of explosive dust.

Nice try, but sorry, no exploding wheat, and no exploding CS either.

The ignorant might be surprised to learn that all the major cigarette
companies have copyrighted their own names for marijuana cigarettes
in anticipation of the inevitable time when the feds legalize marijuana
(again). What, you didn't know it was legal for more than a century?

>it is warm not hot. You can pick it up with a pair of work gloves.

If it's hot enough to require gloves to pick up, it is hot enough in amny cases to initiate combustion.

>ASnd those work gloves won't ignite! they won't even singe.

Next time I consider doing some act which might potentially induce local law enforcement or the Armed Forces to hurl a CS canister into my house, I will remember to have a pair of those gloves handy, Rob.

>To burn it would need to be oxidized

If it is getting hot, it is already oxidizing. And just in case, I will remember to be in an air-tight room when that CS is activated.

>(a little high school chemistry would help you out here ...) regardless of concentration it will not burn.

Fire requires three elements to occur...Oxygen, Fuel and a heat source.

We live in an enviroment that provides approximately 21% oxygen in most concentrations. (less in Los Angeles, New York and obviously some Canadian provinces.) In most cases, this is sufficent to support combustion.

Secondly, we live in an enviroment that provides MORE than adequate sources of combustion. Papers, trash, curtains, clothing, etc are NOT safe from fire.

Lastly, a CS can gets more than sufficiently hot enough to ignite certain materials. It's happened before...it WILL happen again.

>Your analogy of the grain elevator is notanalogous to thissituation in that
>wheat burns, it will "explode" (a violent redox reaction) occurs when the
>wheat is at a concentration with the oxidation such that it will react
>quickly.

Sure it is. You just wish to dismiss it in support of your tirade. No problem. Carry on.

>cs on the other hand will never react violently in air.

However certain Canadian rent-a-cops in between real jobs WILL react violently when their rants are derailed.

See ya

Steve

If you walk like a liberal and quack like a liberal, Dick, what other conclusion can I draw? Liberals love affirmative action programs. You love affirmative action programs for Morse code. In my book, that

makes you a liberal (or possibly a fascist which is even worse).

Spoken like a true liberal, Dick. Liberals don't believe in personal responsibility. They believe the government is responsible for protecting people from themselves. You have just shown your true colors and I am very disappointed. Given your above attitudes, for the sake of consistency, you must believe that citizens must be protected from themselves as far as guns go, by the feds.

Don't know what CS is - or whether it explodes or not.  But I do know
that grain dust explodes.  Or are you claiming there's gasoline or
something in grain elevators?

There's a moral there. Don't leave enough to be put back together.
How does an individual live rationally in an irrational society?

>>ROTFLMAO!!!! You're not a "professional" -- you're an "amateur" and a radio
>>cop wannabe.

>
> Was ANY of the information that I stated incorrect?
>

Yes. The statment "it's called Professional Courtesy" is flatly incorrect.

Professional Courtesy is a specific term for a free or reduced price service performed by a professional person (ie., Medical Doctor, Attorney, etc.) for another person in the same profession for which he would otherwise charge a fee to the general public. For example, a dentist might treat the spouse or children of other dentists for free or at a reduced rate as a professional courtesy.

By definition, an "amateur" cannot extend a "professional courtesy".

Good luck on this one now!

Hans

As usual, your phase is 180 degrees away from my meaning which is:

Since there are twice as many heterosexual child molesters as
homosexual child molesters, be very careful with your little
girls. Why would you want me not to be careful with my little
girls, Dick? I think I understand where you're coming from.

>incorrect?

Yes, that is incorrect.

The chaff stays in the field and never goes to the elevator, thus it is not the source of the elevator dust explosion.

Regardless of the source of the dust, the explosion is exploding DUST, not exploding WHEAT as you stated. Sorry, Steve, but there is no wiggle-room for you here. You were simply wrong when you talked of exploding wheat.

Good luck on this one now!

```

Jim Kelley axed me:

>But I do know that grain dust explodes.

You are exactly correct. That is also my claim.

Steve Robeson LPN, on the other hand, stated that exploding wheat causes the disaster, a statement which is simply incorrect.

>Or are you claiming there's gasoline or something in grain elevators?

Nope.

73, Hans, K0HB

True that there is no PROPER equipment in both services, but if one were to
follow Dwight Stewart's suggestion, a majority of amateur 10m rigs would be on

his proposed "illegal CB equipment list." In such a situation, what is a cop going to do: See the radio on the list and arrest, or see the radio on the list and KNOW that it could be used in a licensed service and do nothing (or nothing more than inquire)? I'm willing to bet the former outcome more likely.

With HR-2346 becomming law, just why do you say that it's not "local deputy Barney Fife['s]" responsibility? Isn't that exactly what the federal law now permits - local enforcement.... If he can't tell the difference between CB (which he may now enforce, provided the supplemental legislation is passed) and amateur, you should care.

> If it's hot enough to require gloves to pick up, it is hot enough in amny
> cases to initiate combustion.

The canister is about 60-70c after it has been fired. The heat is caused by the charge that fires it not by the gas. Thats about the same temperature as water coming from a hot water heater ... they certainly don't catch fire in normal use.

> Next time I consider doing some act which might potentially induce local
> law enforcement or the Armed Forces to hurl a CS canister into my house, I will
> remember to have a pair of those gloves handy, Rob.

You'd have to be an idiot to do anything that would require them to anyways ... but then again you have already given proof that you are silly enough to do so.

> If it is getting hot, it is already oxidizing. And just in case, I will
> remember to be in an air-tight room when that CS is activated.

cs isn't activated ... it evaporates ... and as you should know ... thats an endothermic reaction (takes in heat not gives it up). Oxidizing occurs when a material loses an electron to the other material. Not all hot objects do this ... especially not at 70c

> Fire requires three elements to occur...Oxygen, Fuel and a heat source.

70c isn't enough to ignite anything in your house.

> We live in an enviroment that provides approximately 21% oxygen in
most
> concentrations. (less in Los Angeles, New York and obviously some Canadian
> provinces.) In most cases, this is sufficent to support combustion.

Most certainly ... but you still need the heat requirement.

> Secondly, we live in an enviroment that provides MORE than adequate
> sources of combustion. Papers, trash, curtains, clothing, etc are NOT
safe
> from fire.

All those will burn ... but again not at 70c.

> Lastly, a CS can gets more than sufficiently hot enough to ignite
certain
> materials. It's happened before...it WILL happen again.

I have used cs before (cn would be better for a building but the argument
was about cs). And trust me ... unless you fire it right into a pool of gas
a couple feet away (such that the fuel used as a propellant would still be
burning) it won't ignite anything. Cite me a proof that it has ... and
something more credible than jsut "I said so".

> Sure it is. You just wish to dismiss it in support of your tirade.
No
> problem. Carry on.

Grain elevators explode because they have a volatile concentration of the
powder from the grain and oxygen. This is subsequently ignited by a heat
source sufficient enough that it provides the energy to start the exothermic
reaction. This exothermic reaction then ignites further material rapidly as
the surface area of the reaction increases with the surface area of the
sphere from the ignition point.

> However certain Canadian rent-a-cops in between real jobs WILL react
> violently when their rants are derailed.

I actually started school again today ... so go right ahead and insult the
security field all you want.

Simple:

RACES: A once FCC licensed [sub- or overlapping] service, comprised of civil defense officials and amateur radio operators, recently eliminated at the same time as the amateur radio rules restructuring that took place on April 15, 2000. Existing licensees can continue to operate witin the terms of their licenses until expiration, whereby they will not be renewed.

ARES: The ARRL's delusion of an "emergency service" that carries no weight or authority whatsoever with regard to any law, rule, or regulation at any level of government. Although individuals participating in ARES are licensed amateurs, there is no additional licensing such as in RACES, nor is there any government sanctioned tie-in to the civil defense infrastructure.

I haven't been following the discussion but it seems to me the cop could
do the same thing as he does if he discovers someone carrying a gun.

In a grocery store, a cop walks up to me and asks, "Are you carrying
a handgun?" I say, yes, and I have a permit. He asks to see the permit
and suggests that I keep it better concealed. Without the permit, I
would have been arrested.

Why can't the same conditions apply? Without an FCC license, the operator
of the equipment on the list probably should be arrested.

Nope, he's claiming that there may be something besides "wheat" dust
in a "grain" elevator. Did you ever put corn starch in a drinking straw
and blow it at a candle?

It's more likely that one would be thrown against the nearest wall, frisked,
have the gun taken, then have it returned when a valid permit to CCW is
discovered. Since there's a safety issue here, a police officer is going to be
more concerned about his own safety than in the rights of the suspect, even if
there is no actual violation or arrest.

Stop dreaming and come and join us in the real world.

The punishment he would have got would not have been one handed out by a
court, but by his fellow prisoners.

Maybe my perspective is different from yours. I'm 6'4" and weigh
215 lbs, fairly imposing for most cops, who are required by reality
to consider physical size before trying to throw anybody against the
nearest wall. How about you?

I doubt he would even have lasted a year so the cost would have been less.
By the way do you know what it costs the state to "properly" conduct an
execution?

 Because they are bored or just plain pulling our legs. The hobby
isn't dying at all. Period. A 1% increase doesn't mean the hobby is
dying.  Some people just like to shovel S**T I guess....

The key word is, as you state: USING.  How does the cop
know anyoe is using any radio (as opposed to merely
owning and listening)?

Cheers,
Bill K2UNK

Bill, "operator" implies transmitting.

This is a sad and tragic example of where ham's "personal" attitudes stand in the way of doing something beneficial.
If you want to continue to pursue this, I'd suggest the following two options:

1. Try to get the key individuals from both ARES and RACES together outside the contact with the county officials and then (if that happens) reapproach the county as a unified entity.

2. Work with the county directly (yourself and other hams willing to do so) without any reliance on ARES or RACES. Neither ARES nor RACES has any "turf guarantee" regarding their organizations being used and/or recognized on individual county efforts.

Cheers,
Bill K2UNK

Absolutely. Tuck a copy of yer ham license into the glove compartment
along with highlighted copies of the applicable federal regs and doan
worry about it. No cop in his right mind will seriously hassle
somebody waving papers with the FCC seal on 'em and with a name &
address which match the driver's license info. Unless they're nutcases
or kids right out of the academy they're always looking for good
excuses to get disengaged from mindless chicken-shit like pinching
radioheads.
>
Mobile scanners and radar detectors have been "illegal" in Connecticut
and Virginia for decades. I have yet to hear of a ham who got really
hassled  in either of those states for having a scanning vhf/uhf xcvr
aboard the vehicle.

I have a factory-stock unmodified FCC type accepted Kenwood TS-50 and
it will transmit well down into the 27Mhz CB band and it also squirts
it's full 100w on 6900Khz which might eventually become the new lower
band edge of the 40m ham band. Beats me . .

Yup. There has been a surge in the number of Techs over the past year, put that is due in part to the FCC renewing Tech Pluses as Techs after April 15, 2000.

>That's why Kenwood pushed the FCC so hard. $$$$$

Bingo.
>
>Didn't work.
>
Too soon to tell, I'd say.

>We created a no-code tech because it was going to be "the answer",

>know about 30 people who received no-codes...only two remain active.
>One is a 13 WPM General, and the other is a wife who uses the radio to
>talk to her husband.
>
My experience has been quite different. I know many post-1991 Techs who are very active.

But if you look at the growth of the ARS in the USA in the decade before 1991, and compare it to the decade since 1991, you will NOT see any lasting surge of newcomers in the latter decade.

>At MFJ, where the people work with radios, over a dozen people became
>no-code hams. Of those, only one is active.

Busman's holiday, probably.
>
>I would think if CW was a barrier, there would have been a steady
>stream of no-coders entering the door. Not a big shot that tapered to
>nothing. It would seem logical that a reduction from 13 WPM to 5 WPM
>for HF operation would have a large impact on newcomers...yet it
>didn't.

True. Several reasons:

1) Lotsa folks don't know about the changes

2) Most folks aren't interested, even if you eliminated all tests and gave the gear away.

3) Many folks think they don't have the time, money, or resources (like antenna space) to do ham radio.
>
>I wopuld think the no-code class would be a hit, didn't happen.

It was as much of a hit as its predecessor.
>

>Umm, no code has been available for a long time. It hasn't worked so

>nothing happens except problems. Do you suppose we can put it back
>later?

Double bingo. No way. The FCC has said for over a decade that they think the
code test only indicates code ability, nothing more or less. The ONLY reason
the FCC kept 5 wpm was because of the international treaty requirement.

Like it or not, the FCC's hands are tied on this. It's 5 wpm till the treaty
changes.
>
>Have you know anything that was deregulated or opened-up that became
>more orderly?

Nope.

Because of the original complaint, of course, which drew the attention
of the local cop in the first place. Example: My neighbor calls the cops
and says my high-power CB is knocking out their TV. Cop shows up at my
door. I present my federal ARS license along with Part 97 stating that
I'm legally allowed to run high power.

>

>Not at all, Len; if I had special ability, I would have said "We will see..."

Not necessary. Those of "special ability" may use the royal
we and put themselves in a place of Authority and Judgement
on lesser beings. Others do it in here on a regular basis.

>>How has it been determined that Technician class licensees
>>"never became active as hams?" Or that they will "not renew
>>their licenses?
>
>The basis for my speculation is anecdotal.

Ah, understand. Having an amateur license makes all anecdotes
"factual" while those who do not have amateur licenses are not
factual. [that fits the pattern]

>Of the hams I have seen go through
>local classes, some of them become active in the local clubs, while others
>are never heard on the air. Some of them are certainly not active; it is a
>matter of speculation as to how many.

[on Technician class] "...are never heard on the air."

Technician class licensees without any code test are relegated to
VHF and above bands. Radio propagation characteristics at VHF
and above is basically line-of-sight. While there exist ducting
effects and tropospheric scatter long-distance effects, it is difficult
for New England amateurs to hear Techs-without-code-tests
transmitting from, say, the northwestern USA.

>
>> If there is any validity to the claim that Techs will all fail to renew
>
>I must have missed that claim. Can you repost it so I can take issue with
>the poster?

Here is what poster Hare wrote:

"A 1% decrease wouldn't mean the hobby is dying, either. I expect to see some
decrease as the many Techs who became licensed when the no-code Tech license
was introduced, but never became active as hams, do not renew their licenses.
The numbers will drop, maybe as much as 20%, by my finger in the wind."

In order to reach an "as much as 20%" *ALL* renewing Techs
will have to fail to renew...plus some more.

Considering the 10-year time period of all licenses and that the
no-code-test Technician class was created about 10 years ago,
no more than 10% drop could be expected in the next year if,
and only if, all renewable Techs failed to renew.

There seems to be a fair number of persons here wearing blinders
as to the number of Technician class licensees and the growth
of that class since the beginning.

Poster Hare will have to have some talking to...

>>Which class are "these hams [that] were lost?"
>
>I think that was pretty clear from context, but if not, I was saying that
>those Tech licencees who became licensed but never became active and will not
>renew were lost as much as 10 years ago.

That is still speculation, a personal viewpoint. There is no factual
basis for that

>>What about the 18,391 licensees who did not renew between
>>Mar 1998 and Mar 2000 that were NOT technician class?
>
>Yes, those are lost to us, too, Len.

Those are not "lost" to me or many hundreds of thousands of
others. If anything, it will mean more call signs available
under the Vanity Call regulations. :-)

So...there is nothing detectable in the number of 18,391 "lost"
amateurs relative to the 21,408 *new* Technician class
licensees between end of March 1998 and end of March 2000?
The difference between those two numbers is exactly the
growth in total US ARS licensees in the same period.

Over 200 Thousand new licensees were added to the US ARS
as a result of R&O 90-43 ten years ago.

Without those no-code-test Technician class licensees the US
ARS numbers would be dropping.

>That's why Kenwood pushed the FCC so hard. $$$$$
>
>Didn't work.

Kenwood did not "push the FCC" harder than anyone else
commenting on NPRM 98-143. All the documentation
(over 2600 Comments) on that NPRM is public record, including
Comments from Kenwood.

Some of the "other" manufacturers who were not "pushing hard:"
ICOM, Yaesu, JRC, SGC, Ten-Tec, Elecraft, etc., etc., etc.
All of those sell equipment on the amateur radio consumer
market.

>We created a no-code tech because it was going to be "the answer",
>yet many of them turned out to not have the faintest interest in the
>hobby.

There is a "poll" or questionaire result to confirm this? Did over
TWO HUNDRED THOUSAND individuals take the trouble to
pass a test for a license because they had "not the faintest
interest in the hobby?!?!?"

>Of those I know first hand, some never actually took the tests

...and that is an "authoritative" observation of the entire US ARS?!?

>At MFJ, where the people work with radios, over a dozen people became
>no-code hams. Of those, only one is active.

...and MFJ Company is some "bellweather" of US ARS activity?!?

>I would think if CW was a barrier, there would have been a steady
>stream of no-coders entering the door.

Over TWO HUNDRED THOUSAND "entered that door."

>I wopuld think the no-code class would be a hit, didn't happen.

By the end of approximately June 2001 (estimate), one in three US ARS licensees will be a no-code-test Technician class. At the end of March 2000, Technician class licensees were already 30 percent of the total licensees.

That R&O 90-43 is "not a hit" is like looking at the Grand Canyon and remarking "it's just a ditch made by water."

>Umm, no code has been available for a long time. It hasn't worked so
>far. Should we wait longer?

Ten years ago there were no no-code-test Technicians. A year ago there were over 200,000. Newcomers are going for the no-code-test Technician class far more than all the other classes combined, a trend started a decade ago and continuing on through the April 15, 2000, date.

>I'm not discrediting you, but there is nothing that has happened so
>far that indicates what you predict is true.

Rauch has demonstrated a remarkable blindness and delusion relative to publicly-known information.

>years off of the fun you could have in ham radio.

Some of the observed fun seen and heard OFF the computer:

1. Go to club meetings and be quiet so as to let all the "upgrades" tell ALL about radio...as if the only radio is amateur radio.

2. Listen to the QRN at some local HRO store or equivalent where customers and salesfolk exchange fish stories about rare DX...or hear "technical explanations" of radio which sound terribly close to pre-printed sales ad text from manufacturer's hand-outs.

3. See and hear how "vital" amateur communications is in times of emergency, especially when a viewer/listener is a veteran of public safety services and has already been through a major disaster where amateur radio played no noticeable role.

4. Observe "civilians" (the unlicensed in amateur radio) be disregarded as unlearned, unlicensed, unwashed and of a lowly caste barely able to be human...by those whose technical knowledge is based on memorizing the sales ads or reading letters to the editor in QST.

5. Being a part of the Elite who consider morse code mode skill as the pinnacle of amateur radio expertise and thus qualified by credentials in keeping the faith and mythos of morse code forever and ever.

6. Being a member of the True Hams who seldom, if ever, venture above 30 MHz (where 99+% of the ham bands are) and always talking down Technicians as unworthy, ignorant, and not of the True Faith.

7. Being a member of a group that NEVER questions rules or regulations unless they are spoken of by the ARRL because rules and regulations are LAW and cannot be changed. Ever. Unless the believer is grandfathered into some more prestigious class signifying greater self-importance through credentialism.

8. Be a member of an Elite group that has passed the TEST, an equivalent of a Nobel Prize achievement or cure for cancer or discovery of immortality, far and away better than any other possible test given by the federal government.

9. Above all, never express any thoughts of individual interest, fun of learning something new, or experiencing any personal achievements unless those things have already been stated or expressed in authoritative journals of hamdom as the "correct" ways to have fun.

>Most folks can learn the code to 5 wpm in a few weeks at about a half-hour a
>day, and once you do, with your qualifications, you will probably be an Extra

>expected to be so good over the coming few years.
>
> Once you pass the test, if you wish, you can have a code-key-burying cermony
>in your back yard, surrounded by all of your friends, but I would encourage
>you to try the mode from time to time.

So, it is a "necessity" to keep that code test for HF privileges in order to have "ceremonies" of burying the code key?

Of course it is "necessary" to learn the morse code. A code test is LAW and can never be broken since it is "established by international treaty!" After all, thousands upon thousands learned code and passed the test as is proven by all the licensee statistics. [there are no statistics showing the numbers who didn't take such a test, didn't want to, or could not pass it...they are unimportant to believers of the True Faith]

Harmony in All, Joy Forever as a result of passing a morse code test. Amen.

Fist off, they would need to use a fitting execution method, not the lame "just go to sleep now little boy" lethal injection. An execution should be punishment AND retribution if it is to have any real deterrent value. An electric chair or a Guillotine would guarantee incredible media market share.

As far as who would admit to watching the show, who cares as long as they watch (and the state makes it's money). But you know people would watch by the millions - just look at the popularity of all the "reality" and "WWF" type shows on the air today.

Obviously, not all of them. I would be inclined to think maybe 50%.

A private contract that a government agency is a party to is a far cry from a statutory provision providing for a similar relationship. In my area, the ARES structure is completely separate from government, or at best, is a volunteer situation, while RACES is not volunteer.

...And what you missed is that the cop isn't even going to bother with some such "nonsense" as a license and act anyway.....

...And as I have said, responses like this indicate what SHOULD happen in our perfect world, not what is most likely to happen. It's more likely that the cop will immediately restrain the person, take the weapon, find the CCW permit, and return both. There will be insufficent time to announce anything.

> Fist off, they would need to use a fitting execution method, not the lame "just go to sleep now little boy" lethal injection. An execution should be punishment AND retribution if it is to have any real deterrent value. An electric chair or a Guillotine would guarantee incredible media market share.

Well they could do what was done during the French revolution. Use a guillotine to chop off the head where you can see the blood pulsing out of the neck stump afterward. Then to just to make it clear to the victim, since the head would still be alive for a few seconds because you could see the eyes move back and forth, blink etc, they would pick up the head so the eyes could now view it's now headless body. They say you could see the look of horror in the face of the severed head until the brain died. You think that would work?

Another method would like was done in the old Soviet Union. A condemned prisoner would not have a fixed execution date. All the prisoner knew is by a certain date he was to be dead. So each time the cell door opened the prisoner was in terror not knowing if he was going to get his food or the revolver was going to be pressed against his head. It was up to the prison etc, when they got to "off" the condemned prisoner.

For media coverage they could have a show called "Execution TV" on "Pay-Per-View" with a PG-13 rating. That way somebody can make a few bucks off the weeks' "Featured Condemned Prisoner ". They could even find some tall blond, with big boobs, to pull the lever to increase market share.

Let's see. Below 30 MHz there's 10 meters, 12 meters, 15 meters, 17 meters, 20 meters, 30 meters, 40 meters, 80 meters, and 160 meters. That's nine bands. Nine is one percent of 900. So according to you, there are 900 ham bands above 30 MHz.

Oh, my, another instance of "special abilities" to divine what
others "would have done."  Remarkable.

Brakob is invited to prove that they would have done what he
said.

Lots and lots of luck on that one.

It will be needed.

```

>That's nine bands. Nine is one percent of 900. So according to you,
>there are 900 ham bands above 30 MHz.

Tsk, tsk, tsk, TSK!

There are 16 amateur radio bands above 30 MHz in Region 2,
allocated a total of 23,193 MHz spectrum space, exclusive of
the unallocated spectrum above 300 GHz..

There are 9 amateur radio bands below 30 MHz in Region 2,
allocated a total of 3.75 MHz spectrum space.

Total spectrum space allocated to Region 2 radio amateurs,
exclusive of frequencies above 300 GHz, is 23,196.75 MHz.

Percentage of spectrum space above 30 MHz allocated to
radio amateurs in Region 2 is 99.984 percent.

Learning to write applications using Visual <fill in language> is a
technical use of the computer. Using the family computer to web surf or
play a video game is not. Only a few of those thousand students in my high
school would have wanted to do the former; the other 998 would have done the
latter. We had plenty of distractions available in my wild youth, too, and
still a small percentage of us chose to become hams. Both Roy Sanden and I
are still active.

> >The rules have made the entry-level exams so much harder than they were
in those days,

Compared to my studing a 4-page study guide and memorizing 26 characters, 10
numbers and a few punctuations and prosigns? Quite a bit tougher, IMHO.

> >and at the same time some are telling all the youth that if they pass the
tests

Yes, but back then, there actually was significant activity on the Novice
segments. I bet if you tune the 80 meter Novice/Tech+ segment of the band

right now, you hear no more than 5 signals, and 3 of those will be Canadians
if you are in the Northeast.

Well, back then, there were 150,000 hams and there are 650,000 today. Seems
pretty odd that we have seen such an increase in what some claim no one is
doing.

> The "wall to wall" entry-level signals have moved up the spectrum to

Good point; I like it. But that tower of babble comes from all the hams
that some say are playing with computers instead of ham radio.

I don't think so. Did you really think that I was trying to make that point in my posts? It is necessary to pass the code test right now if he wants HF privleges because that is what the regulations require.

> Of course it is "necessary" to learn the morse code. A code

That seems to be the case, except I think you need to remove the word "never" from your post. The international treaty will be coming up for consideration relatively soon, I imagine.

> Harmony in All, Joy Forever as a result of passing a morse
> code test. Amen.

Bit too off the wall for me, Len. Enjoy.

Hans, The Lifeless states:

>"You can't put wheat in your gas tank, but it sure enough CAN explode."

>Good luck on this one now!   Bwahahahahahahahaha

Thanks, Hans. I guess you are even more boring and lifeless than I expected. Kinda boring up there in the great white north with nothing to do and no sex.

Guess it takes the load off of Mrs. Brakob, though...you pounding out "zingers" on RRAP instead of spending time with her.

Or perhaps you spend all that "retirement" time sitting around the old fireplace weaving together stories you ahve read in "Soldier of Fortune" and your exploits on RRAP to impress the old lady?

Making up for the things you DIDN'T do in the Navy?

Good luck on this one now!   BWAAAHAHAHAHAHAHAHAHAHA

By the way, Hansel...You have yet to answer the questions put to you about "Professional Courtesty".

Can't find the words to answer the questions honestly without completely humiliating yourself, or just the coward I expect you are!

A real "hero" on the keyboard, I see...As long as you are doing your best to elevate yourself at someone elses expense.

Just like Lennie.

Aren't YOU proud? The NEW Putz on the block. Now we have bookends.

See ya, Chief.

Okay, but I used the words "I" and "expect." In what way do you feel what
others say indicates a "tad of that special ability" in my posts?

> >>How has it been determined that Technician class licensees
> >>"never became active as hams?" Or that they will "not renew
> >>their licenses?

> >The basis for my speculation is anecdotal.

> Ah, understand. Having an amateur license makes all anecdotes

I wasn't trying to change the defintion of speculation or anecodtal, Len.
In what way do you feel I am fitting what pattern?

> >> If there is any validity to the claim that Techs will all fail to renew

> >I must have missed that claim. Can you repost it so I can take issue
with

Then my estimate was too high.

> Considering the 10-year time period of all licenses and that the
> no-code-test Technician class was created about 10 years ago,
> no more than 10% drop could be expected in the next year if,
> and only if, all renewable Techs failed to renew.

I will accept that as better-analyzed than my off-the-cuff estimate.

> >I think that was pretty clear from context, but if not, I was saying that
> >those Tech licencees who became licensed but never became active and will
not
> >renew were lost as much as 10 years ago.

> That is still speculation, a personal viewpoint.  There is no factual
> basis for that

I used the term "I think" to indicate that I was offering a personal
viewpoint.  No need to belabor the obvious. I am sure that some of the Techs
who became licensed but never active will renew.  Those that don't were lost
to ham radio as much as 10 years ago.

During one simulated alert in the Army we couldn't use the actual code
words of the day but I have not idea WHO came up with

'Pink Flamingos fly at night.'

It's just not NATURAL to wake up to someone saying that over the phone.

Xref: newsfeed.google.com rec.radio.amateur.policy:20814

Well...it appears that we have ANOTHER Lennie. And just like his mentor, he makes insulting and demeaning posts, yet when has his feet are held to the fire, he tries to "forget" the question put to him.

Well, Hansel, here they are. Are you man enough to answer them honestly and without your special blend of Andersonian wit?

The questions (abridged) were:

(1) Was the information incorrect?

(2) If left uncorrected, could NAL's have not been issued?

(3) Does a citizen NOT have the right to address irregularities in his/her local government (in this case, the sheriff's office)...???

Simple questions, Hansel...Study hard.

Subject: Re: Professional Courtesy

>> it's called "Professional Courtesy".

>ROTFLMAO!!!! You're not a "professional" -- you're an "amateur" and a radio
cop
>wannabe.

Hansel, Hansel, Hansel....

Was ANY of the information that I stated incorrect?

If challenged by the FCC, would they NOT be (potentially) liable for NAL's for improper and unlicensed operation? (And as a local resident, those "fines" would have been paid with MY taxes, ergo it IS "my business")

Do you assert that my suggestions that it is NOT a citizens right to redress improper conduct to the agency concerned? (As a local resident, the professioanl reputation and proper conduct of MY Sheriff's Deaprtment IS "my business")

With many other posters I would await a reasonable response. However, this is YOU, and you have proven beyond any reasonable doubt that any response will be in THIS genre. Lennie did it and I fell prey to his shennanigans.

I used to hold you in some respect simply by virtue of your previous service in the Navy. Not that I am worried about what YOU think any more, but that is gone.

You "twist my tail" about my jabs at Lennie's rhetoric, but then you go right ahead and do the very same thing yourself. More "Do As I Say...Not Do What I Do" philosophy.

Very chic. Very professional.

The lack of a "paycheck" for what I do may grant me "amateur" status, Hansel, but it does NOT mean I cannot do what I do in a "professional" manner.

That YOU may not agree does not concern me. That I DID gain the respect of the local agencies both for my knowledge of those regulations AND a willingness to handle this at the lowest common denominator DOES.

It makes my "job" as a local ARRL EC so much easier.

A simple yes or no, as difficult as it may be for you, will suffice.

So in other words, you were grossly inaccurate when you said that 99% of
the ham bands are above 30 MHz.  That's what I thought.

Ok, Mr. Letter of the Law.

And I bet you ALWAYS obey the maximum posted speed limit. If you wanted to speed, you would take the right approach to speeding legally - because, hey man, you do EVERYTHING right. You would put your mind to becoming a race car driver and do your speeding on the track where it belongs. You would follow the proper steps to becoming a race car driver:

1. Learn to ride a unicycle, because that's how it all started, man. Our forefather's rode unicycles before fast cars were around, so must you learn.
2. Learn everything there is to know about cars - including memorizing the answers to questions about walking, unicycles, horse and carriage, boats, planes, etc.
3. If you skip the step on learning to ride a unicycle, prepare to be chastised by old-timers that had to learn how to ride it and by some who love the unicycle and can ride it at over 20 mph! BTW - learning to ride the unicycle keeps bad people from becoming race car drivers.
4. Prepare to spend some money. Your standard car won't do - it doesn't fit race car specs! And every race track requires a different car and tire combination.

Is becoming a race car driver what you should do because you like to take those 15 turns of Bear Mountain road at an faster than the posted speed? Well, ham radio IS NOT a replacement for the "freeband" either. Ham radio doesn't fit everybody. Maybe its a bit of an extreme commitment for some. Hey, I can operate my equipment and

make sure that it complies with the same rules the FCC mandates for hams. I can operate it responsibly. I can operate it courteously . I can use the minimum amount
of power necessary for a contact.

Still, is it illegal to operate between 27.405 - 28.000Mhz ? Yes. Is it immoral? A crime against humanity? Absolutely not. To me - speeding in your car is a far more worse crime.

BTW, I do not condone operating on ham bands or intentionally interfering with any service that I am aware of. Yes, I know there are (very few, non essential) services allocated between 27.405 and 28Mhz. I support operations on 27.405 - 27.855 Mhz that follow the same regulations that hams follow.

Hopefully this metaphor can crack the thick skull of the "yes, but it's illegal, yes, but it's illegal, yes, but it's illegal" ham. This is issue isn't black and white.

Bob.

No amount of self justification will erase the simple fact that what you are doing is a crime. That makes you a criminal, and therefore not worthy of respect. You sound like the gang bangers in LA bitching because they are treated like hoodlums.

By the way, I do have a cherry 1974 427 FI ' Vette that I take out to LA County Raceway when I want to speed (it turns low 12's with street tires). When I am driving my Blazer on city streets, I obey the traffic laws. That's what honest people do...

FCC rules mandates amateurs operate on frequencies
authorized by their their class of license.  How do you
manage to comply with FCC laws when:
]
1:  operating out of band?
2:  operating without a license?
3:  operating non type accepted equipment?

Look dumbass...you ain't going to convince the people that have a license.
So quite trying to explain what you think is alright.  The bottom line is
YOU ARE ILLEGAL.  PERIOD.

>Hopefully this metaphor can crack the thick skull of the "yes, but it's
```

>illegal, yes, but it's illegal, yes, but it's illegal" ham. This is issue isn't >black and white.

Yes, it IS black and white. If you are in the United States and you operate a radio transmitter without an appropriate license or other lawful authorization, you ARE breaking the law....REGARDLESS of what "band" you operate it on or what rationalization you use to justify it.

No maybe. No "ifs". No "they really don't care and won't prosecutre me because "they" really don't care". "They" DO care.

There is nothing "liberating" or "free" about "freeband". It's illegal. Period. If you operate there you break the law. If you operate Amateur Radio equipment there (or on the "legal" 40) you break the law. Need I go on?

IF you HAVE a license you have a selection of radio bands from 1.8mHz up through microwaves at power levels that LEGALLY put you in the kilowatt levels.

IF you have a license you have certain PROTECTIONS:

If you do not have the appropriate license, you are NOT protected by certain federal statutes that limit LOCAL prohibitions against your antennas.

If you do not have an appropriate license, you are not protected by certain STATE statutes that ALLOW you to have a "scanner" or portable receiver in your car that may be capable of receivng law enforcement. Most states that DISallow scanners in cars ALLOW them for persons who hold an Amatuer Radio license.

IF you get caught you are subject to fines that can be in the THOUSANDS of dollars. And please don't tell me "they" don't prosecute freebanders. "They" do.

IF you get caught they may confiscate your equipment.

IF you get caught and they decide they REALLY don't like you, "they" may decide that fines and confiscation aren't enough. You may then be prohibited from operating ANY radio in the judgement, and your conviction is a FEDERAL one. Hopefully you aren't employed in a job that is interested in whether or not you have a federal conviction.

That's a lot of potential "loss" just to avoid taking the Amateur exams or the adrenalline rush of "getting away with it."

It's just not worth it.

73

Steve, K4YZ

Well, if allowing this renegade swatch of the social fabric to
choose not to obey laws is any example of where we are headed, I
guess we are all victims.

Fungi is anonymous. Fungi is hostile and attempts intimidation
through demanding personal confrontation. Fungi is attempting
stalking. Stalking is a crime.

There will be no welcome for Fungi, no meeting. If Fungi goes
through with the implied threat, Fungi will be dealt with as
deserves all stalkers and criminals. No problem.

I made no statement about any "wanting" by someone else. I was commenting on what I've experienced as an observer OFF the computer (as in NOT accessing newsgroups or websites) as to the appearance of already-licensed radio amateurs to "ordinary civilians." Observations of the last two decades.

Some don't like those observations. Tough on them. I'm not causing the attitudes. I'm fairly certain Ed Hare doesn't have the attitude alluded to, but Hare did go into some of the usual phrasing of "recruitment," ergo my comments.

My comments may have been too strong for some. One anonymous participant in here insists on a personal confrontation to "settle the matter." Has amateur radio evolved to some so as to condone them pushing civilians around? It would seem so. That is a progression to primitive barbarism involving overstuffed egos instead of radio.

So far there is nothing found on searches for WRC agendas other than a general statement about amateur radio. See Study Group 8 at the ITU-R. There is no mention of elimination of S25.5 in any searches of the subject.

>Okay, but I used the words "I" and "expect." In what way do you feel what
>others say indicates a "tad of that special ability" in my posts?

If Hare is able to "see" certain things not borne out by references
available to the public then that "seeing" is personal opinion or it
is a repetition of an urban myth. See the "seeing" comments
between Hare and Carroll of the past two weeks.

An example of the urban myth is the already-code-tested who
continue in the Belief that renewal-time Technician class
licensees will not renew, that they were never active, along with
allusions that they are "not really hams."

>I wasn't trying to change the defintion of speculation or anecodtal, Len.
>In what way do you feel I am fitting what pattern?

By the blanket statement that "Techs will not renew" at renewal time. The urban myth was born rather before the first no-code-test Technician class could renew, reinforced by "tabulations" on the AH0A website.

An interesting side-observation is that anecdotal reference is to be disregarded if made by a civilian or one of "lesser" class license. It is rather obvious that "anecdotal evidence" of something is only "factual" if one is of a "superior" class... amply demonstrated by others of such "superior" class license status.

>I used the term "I think" to indicate that I was offering a personal
>viewpoint. No need to belabor the obvious. I am sure that some of the Techs
>who became licensed but never active will renew. Those that don't were lost
>to ham radio as much as 10 years ago.

So were the 18,391 in the whole groupting of Extras, Advanceds, Generals, Tech-Plusses, and Novices who did not renew in the two year period ending on the close of March 2000.

The emphasis on Technicians not doing something (real or imagined) is to put some onus on those that did not have to take a code test for their license. The lack of emphasis on those that were code tested originally but did not renew is overlooked or virtually dismissed. The combination of the two is to lay blame on Technician class licensees for some "fault." Such "fault-finding" seems too much like putting them as "not real hams" or "unwanted" in US amateur radio.

But Larry K3LT, how do we know that the current Extra have
maintained their skills. The FCC need to insure that everyone
has maintained their skills. No more wanna-continue Extras
without retesting.

With a pickup truck and four hours on dump day I pickup 20 Sony's.
Interesting that you mention Sony, because their front end is very
suspectable to RF overload from six meter operation. This would not
effect the frequency conversion sections. But we live in throw away
economy. Too bad because 90% of their electronic circuits are still good.

I believe that Amateur Radio has much to offer to our education system.
Unfortunately, we are arguing among ourselves, instead of contributing
to the next generation.

What I would really like is a 200mhz plus scope. You can show the kids
your radios, but if can show them an image of the actual RF signal you
can open their eyes to a new world of underrstanding.

Larry KC8EPO

Bob,

Yours is the kind of misunderstanding that, try as people might, just can't seem to be overcome. I know FIRSTHAND that there are agencies that are assigned frequencies above and below the 11 meter CB band. Tell me, what is "unessential" about forest rangers. What is "unessential" about military comms? The difference is the type and duration of commercial and military comms as opposed to civilians who are there just to talk, often as much as possible, to as many people as possible. Business or military comms are short and to the point.

I know the regulars get tired of reading this example, but it is a perfect example of why NOT to "freeband". Some years ago, I was acting as communications officer for Civil Air Patrol on a live search for a light plane that disappeared during a storm. We planned to use a frequency near 11 meters which is a USAF frequency assigned to CAP. Like many rescue agencies, both civilian and military, we use our assigned frequencies so as to separate various kinds of traffic, take advantage of atmospherics (time of day), and keep from "interfering" with ourselves--air to ground on one freq., mobile to base on another, and yet another for "incidental comms" such as flight line, safety, or even sending out for food for the searchers. Another reason for choosing the low power 26 MHZ band was to prevent news hounds, ambulance chasers, and even possibly the family of the pilot from hearing adverse news via scanner. *Most* scanners don't deal too well with SSB. We quickly discovered that there was a "freebander" on that frequency calling, "BREAK, BREAK, skipland", etc with a linear that made it difficult or impossible to use this frequency forcing a lot of incidental traffic onto VHF. I was LIVID! There was NO excuse for this person operating on that frequency whatsoever. He was interfering with an active USAF authorized mission, a real emergency where a life was hanging in the balance. In the following week after the mission was suspended, I began to DF this pirate, determined to put a stop to his outlaw operations. One evening, I happened to be in a nearby town, and absently switched on one of my radios in the car not expecting to hear anything. The guy was pegging my meter and almost busted my speaker. On my way out of town, I made a screeching U-turn and went back into town, stopping at the town PD to ask if they recognized that voice. Yup, they knew the fella and where he lived. I drove to his house and confirmed the location. Outlaw was reported to FCC field office, and was busted for out-of-band operation AND interfering with emergency communications--a serious Federal offense. Betcha he got tired of eating beans from a .10 can!

There IS no excuse for operating on unauthorized frequencies. You might *think* these freqs are unoccupied and that the agencies thereto assigned are "non-essential". That is not for individuals to decide. Just because *you* don't hear anyone doesn't mean they aren't there and that there is no traffic being passed that you could hinder.

Finally, let's say I, or you, rent/lease a piece of property with a nice lake on it. Intending to do a little fishing, you stock that lake with a variety of game fish--bass, crappy, catfish, perch, or whatever. You are busy and don't get out to your lake real often, but one day you decide it would be a good day to go fishing; remember, it's "your" lake by virtue of your lease to use as you see fit within the guidelines of your agreement with the owner. When you arrive, you discover a large group of people on your property, at YOUR lake, catching the fish YOU stocked--in spite of the fact there are No Trespassing signs all over-even right where the trespassers are fishing. I'd be angry and I'd bring charges against each and every one that trespassed on my land. It doesn't make any difference if I don't come to the lake every day, it is STILL property assigned to me by virtue of rent or lease and nobody has any business on it without permission.

"Freebanders" don't have "permission" (license) to operate on frequencies outside the 11 meter band. They are trespassing just as surely as those people I cited in the above paragraph. And when they DO trespass, it pisses off those who are legitimately assigned said frequencies for their exclusive use and it don't make ANY difference if they "visit" (use) their "property" (frequency) once a minute or once a year--the "freebanders" are trespassing just as surely as if they just walked into your/my house uninvited. There is no respect due, and none forthcoming for trespassers, "freebanders", or outlaw radio ops.

Cecil,

If it were YOU on an international flight from London, and an outlaw operator decided to operate on 6.628 MHZ one of the HF aviation frequencies or even a tower frequency of 118.1 MHZ causing your plane to misread instructions, stray into the path of another plane and crash, would that hurt YOU? Of course. Operating on any frequency not assigned to an individual carries the risk of causing loss of lives or property--forest rangers attempting to determine, for example, the direction of a fire's travel in order to evacuate people from its path. US Forest Rangers DO operate above 27 MHZ. Would you want YOUR home destroyed or you life put at risk because somebody thought his hobby was more important than your life? Simply because there was someone with a "leen-yar" covering up fire comms keeping the fire fighters from getting the right instructions?

THAT is the potential harm. That is the reason it is illegal--not because FCC is trying to mess up somebody's fun.

Preach it Brother
It could not have been said any better.

FreeBanders are bottom feeding scum.
That should have all their equipment taken away.

Lets be realistic here, Stussy. No cop in his right mind is going to get that aggressive, or that excited, over a simple radio violation. Cops have been enforcing scanner laws for years, and I have yet to hear of a case where the cop overreacted simply because a person had a scanner.

It's a "matter of degree". Passing the nocode test is not exactly an
intellectual triumpf. The question is how many of the nocodes have
remained active? Nobody knows. But there is something of a gut
consensus that the nocodes tend to come and go at a higher rate than
do the holders of the other licenses. No doubt related to the old
"easy come, easy go" routine.

So what? Is that some kind of surprise? The nocode is the easiest
test. Why WOULDN'T the necomers opt for a nocode ticket?? I got into
the game as a Novice for the same reason. So did tens of thousands of
others.
>
The fascination with statistics juggling in this ng is asinine.
License counts mean nothing. Band occupancy and spectral efficiency
mean everything.

Cops don't have to be "totally onboard," Bill. Remember that CB enforcement will be a joint effort involving both local law enforcement AND the FCC. HR-2346 isn't designed to be a catch all, in all circumstances, law. Instead, it is only one part of a total enforcement effort. In all likelihood, local cops will handle the most obvious, blatant, violations, leaving the FCC free to solve the more difficult ones - the violations several in this thread insist the locals cannot handle.

Actually, we learned a lot after prohibition ended. Alcohol use has increased virtually every year since prohibition ended. Alcohol abuse has increased virtually every year since prohibition ended. And the problems associated with alcohol abuse (DUI, etc) has increased virtually every year since prohibition ended. There is no reason to believe the results would be any different when it comes to drugs if we legalize those now illegal drugs.

> The story is absolutely true, Dwight.

I was not talking about your silly story, Cecil. I was talking about your darn insulting suggestion that I support murder. If you cannot keep the conversation civil, then I would rather not be involved in this discussion.

Just about every ARES/RACES/Served Agency scenario is different. I live in one mountainous County in Colorado and work in an adjacient county that is more urban than rural but it still has rural problems. I belong to both ARES county groups. The Urban one is a combined ARES/RACES one.

In my home county which is very rural (15,000 population for the entire county) our ARES group has only been called upon 2 times in 5 years. Once for a forest fire, once when a man went crazy and bulldozed a telephone station and a town building. Whereas, in the other county, the ARES org gets called out 5 to 8 times a year, mostly for wildfires, where they act mostly as human mobile repeaters for the fire crews.

From what I remember, RACES can only be used during a civil emergency where ARES can be used for just about anything else.

So, Just where does ARES/RACES belong in a county's emergency/disaster plan?

You have to remember a couple of things about ARES and RACES. A) Not a first response group. B) Their expertise is in communications when normal forms of communications are ineffective or overloaded.

With the above in mind, the 2 most effective uses of amateur radio operators in an emergency are as spotters and relays or communications links.

They can also be used to give directions to emergency groups coming from outside of the emergency area that do not know the area. This frees the Fire and Police from having to expend resources not related directly to the emergency. Amateur Radio Operators can also be used as frequency translators. When emergency groups from different areas are working together but their equipment operates on different frequencies, A few strategically placed Amateur Radio Operators can be used to get messages from one unit on one frequency to another unit on another frequency by using the amateurs as human cross band repeaters. They can also be used when eemergency services looses their own radio communications (base station) ability.

Gee whiz! When you guys gonna learn to keep your responses short and to the
point? Don't write a darn book....nobody reads past the first two paragraphs
anyway.
If you can't say it in a few sentences, nobody cares.
Save your editorializing for the New York Times....

Are you suggesting that drug use and abuse has not increased at the same
rate as alcohol abuse?

Your original comment implied financial INFLUENCE over the FCC.
In any case, are you suggesting that Kenwood should NOT have
filed any comments with the FCC regarding the NPRM?

Dwight... the reason for HR-2346 was to give the locals
the ability to ACT without the FCC.

>HR-2346 isn't designed to be a catch all, in

Sure they will.  Thankfully, however, no city or town
has yet to so impower their locals...perhaps having enough
sense as legislators to know better than to open that can
of worms.

I didn't think there was any implication of financial influence by either
poster, just an implication that the only reason Kenwood sought change was that
they believed that Kenwood sought to gain financially.

>It's a "matter of degree". Passing the nocode test is not exactly an
>intellectual triumpf.

It is a lot more of an "intellectual triumph" than was my passing my Novice in 1963. I had a 4-page study guide to memorize; those who passed the Tech written had over 80 pages of printed questions in the pool alone, not counting the 120 pages of additional support material in study guides like Now You're Talking.

>No doubt related to the old "easy come, easy go" routine.

That didn't apply to the dirt-easy Novice of my day; why do you feel it applies to the harder Tech tests of today?

My emphasis was on whether they were active, Len, not whether they had passed a code test. Obviously you wish I had said something else so badly that you are trying to convince yourself that I did. For the life of me, I can't figure out why.

>can open their eyes to a new world of underrstanding.

I am bringing a mess of old Tektronix and HP scopes to Hosstraders this weekend. My price on the mainframes is $10.00 each or two for $10.00. While they don't go to 200 MHz, there are 30, 50 or 85 MHz models in there and these would be quite adequate to show what you want. That, and one of the plug-ins for $10.00 or two for $10.00 will solve your problem. I will cut you a deal, if you like, but you gotta' pick up the scope, or let me bring it to Dayton.

There's no way to know what would have happened. But note this: The total number of US hams grew from 350,000 in 1979 to over 600,000 by 1990. That's not 250,000 new hams - it's GROWTH of 250,000, back when ALL hams had to pass at least 5 wpm code. The total number of new hams in that period is even greater because of attrition during most of that time. (Because of the switch to 10 year licenses in 1984, no US ham licenses expired from 1989 to 1994).

Note also that the excellent QRP EME work reported in another thread was done by a couple of old-time 13/20 wpm code-tested upgraded hams.

>I "assumed" nothing.

Precisely. You assumed zero upgrades. Zero = nothing.

>I took the difference between the total
>number of Technician class licensees' increase and the number
>of NEW Technician class licenses granted came out to be 59.

Which you labeled as the number of Tech Pluses reclassified as Techs.

>That was what I said.

That was not all you said. Your method was faulty becaue you did not allow for the more than 7000 reclassifactions from Tech Plus, nor for any possible upgrades to other license classes.

>Simple artithmetic and a functioning
>calculator aren't "faulty."

It's your METHOD that's faulty, Len.
>
>What I see is just a lot of wordage (and considerable propaganda
>and/or psywar tactics in newsgroups) to somehow "prove" that

As originally claimed by whom?

What I see is just a lot of wordage and denial of simple facts (plus considerable propaganda and/or psywar tactics in newsgroups) to somehow "prove" that, none of the new, non-morse-code-tested radio amateurs are upgrading to have HF/MF privileges.
>
>>KE3Z posted information derived from the FCC database showing
>
>Directly from the FCC database?!?

Why yes. Did you miss the post? It's right in this thread. Check google.

>That database is about 55 MB
>in size.

So? That's very big, nowadays. Not everybody is limited to dialup service. Ever hear of DSL?

> What was the search program?

I dunno. Ask KE3Z. Why do you doubt it?

> Does it adequately
>handle the differences between the old FCC database and the new
>ULS database?
>
Doesn't have to. Conversion to ULS was long before restructuring became effective. All of the Technician Pluses who were reclassified as Techs since April 15, 2000 would be in the new database.

>Seems to me it is easier to use Joe Speroni's tabulations.

"Easier" because, when you apply your faulty methods, it APPEARS to support your predetermined conclusion.

What was the search program? Does it adequately handle the differences between the old FCC database and the new ULS database?

>>> I still hold to that observation regardless

You can respond to whatever you want, Len. Just don't expect everyone to meekly accept your faulty methods, errors of fact, and lapses of logic without comment.
>
>I explained my method of arriving at an observation, gave the
>numbers.

Your method is faulty, based on non-facts and illogical reasoning.

> Nobody disagreed with the numbers, therefore the
>arithmetic seems to have met with approval.

I disagree with the arithmetic. You counted one month twice.
>
>I used a post-restructuring period (past April 15, 2000) for the
>reasons given.

So?

> Miccolis used PRE-restructuring numbers.

No.

I used a time period that began two weeks before April 15, 2000. You used a period that started six weeks after April 15, 2000.

>Is
>pre-restructuring data a "correct" method for post-restructuring
>observation?.

Two weeks out of a year. You ignored six weeks out of ten months. Which is more accurate?

"Restructuring" began the minute the FCC announced the NPRM, by the way.
>

>The only significant change in US amateur radio licensing in
>the POST-restructuring period to me is a number of already-
>licensed amateurs got "higher" class licenses.

Which is all that was claimed in the first place.

>The NEW,
>never-had-a-ham-license-before, not-code-tested Technician
>class licensees are still on the increase as they were before
>April 15, 2000.

True - for several reasons:

1) Easiest to get
2) None of them expired before Feb 14, 2001
3) Thousands of Tech Pluses reclassified as Techs.

>At the end of May at least one out of three
>US amateur radio licensees will be a Technician class (they
>are just shy of that at the end of March 2001).

Are they ALL new hams? Are they ALL non-code-tested?
>
>>Shall I post them AGAIN?
>
>Knock yourself out... :-)
>
It takes very little effort on my part, Len.

"Jerry Oxendine" <joxendi@bellsouth.net> wrote in message news:3AF0D25A.910@bellsouth.net...

> Bob,
>
> Yours is the kind of misunderstanding that, try as people might, just can't seem to be overcome. I know FIRSTHAND that there are agencies that are assigned frequencies above and below the 11 meter CB band. Tell me, what is "unessential" about forest rangers. What is "unessential" about military comms? The difference is the type and duration of commercial and military comms as opposed to civilians who are there just to talk, often as much as possible, to as many people as possible. Business or military comms are short and to the point.
>
> I know the regulars get tired of reading this example, but it is a perfect example of why NOT to "freeband". Some years ago, I was acting as communications officer for Civil Air Patrol on a live search for a light plane that disappeared during a storm. We planned to use a frequency near 11 meters which is a USAF frequency assigned to CAP. Like many rescue agencies, both civilian and military, we use our assigned frequencies so as to separate various kinds of traffic, take advantage of atmospherics (time of day), and keep from "interfering" with ourselves--air to ground on one freq., mobile to base on another, and yet another for "incidental comms" such as flight line, safety, or even sending out for food for the searchers. Another reason for choosing the low power 26 MHZ band was to prevent news hounds, ambulance chasers, and even possibly the family of the pilot from hearing adverse news via

> scanner. *Most* scanners don't deal too well with SSB. We quickly discovered that there was a "freebander" on that frequency calling, "BREAK, BREAK, skipland", etc with a linear that made it difficult or impossible to use this frequency forcing a lot of incidental traffic onto VHF. I was LIVID! There was NO excuse for this person operating on that frequency whatsoever. He was interfering with an active USAF authorized mission, a real emergency where a life was hanging in the balance. In the following week after the mission was suspended, I began to DF this pirate, determined to put a stop to his outlaw operations. One evening, I happened to be in a nearby town, and absently switched on one of my radios in the car not expecting to hear anything. The guy was pegging my meter and almost busted my speaker. On my way out of town, I made a screeching U-turn and went back into town, stopping at the town PD to ask if they recognized that voice. Yup, they knew the fella and where he lived. I drove to his house and confirmed the location. Outlaw was reported to FCC field office, and was busted for out-of-band operation AND interfering with emergency communications--a serious Federal offense. Betcha he got tired of eating beans from a .10 can!
>
> There IS no excuse for operating on unauthorized frequencies. You might *think* these freqs are unoccupied and that the agencies thereto assigned are "non-essential". That is not for individuals to decide. Just because *you* don't hear anyone doesn't mean they aren't there and that there is no traffic being passed that you could hinder.
>
> Finally, let's say I, or you, rent/lease a piece of property with a nice lake on it. Intending to do a little fishing, you stock that lake with a variety of game fish--bass, crappy, catfish, perch, or whatever. You are busy and don't get out to your lake real often, but one day you decide it would be a good day to go fishing; remember, it's "your" lake by virtue of your lease to use as you see fit within the guidelines of your agreement with the owner. When you arrive, you discover a large group of people on your property, at YOUR lake, catching the fish YOU stocked--in spite of the fact there are No Trespassing signs all over-even right where the trespassers are fishing. I'd be angry and I'd bring charges against each and every one that trespassed on my land. It doesn't make any difference if I don't come to the lake every day, it is STILL property assigned to me by virtue of rent or lease and nobody has any business on it without permission.
>
> "Freebanders" don't have "permission" (license) to operate on frequencies outside the 11 meter band. They are trespassing just as surely as those people I cited in the above paragraph. And when they DO trespass, it pisses off those who are legitimately assigned said frequencies for their exclusive use and it don't make ANY difference if they "visit" (use) their "property" (frequency) once a minute or once a year--the "freebanders" are trespassing just as surely as if they just walked into your/my house uninvited. There is no respect due, and none forthcoming for trespassers, "freebanders", or outlaw radio ops.

When 1st licensed I lived cheek-to-jowl in a townhouse
development with many LEOs. One day one of them began berating
me for jamming his TV during "the big game". Said he recognized
my voice even tho I could and did only send Morse and hadn't
even been home at the time. All the while his kid kept tugging
his sleeve and importuning "Daddy, daddy". Finally he turned on
her and shouted "WHAT!". "Don't you remember daddy" the dear
child said, "it was mama's hair dryer ..."

Is the Big Orange Dog related, in any way whatsoever, to Clifford, the
Big Red Dog? And, if so, does Clifford have any influence with League
policies and incentives?

What I mean is that the definition of a ham does is not indicative of
breaking the law ... albeit some do.  A freebander by definition is breaking
the law when they operate.

SOME hams may break the law, ALL freebanders break the law. Both need a spanking.

why do those who break the law always assume that everyone else does also and
use that to justify what they do? this argument goes right around in a circle
and shows how hypocritical these freebanders are... if you chastise someone by
assuming that he is speeding and then tell him to go become a race car driver to
do it legally, why don't you get down to work and learn how to be a legal ham so
you can speed on the legal ham bands properly instead of slinking around
illegally.

You're both right, but Dwight is missing a point. There are many people with alchohol problems but those problems primarily affect themselves and the ones who love them. The same would be true of drug problems if drugs were legalized. I've never heard of a wino mugging people to buy a $1.69 bottle of wine but addicts commonly rob and kill us to support $500/day habits that'd be $5/day habits if drugs were legal. Truth is drug laws have done little to reduce the supply, they have simply driven prices so high that innocent people are being robbed and worse.

Besides that, the WOD has given each and every one of us a "drug problem" in the form of overzealous laws and enforcement. For example a local man was on his way to buy a new motorcycle when police stopped him for looking like a druggie (profiles). They asked if he had any drugs or money. No and yes, he didn't use drugs but had $5000 to pay for the bike. Police promptly confiscated both the $5000 and the bike he was riding, leaving him to walk home! No arrest, no due process, just suspicion! He got a lawyer and months later got his bike and $2500 back. The other $2500? Well, that'd have been the cops share if he hadn't posted the bond and paperwork needed to get his stuff back and they'd already spent "their" $2500! He'd have to wait til they confiscated somebody else's $$$ to get his back. He was already out lawyer and bond fees even tho no drugs were found and he hadn't been arrested let alone charged!!! Now thats another drug problem that potentially affects us all.

What if somebody started a rumor among police that drug dealers were using ham radios to conduct drug deals? Remember, all it takes is suspicion .... :o(

So when a freebander is transmitting with legal power levels on the legal 40 they're still breaking the law?

I'm a CB'er (not for long. I take my written tests early this month), and I, unfortunately, get sneered at for not having my ticket, simply because there are those who DO choose to violate FCC rules.

I don't condone violations of FCC rules. However, I would like to see a sideband only band above channel 40, but below 27.800, with a 50 watt limit, for CB'ers to DX on... The frequencies allocated for this could "go around" the currently allocated forestry, etc, frequencies, much in the same way the CB frequencies skip over the RC freq's.

Just my two cents, here... Of course, your mileage may vary.

No when you transmit of the 40 channels you are authorised to use you are a
cb'er. As soon as you turn up the power passed the 4/12 or go outside those
channels you are breaking the law

> I'm a CB'er (not for long. I take my written tests early this month),
> and I, unfortunately, get sneered at for not having my ticket, simply
> because there are those who DO choose to violate FCC rules.

I have no problem with cb'ers ... I was one when I was a kid too ... I do
however have problems with people taking what I had to work for.

> I don't condone violations of FCC rules. However, I would like to see a

Why? I regularily work world wide on 10m with as little as 10watts on ssb
(min required for the autotuner to work) and that is from the car.

Larry,

This post had absolutely NOTHING to do with ANY respect for me. It had EVERYTHING to do with honoring a woman and a child who were tragically killed and who could have not given a flip over ITU regulations, Morse Code, or the goings on in RRAP.

Was there something about the way I worded that that escaped your superior education? I re-read the item several times before I posted it the first time to make sure there was nothing "self-serving" in it and I have re-read it several times now.

I assume that in that rather impressive sounding degree you recently finished, that there was some instruction in the use of the English language?

Perhaps YOU made THIS post in order to do a little hand washing of your own over some of YOUR past conduct?

I find it somewhat humorous that someone who had a four month long running battle with a woman over a callsign (including some very ugly comments over appearence, etc...) has NO business trying to pass any judgement over any other person about what is "childish".

Now, Dr. Pot, if you are done calling Pa Kettle black, maybe you can find something constructive to do with all that education you have recently completed?

Steve

Or perhaps you don't care?

Subject: A Respectful Suggestion
Message-id: <20010501131119.26864.00003097@ng-fi1.aol.com>

Not wishing to appear to appear to be suggesting any form of censorship, may I respectfully suggest that the present on-going threads that refer to the recently killed missionary be cut-and-pasted to a new thread title?

None of the on-going threads have any pertinence to her or her tragic death or the death of her infant daughter, and I think it would be an act of respect to stop posting to threads that would seem to be discussing THEM...NOT the code/FCC/ITU debates that it has

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Because most HAM's know how to run their radios, and MOST CB'ers dont. A majority of CB'ers think that turning the modulation up past 100%, using negative peak modulation compression, and other "tricks" makes them louder. In reality, it makes for a noisy band. I know better... My GrantXL, with the 2 watt carrier, at 99% modulation, sounds better than most of the "export" radios in the trucks out there, and "walks" over them as well. Granted, I run a 5/8 dipole on the car (two 4' Wilson Silver Load antennae, over and under), tuned properly, so I'm probably radiating more than they are, but hey, it works.

At any rate, a band for those who do know how to run a radio would be nice... It's a pipe dream... one I won't have to worry about later this month, hopefully, but still.. it would be nice.

Using a type accepted radio? No, it's not "freebanding". Then they are legal. Using an Amateur transmitter or a "opened" 11 meter "export" radio? Yes...it's illegal.

>However, I would like to see a
>sideband only band above channel 40, but below 27.800, with a 50 watt
>limit, for CB'ers to DX on...

Then submit a thoughtfully worded petition to the FCC to get them to open an NPRM. However the FCC has had SEVERAL very well prepared petitions for the very same thing, and always with the same result: That part of the radio spectrum is INTERNATIONALLY allocated for other purposes. Hobby radio is NOT one of them. But give it a try...

>The frequencies allocated for this could
>"go around" the currently allocated forestry, etc, frequencies, much in
>the same way the CB frequencies skip over the RC freq's.

And of course, since regulations will require that no one operate on THOSE frequencies, just like they do for those RC channels now, no one will transmit there. Yeah...right!

$2500 is a cheap price to pay for keeping our children safe.

Sideband says:

>At any rate, a band for those who do know how to run a radio would be
>nice...

There are several bands like that. They're called "Amateur Radio" bands.

73, Hans, K0HB

There already is one. 10 meters. You just have to get a
license. Whats the point in creating another special band for
people who don't want to get a license? You already have channels
1-40 and it got messed up. So now you've got FRS...It doesn't
make sense to just creating bands for people to use in a manner
inconsistent with the intent. Any unlicensed band is going to be
bedlam. Do you think if the FCC legislated a "freebander band"
from 27.455 to 27.800 that it would be any different? Would the
guys turn off the lean-yars and start using legitimate callsigns?

Uh, 8 feet is not 5/8 wave on 11 meters. A 102" (8-1/2') whip is 1/4 wave,
so a 5/8 wave would be a bit more than 17 feet long.

(you should try a 102" whip, I think you're likely to find it more effective
than the twin four-footers. Because you won't have loading-coil losses.
Mine worked *fantastically* well on 10 meters with a converted SSB CB.)

That isn't freebanding, that is operating on the cb channels legally.

Why should there be a need for that? If anyone wants to operate SSB at
50 watts or more and work DX legally, get a ham license.

Try and argue the point all you want, but there will never be any respect for illegal freebanding except maybe from other illegal freebanders. If you want respect do something that deserves respect.

Steve Robeson LPN axed:

> it's called "Professional Courtesy".
>
> Was ANY of the information that I stated incorrect?
>
```

Yes. The statment "it's called Professional Courtesy" is flatly incorrect.

Professional Courtesy is a specific term for a free or reduced price service performed by a professional person (ie., Medical Doctor, Attorney, etc.) for another person in the same profession for which he would otherwise charge a fee to the general public. For example, a dentist might treat the spouse or children of other dentists for free or at a reduced rate as a professional courtesy.

By definition, an "amateur" cannot extend a "professional courtesy".

Good luck on this one now!

Hans

These "freeband" morons think that if they listen to a frequency and
they don't hear anyone, it is OK for them to use it. That's why so many
are now moving up to 10 meters. It simply amazes me how anyone can think
that just because they don't hear any communications on a frequency it
must be OK for them to transmit on it. Typical of the cb mentality.

Doug:

Hit Wilson's site and read up on what a Wilson Silver Load is....

Better yet, I'll explain it. a 4' Wilson Silver Load is a 5/8 (on 11M)
top loaded coil antenna. Two of them make 1 1/4 wave. Maybe I should
have said 1 1/4 wave dipole?

-SSB

A technicality overlooked by many is that Part 95 operation on 27MHz, better known as CB, not only sets a maximum legal power level, it also requires the use of a 'type accepted' transmitter/transceiver. So, even if you turn the power down on an amateur transceiver and stick the CB channels, it's still not legal. The law is that CB radios are used on CB.

Not that it functionally makes that much of a difference, but that's the law.

Dana

Bill:

Apparently I shouldn't have voiced my opinion. With a few taps of your
keycaps I've been crammed in with the freebanders. Perhaps I should go
out and get an 800W linear, run at 130% modulation, start calling CQ on
28.085 AM, and forget about taking my Tech and General written exams
next week?

What do you think?

I don't know how you extracted that defense out of what I said,
but I have no problem with you voicing your opinion. I just don't
agree with the concept of a special band for illegal operators.
Maybe you were just being sarcastic, I dunno.
I support your studying and taking the exams and upgrading. Thats
very commendable. Check out some antenna theory on the side and
you'll also better understand some of the merchandising
terminology referred to in your other post.
Good luck to you. I hope you accomplish your goals.

Good work, Sherlock - you've pointed out it's illegal, *again*. We've established that.

How serious a crime is it? Your assignment - think of all the crimes you can, where does freebanding fit it? Maybe you should go spend your time protesting real crimes (I can provide a list if you need one, where do I start...how about NAFTA).

And, of course you don't speed. You're a decent, upstanding citizen - who turns in your neighbor for digging without a permit - thanks for making the world a better, safer place.

Bob.

Dan:

I honestly don't know how to respond to this. Your post below is so thick with sarcasm I fail to see your point. Perhaps you could tone it back a few notches and provide some facts (if you can find any) to back up your assertion that (1) I'm a liberal, (2) I'm lazy, (3) that I've operated illegally, and (4) Just what the SAT's have to do with it.

After you've done that, I may consider explaining my reasoning behind my opinion so that you might understand it.

Again, I caution you, do not include me amongst the freebanders; I'm neither one of them, nor do I condone what they do (as I stated in the very first sentence of the quote you so vitriously lambasted.)

-SSB

So you are telling me theres no such thing as a pile up on a ham band ... where there may be hundreds of people talking at the same time ? Happens on them too ... my 10 does fine ... more is irrelevant.

Bob,
    Over the years I've discovered that when someone defends an obviously
illegal activity, they usually have some ulterior motive. What is your
motive?
Do you operate outside the amateur bands?
    Why in the world would you defend those who flaunt the laws that make
amateur
radio (and the other radio services) possible?
Steve

>My emphasis was on whether they were active, Len, not whether they had passed
>a code test.

Of the three US amateur radio licenses that may be acquired now,
only the Technician class test omits the code test.  Of the six
license classes existing before April 15, 2000, only the Technician
class test omits the code test.
```

>Obviously you wish I had said something else so badly that you
>are trying to convince yourself that I did.

Hare mentioned no Extra, Advanced, General, Novice or Technician
Plus licensees. Only the Technician class, some who "were not
active." Why the emphasis on Technician class?

I am acquainted with an Advanced class licensee and a General
class licensee, neither of which has been active for at least 15
years. I don't think they are the only inactive code-tested
amateurs in the USA...but I cannot "prove" that.

>For the life of me, I can't figure out why.

Irrelevant trolling question. :-)

There exist renewed licensees of all amateur radio classes
who are not active, partially active, mostly active, and a few
whose seeming only reason for being is to be active.
"Inactive" licensees counts or percentages are not on
public record. Ergo, all such statements are simply personal
opinions and must be taken as such.

>But I said that Techs who never became active won't renew, Len.

Is that a provable, factual statement or just a personal opinion?

Just on an anecdotal basis, I know one Technician class licensee who has only been "active" on ham bands for the telecommand of model aircraft. No other purpose. I've met three others whose only reason for getting a Technician license was to communicate during hang gliding activities. None of the four are "active" in the sense of "activity" done on HF or VHF communications by radio amateurs. None of those have to renew for at least another three years.

I know one code-tested Advanced who has renewed and has never been "active," does not have any amateur transmitting equipment now.

I know one Novice class licensee, a double Emmy award winner, who has not, as far as I know, operated in any Novice band with his own equipment. He is extremely competent in hardware of electronics and radio. Will he renew to change classes by test? I don't think so, but I cannot tell the future two years from now.

There have been public statements made in here beginning two years ago that "Techs will not renew" or "few Techs will renew" (so that their numbers will "drop drastically"). That has been a common urban myth propagated in here by many a PCTA, all of whom seem to have a "special ability" of "knowing" the future.

> Lacking the
>special ability that you are bantering about, I can't tell whether you are
>misperceiving things that badly or are misrepresenting them. Can you explain?

Another irrelevant semi-trolling question, perhaps written out of irritation or aggravation?

I asked for reasons why Technician class licensees were singled out as "not renewing." Lacking any "special ability" to foretell the future, I was wondering why the (no-code-test) Technicians were being singled out as examples of non-renewal or inactivity.

In article <3af0e27d.31776440@news2.dvol.com>, kelly@nospam.dvol.com (Brian Kelly, w3rv) writes:

>>There is a "poll" or questionaire result to confirm this? Did over
>>TWO HUNDRED THOUSAND individuals take the trouble to
>>pass a test for a license because they had "not the faintest
>>interest in the hobby?!?!?"
>>
>It's a "matter of degree". Passing the nocode test is not exactly an
>intellectual triumpf.

Passing any or all of the test elements, including the code test,
is not an intellectual triumph. :-)

>The question is how many of the nocodes have
>remained active? Nobody knows.

It would seem that some do know, else why would they charge
that "nocodes" were not active.

>But there is something of a gut
>consensus that the nocodes tend to come and go at a higher rate than
>do the holders of the other licenses.

That's a very subjective observation, especially so when made
by an obvious PCTA. :-)

>No doubt related to the old "easy come, easy go" routine.

An amateur radio license is just a regulatory mechanism
used by the FCC as part of its task to regulate US civil
radio. None of the test elements are either "intellectual
triumphs" or academic achievements. Amateur radio is
not essential to the well-being or safety of the nation's
citizens taken as a whole.

If already-licensed radio amateurs insist on some "hard"
testing as a result of work and arduous study, then they
do that insistence for their own peculiar personal reasons.
Those reasons have nothing at all to do with the FCC's

task of regulating radio in the USA.

>So what? Is that some kind of surprise? The nocode is the easiest
>test. Why WOULDN'T the necomers opt for a nocode ticket?? I got into
>the game as a Novice for the same reason.

Kelly got a Novice license without taking a code test?!? :-)

>So did tens of thousands of others.

How many are still active? How many dropped out soon after receiving that license? How many did NOT pass, never receiving a license?

The claim that "tens of thousands of others" did something has no validity in arguments that require a comparison with trying but not doing that same something. Are there any counts of those who tried and failed? Are there any counts of those who did not take any amateur radio test at all?

>The fascination with statistics juggling in this ng is asinine.

That would be the "gut feel" of those who cannot argue a subject involving statistics? :-)

It seems to me that the government does indeed look into statistics of such things as licensing in its task of regulating radio.

Joe Speroni, AH0A, is an evident PCTA, on public record as being an advocate of amateur radio code testing. Speroni has been tabulating amateur radio statistics for about three years now. Is Speroni "asinine" for doing that task?

>License counts mean nothing.

I can't believe Kelly really believes that. If the number of radio amateurs in the FCC database falls to a very low number, is the FCC going to maintain US amateur radio?

>Band occupancy and spectral efficiency mean everything.

So...how is the 2mm band occupancy in Kelly's geographic area? It is 7 GHz wide, the largest bandspace allocation for Region 2 amateurs. Does Kelly advocate dropping all VHF and higher amateur bands because their use does not show "spectral efficiency?"

The point I was trying to make, Bill, is this: If the frequencies get "thick" on a particular HAM band, HAMs have a multitude of other frequencies and bands to go to. Not to mention the fact that if the FCC would allocate a sideband-only band in the area I suggested for unlicensed CB, the people running on that band wouldn't be illegals. They would be transmitting in accordance with FCC rules.

> Maybe you were just being sarcastic, I dunno.

Only a little. I suggested the FCC allocate a new band for CB for sideband transmissions. Yes, it would be thick, but it would make the regular 40 less crowded, and give a spot for sidebanders to transmit without (hopefully) being interfered with by AM carriers and the like.

I did not suggest this to help support freebanding; quite the opposite. I suggested it as a way to give those CBers who enjoy transmitting on sideband (like I do) to do so with less interference from the riffraff who run dirty, over-modulated, noise-toy filled, echo-boxed, over-reverb'ed, export trash radios.

That's a pretty good question. Unless I'm missing something, I would
rank it right up there with driving on the shoulder of the road where
such is illegal.

SSB-
I think I'm giving you the same answer that the FCC would. If you want radio communications as a hobby, get an amateur license. Allocating HF spectrum is an international concern, and really the FCC can't arbitrarily choose to do that. The only reason CB was able to be implemented back in the 50's, is because that spectrum was taken away from hams. The intent was "personal communications" for small business or those who had personal needs, and had no other good two-way radio option at the time. It never was intended to be a band for radio hobbyists and AFAIK, the FCC still looks at it that way.
They gave up trying to license operators on the Citizens Band many years ago, which to a lot of minds, was like throwing their hands up at the problem...and future concerns. To dodge the fact that their 27 Mhz creation became hopelessly useless for what it was intended for, they set up FRS to continue giving back the desired basic two-way service to the public.
I don't think they would be interested in cycling backwards. They have a place for hobbyists, and they have a place for 'personal business' communications. Nothing more is justifiable.

That's pretty good. Or maybe it's like throwing beer bottles and McDonalds wrappers out the window on the highway, or driving really slow in the ultrafast lane, or parking in handicapped spaces. Ya know, something Dennis Leary would sing about.

SSB,

I'm not arguing with your points here, but there is something that many people are not aware of. Quite a bit of that spectrum, either above or below, is not within FCC's power to give or even regulate--except in the cases of unlicensed operators. Much of those areas are under an agency called NTIA--National Telecommunications Information Agency. They have more "pull" than FCC, and that spectrum is mainly under their jurisdiction. NTIA assigns and regulates US Gov't frequencies including US Forestry, and military, for example. The remainder IS assigned to forest products and various state forestry/fire agencies. IOW, there is no spectrum for FCC to give because what areas they do control are assigned, the rest isn't theirs to "give". I hope that sheds light on your proposal.

Sideband,

CBers, since they are unwilling to self-regulate or obey any rules at all,
ALLOW the "riffraff" to flourish. Since CB is an unlicensed, and virtually
unregulated service, what is to stop ANY 27 MHz frequency allocated to it
being "filled with dirty, over-modulated, noise-toy filled, echo-boxed over-reverb'ed,
export trash radios"?

Never thot of it that way. OK everybody, each & every one of you
send me $2500 and I'll keep kids as safe as the WOD has (Can't
do any worse). I'm in the book .. :o)

Then, Dwight,

You must've not read about the teenage ham in Kentucky a couple years back. Seems he was at some sort of public event, or something, and had his handheld with him. Cops "overreacted" by seizing his radio and charging the hapless ham with having a "scanner". Sure, the charges were eventually dropped, but not without a lot of hassle and inconvenience to the ham, and, likely, money spent. Took awhile to get his HT replaced by the LE agency. It is easy to say it won't cause trouble until a big-headed cop seizes YOUR equipment. I don't like the law, and I've said it before; now that it IS law, if it DOES happen to me, I'll sue the sons of bitches and see to it the story is on the news.

Right on the button Jerry. What we're dealing with here is a severly
underfunded federal regulatory agency who has lost it's teeth and
would rather roll over and play dead and surrender to anarchy rather
than make a stink. Some day somewhere some people will die, there will
be CYA "congressional investigations", yeah, right: Too late as usual.

I think code will always be around. Those various tv and repeater
ID's are absoluty best heard by CW, and don't interfere with voice.

I always wanted to go for the highest level of testing myself. Felt
bad they stopped at Extra. Course I got my 2nd Telegraph.

I think all people should have rights to portions of our bands,
with only a price of a ticket. That in no way stops advanced levels
of testing from having special privileges. Heck, its more fun to talk
with the public on FRS, than trying to talk with a bunch of old buzzards
on ham radio. Don't even need an FRS license. You just go to the store

and your on the air.
I got interested in radio because it was interesting to me. Opperating CW is always the best in fun and enjoyment looking back. Whatever it may be, the newcommer must have something to interest them, and I don't really see much there today. Too bad you don't need a han license to opperate the internet!!

No, by definition this is not "free banding". There is no "legal" anything if freebanding. If you are operating properly as a CB'er on the allocated frequencies using authorized equipment and power levels, your not breaking the law.

If your asking if your only a criminal while operating in the "free band", I would ask is a person only a bank robber while committing the act, or are they still a bank robber afterwards?

> Agreed, Or someone is jerking C-1 and the NSAs chain. :)

There are several militia group websites where you need the proper decryption software running just to log on. Of course it is a waste of time to send an encrypted communication these days. The govt has all of the commo power of the internet at its disposal (read Tom Clancy's novels. He talks way too much.). Eventually even if it takes a decade they will decrypt it. PGP ain't that good anymore. Fact. Someone I know has just started to get decryption on some PGP v1.1 stuff written on a 386. State of the art stuff back then. Sad, when matched against 1.5 gig processors daisy chained together a few years later. If you sent mails that would get you in trouble using the old routines then they will take you away, or at the least pencil you in for routine tax audits and put you under surveillance, and listen for EMP from your current PC. One time usage code groups are smarter. Just don't reuse them or share them. But then what about the other guy? How good are his security procedures?

1000 pentium IV chips chained together can generate a thousand years of decryption time pretty quickly. Look at project SETI and see what they have done with their screen saver.

And wait 10 years and see what kind of CPU power is coming. You would have to be totally stupid (or 100% sure of operational success) to write an encrypted message that could hurt you.

If you really want to know the answer. Yes the Examiners will be more than happy to go to an invalids house to administer an Amateur exam. This is what amateur radio is also about. Helping anyone become a Ham. Ham's will even go to the invalid's house and give them instruction in order to gain the knowledge needed to pass the tests and become Ham's. I should qualify the above to state that I would require the invalid to be a long term invalid and not just have a cold.

> abuse has not increased at the same
> rate as alcohol abuse?

There is no known correlation between drug and alcohol use/abuse. For example, drug use had a dramatic increase in the mid to late sixties, while alcohol use remained relatively flat during that same time period. By comparison, alcohol use had a sharp, but much smaller, increase in the late seventies, while drug use remained relatively stable. In the early eighties, alcohol had a sharp decrease, while certain drugs had a sharp increase. In the late eighties, both saw a sharp increase. However, in the early nineties, alcohol remained relatively flat, while certain drugs increase and others decreased. People have looked for a pattern between the two for years, but they just don't seem to follow the same patterns or trends.

What???? I saw a TV show on drugs yesterday that said alcohol is
the entry level drug of choice. Almost all illegal drug users
use alcohol first.

What you are saying Sideband is You are asking for a band that is set aside for SSB only use, between certain freqs And you think this might help the congestion, well this band already exists(27.405-27.999)and people are using hundreds of watts with rules and regulations already in place and they are not respected and are ignored, They already have this band yet they still come on 10m. What will be any different then. We should be thankful the FCC hasn't pulled the plug on 11m it is more trouble than what its worth. One day they will cut their losses and axe 11m.

>
>In what way, and why?

Because I design and build almost all of my own ham gear, Ed. Test equipment, too. And I have done so since I got my license in 1967. I've never owned a non-American-made piece of ham gear, new or used. The equipment I haven't designed/built has mostly been "basket case" American made stuff that I rebuilt into usable shape.

You wanna see a list?

("Yaecomwood" is a term used to indicate the Big Three JA ham equipment manufacturers - Yaesu, Icom and Kenwood)

I've used all sorts of stuff at other hams' stations, so I'm familiar with their products. But I have no desire nor need to buy any "Yaecomwood" products.

Since the ham gear makers depend on hams buying their products, an active ham who has no need of their products is their "worst nightmare". Perhaps that's a bit overstated, because the loss of one customer isn't going to break them. Maybe I should rephrase it to "Yaecomwood's worst customer".

Does Hq get Electric Radio magazine? If so, dig out the issue for July, 1995. Also QST for June, 1994, page 55.

You inferred what I did not imply. The $$$$$ meant that Kenwood would make
money by selling more ham rigs, nothing more.

>In any case, are you suggesting that Kenwood should NOT have
>filed any comments with the FCC regarding the NPRM?

Not at all - everybody has the right to comment.

But I think that it is not in the best interest of the Amateur Radio Service
for the FCC to be so influenced by the comments of a foreign equipment
manufacturer. Just my opinion.
>
Would you defend Kenwood if they had commented that the code tests should be

I am relieved to read that.

We shall see what happens in 2003. I don;t think S25.5 has much of a chance, do you?

I'm not missing the point - I just don't agree with the premise. Yes, alcohol is a major problem for the family, but we cannot so quickly dismiss it's effects on society (DUI, lost production, on the job accidents, and so forth). Drugs, even if legalized, present the same problems for society.

More importantly, the use of alcohol did not decrease following the end of prohibition. In fact, alcohol use, and abuse, has increased every year since prohibition ended (and so have the problems associated with that). Therefore, there is no reason to even suspect that drug use will decrease if drugs are legalized. In fact, if prohibition is any gauge, the use and abuse of those now illegal drugs may actually increase. And, as I said earlier, why compound the alcohol-related problems in our society by adding the problems associated with a growing drug problem (even if we ignore the crimes associated with the illegal drug trade)?

Still more importantly, contrary to the popular myth, the illegal alcohol trade did not decrease after prohibition either. In fact, it actually increased in the years following prohibition as illegal alcohol peddlers simply switched to stronger alcohol products and new markets in smaller towns. In fact, the illegal alcohol trade still exists to this day, though on a much smaller scale than it did in the fifties and sixties (when the trade of illegal alcohol hit it's peak more than 20 years after prohibition ended). Therefore, again if prohibition is any gauge, there is no reason to believe that the illegal drug trade will decrease following any form of drug legalization either. As long as there is money involved, drug dealers will simply follow the early illegal alcohol peddler's lead by switching to even stronger drugs and/or new markets.

So, in the end, the premise that drug legalization will reduce the problems associated with the drug trade, or the problems associated with drug use, is simply not supported by our experience with prohibition.

Be careful how seriously you take claims on an antenna manufacturer's site.
The major ham magazine QST no longer accepts claims of antenna gain in
advertising, as there were too many attempts to compare apples & oranges.

We may have a difference in definitions.

In amateur radio, loading coils don't count when explaining how long an antenna is. It's the whip that actually does the radiating; loading coils serve to make the impedance of the antenna reasonably close to 50 ohms resistive, to keep the transmitter happy. (an important function certainly, but a very different one from that of the whip. If you redesigned the transmitter and feedline to accomodate the non-resonant load, the loading coil would be completely unnecessary and the antenna would radiate exactly as well and in the same directions.)

Amateurs often use 5/8 wavelength antennas for the 2-meter VHF band. 5/8 of a wavelength at 2 meters is approximately 125cm, or roughly 50". I just measured the one on my truck, it's 47" long. (well within the tolerance of my non-calculator-enhanced math!) There is a coil in the bottom of the antenna, but its sole purpose is to match the antenna to the transmitter.

Your statement is unoriginal and weak.

So, you base your respect for people on whether or not they follow the laws
that your local, state and federal government imposes on them?

Let me ask you this then, if you were around during prohibition (were you?),
would you have disrespected bootleggers and consumers of alcoholic beverages
up until the very point where the 18th amendment was repealed?

Good thing all those amendments came along abolishing slavery and granting
women the right to vote or you still wouldn't have respect for women or
Negroes.

Computers compete for kid's time, my 9-year-old grandson packs a
Daytimers, sometimes I manage to squeeze into his schedule. Surfing is
a pastime which kids in general today find is more fun than ham radio.
>
Brings up the discussion about the "kinds" of hams we're talking
about. There were two basic kinds of Novices back then. Those who
bought off-the-shelf equipment and those who rolled their own,
operators & soldering iron jocks, rather different critters and that
gulf is clearly still out there.
>
Those who rolled their own are analogous to the VB and .html warriors
of today. Those who bought their gear instead are analagous to the
plug 'n play Web surfers of today.
>
There was a hybrid certainly in the earliest days of the Novice
license - those who built their own or boogered cheap military surplus

gear to get onto the Novice bands because we couldn't afford the plug 'n play catalog goodies thus we couldn't get on the air unless the soddering arn came into play. I was one of those and still am. If I can afford to buy it I ain't about to build it. Sometimes if what I want isn't in the catalogs I grudgingly drag out the damned soddering arn again. Fortunately I don't have to do that very often any more, thankew fat ham gear catalogs which we didn't have back when.
>
That whole build or die ethos has been lost of course.
>
>Only a few of those thousand students in my high
>school would have wanted to do the former; the other 998 would have done the
>latter. We had plenty of distractions available in my wild youth, too, and

>are still active.
>
I was pretty lucky in this respect I guess. We had 1,500 kids in my public high school including a *bunch* of hams and a very active school-sponsored ham station. Those guys were on 220nHz with an 829B in 1952. Plus I was raised in a tiny town which has always had a disproportionate number of hams. It was a great enviornment for a wannabe ham kid. Most of the hometown OTs have passed away but I can count five of us former UDHS Novices who are still active.
>
Yeah, sure we had "distractions". My General ticket arrived the day of my Junior Prom. Immediately after the prom (like ten minutes after) amidst much feminine screeching and tears I dumped my hormonally-crazed redhead squeeze on her doorstep at midnite, laid a patch outta there with Dad's Pontiac and split for home to get on the radio. Cranked the ARC-5 down to 3.505 and pounded out a CQ with my heart racing and yahoo holyshit here comes g5zk, my first dx contact. In my tuxedo. How good can ham radio get? . .
>
(PS) Isabelle went on to marry a typical EE and had ten kids and she keeps telling me we're still not speaking.
>
>Compared to my studing a 4-page study guide and memorizing 26 characters, 10
>numbers and a few punctuations and prosigns? Quite a bit tougher, IMHO.
>
Nah. The test technical "challenges" are roughly the same but all ya got was crystal-controlled 50w worth of cw in the HF Novice bands. Nobody bothered with the 2m phone thing.
>
>
Trudge to the nearest FCC office (100 miles? 150 miles?) to take the entry-level test during their 9-5 office hours. Yeah, sure: Like Reverend Ralph the Dean of Boys passed out excuse slips to skip class so ya could go downtown to take a stupid ham radio license test.
>
Screw up the test, any element and don't come back to try again for 30 days then take the whole test over again, ALL of it, writtens and code test. Do 13wpm within a year or forget ham radio forever.
>

Get a string of 25 5wpm characters correct on paper without any
errors, none, or come back next month and do the whole drill AGAIN.
>
Ignoring the code test if the nocodes had to put up with that regime
there wouldn't be anywhere near as many of 'em as we have now.
>
>It ain't some mythical "cyberspace," either. I feel I am having real
>convesations with real people.
>
There is no difference at all in this respect between a "wave orf the
future" PSK qso and an instant messaging "qso". Except that the
instant messaging "band" is always open, ya don't need to hang any
antennas and ya don't need to accumulate CSCEs to be allowed to do
it.
>
>
>Yes, but back then, there actually was significant activity on the Novice

>doing.
>
Bingo. The growth of ham radio has completely outstripped the growth
of the population in this country and I fully expect it will continue
to do so. I just luv the "ham radio is dying" posts. As if!
>
>Good point; I like it. But that tower of babble comes from all the hams
>that some say are playing with computers instead of ham radio.
>
I'll twist it further. It's a matter of understanding the marketing
dynamics and accepting current realities. Kids are not gonna dive into
ham radio like they did in days of yore, they have "more exciting"
things to do like surfing. Ham radio will increasing become an older
folks pastime, it takes maturity to get the drift and attractions of
ham radio these days and they should be the target market. They have
to money and the time the kids don't have.

Sorry, but in Texas if the owner is paying the taxes on the property, it doesn't matter if he never uses it, it still belongs to him and no one can claim ownership by just using it. I have some pasture land in west Texas that hasn't been used in some years, but I pay the taxes on it every year. You go and try to use it and claim it as yours and see how far you get. If however I fail to pay the taxes for a period of

time and you come along and pay the taxes for a number of years (I
don't off hand recall just how many years are required), then you may
have claim.

Can I move next door to you and operate an illegal CB radio with an old 250 watt tube linear? After about a week of hearing me on your television, stereo, telephone, and who knows what else, I doubt you will consider it such a minor problem. But, don't get excited, I'm only going to be your neighbor for the rest of your life (or until you're forced to move).

And don't think for a moment you're going to filter your equipment to get rid of the problem - my over modulated radio, and my old tube type linear, are so dirty it will take a dozen filters just to cut some of the problem on your television (after that you can worry about all the other stuff you own). Besides, don't waste your effort - a friend has a 600 watt tube type linear that I want and it is in even worse shape then the one I have now.

Cecil, only a person who has never lived next door to one of these "freebanders," or a person running an illegal setup himself, would attempt to minimize the problem like you did above. Since I don't believe you're running an illegal setup, I can only assume that you've never lived next door to one of these fools.

If they're using the same radio they use to "freeband" with, yes. The radio is either not approved for CB use or has been illegally modified to operate outside the CB frequencies.

> I don't condone violations of FCC rules.

And what are you going to do with all of the users those frequencies are already assigned to? I've seen a list of government frequencies (especially military) and there is very little free space available between the CB band and the 10-meter ham band. They all seem to be special use (used under specific circumstances), but they are assigned none the less.

Probably not. However I do respect the values of H.D.T. At least he broke the law for much better reasons than to get drunk or to make an easy buck.

>Good thing all those amendments came along abolishing slavery and granting
>women the right to vote or you still wouldn't have respect for women or
>Negroes.

You are way off base, here. Many people gave their lives in order to abolish slavery, and many of those that died weren't slaves. The right for women to vote wasn't granted because the government gave up chasing women out of the toll booths. These examples don't even compare to the actions of most radio pirates. There are right ways and wrong ways to change the law, but radio pirates don't even try.

In fact, freebanders do NOTHING to try and change the law except to whine about the FCC. I haven't seen anyone in rec.radio.cb, or anywhere else for that matter, make even a half-assed effort to try and change the laws regarding CB radio. That's because the collective mentality for freebanders is to "do what you want and fuck the law, at least until you get caught." They, like most criminals, want something for nothing at the expense of others. I'm sorry, Bob, but that just isn't an attitude that deserves ANY respect.

Tom W8JI wrote:

> They are also spreading to all other frequencies in the HF spectrum.

You really are "out of the know". Do you really think Freebanding CBers are getting smarter and they are all spreading out over the entire HF band? 99% don't even know anything other than "40 below" and "40 above". HF? Multiband antennas? Yeah right.

Most of the interference I hear on HF is cause by spanish speaking stations from Central and South America. I have no problem working around interference, with DSP and my highly tuned directional antennas. Perhaps you should upgrade from that G5RV and maybe come up with some ways to deal with interference, you know try to advance the technology or your operating skills. Nahhh....I would rather listen to you bitch on this newsgroup.

Bob.

Sideband, since Dan was talking about your suggestion of a new band for "freebanders," I think he was referring to "freebanders" when he said "a bunch of LAZY illegal fools." Since you insist you're not a "freebander," why would you get so offended by that? And he said you "must" be a liberal, not that you "are" a liberal. There is a slight difference.

Take the chip off your shoulder and you might not be so offended by what others are saying. You've raised a touchy issue in the ham radio community, so you should not be overly surprised that you're hearing a lot of strong opinions on the matter.

  Hear! Hear!  I've listened to 20 meters many times and have never
heard anything close to the garbage I hear all the time on the local
CB frequencies.  I have the obligatory CB radio in my SUV and I'm
actually embarrassed to even turn it on while passengers are in the
vehicle.  Even the worst of ham radio does not compare to CB.

The bottom line here is that "freebanders" are running illegally. No ifs, no
ands, and no buts about it. Illegal is just that....illegal. Now go take on
the day.

Well, I'm heard with a 2 watt carrier over 20 miles away straight shot,
so I must have done something right.

There were plenty of things to compete for kids' time in my era, too, and most
of my friends preferred them to ham radio way back then.

>There were two basic kinds of Novices back then. Those who
>bought off-the-shelf equipment and those who rolled their own,
>operators & soldering iron jocks, rather different critters and that
>gulf is clearly still out there.

The former were a much larger number than the latter, especially for the Novice class. I did not build my own rig.

>That whole build or die ethos has been lost of course.

I go to many ham flea markets and I see rows of dealers and individuals selling parts. I see hams buying them. They are doing something with them.

>I've done that several times recently. Nobody home. Dismal. My roots
>have died. Whatta shame.

Yeah, but keep in mind that the crowded Novice band made it very easy for us to go from 5 wpm to 13 wpm doing what is fun -- making contacts on the air. The ham of today has to do it with code-practice or computer drills, not nearly the same. If it looks different to that ham, it is because it IS different, and any old timer who tells him that learning code to 13 wpm is easy is not taking that difference into account.

Because I believe that more of the Technician Class did not become active on the air than the Extra Class.

>
> -SSB

For what it is worth, in my VE days in Wausau WI I went up to Merrill to administer an exam to a housebound man who for reasons known only unto him wanted DXCC before he died. I and my partners read an Extra to a blind man after a regular testing session in Wisconsin Rapids at about -35 degrees costing me a few bucks to get moving again.

I have a friend of many years standing who tried to learn code as both a left and right-handed activity at the same time and ran into a brutal 'hump' at about 6wpm. We had to literally tie his left hand in his belt, pump code into the right ear only, and such things to get him to do it only one way. As he holds an Advanced, it must have worked. This is not dyslexia by any means but 5wpm can be worked around.

I have long advocated the eventual outlawing of AM on CB freqs simply because it is nitro in the hands of children. To do this, it would seem that setting up a truckers band (FM, PL, the whole enchilada) to prevent these 'opinion leaders' into ownership mode instead of wandering farther afield would make sense. Adding a sideband segment might fit into this. Marine freqs are also plagued by this sort of thing. The early phone companies did not view pointless babbling and time wasting as valid activities either and lived to regret it. If your point is that we are making the same mistake I tend to agree.

Some years ago a university I happened to be attending built a new library. They installed a few paved paths in obvious places to get to it and waited a few years to pave the paths the students made. This was a simple and practical approach as opposed to putting them in right away and planting landmines to keep the students on the paths. As Flaubert, a French poobah, once said of taxation, the object of plucking a goose is maximum feathers with minimum hissing.

It's a simple law that you choose to disobey, you obviously think yourself grandiose enough to decide which law should be followed and which shouldn't. If you choose to disobey those laws what about others?

>
> Let me ask you this then, if you were around during prohibition (were
you?),
> would you have disrespected bootleggers and consumers of alcoholic
beverages

You are getting the idea ... why respect criminals ??? I'm pretty sure you don't go to local penn's to drop off stuff for the criminals inside (as you would call them ... "good buddy")

> Good thing all those amendments came along abolishing slavery and granting
> women the right to vote or you still wouldn't have respect for women or
> Negroes.

If a law is wrong lobby to change it ... don't sit back in your homes breaking it every chance you get ... and please don't ever compare yourself to women and african americans of back then ... you are not oppressed.

The test is a joke ... I did mine when I was 11 with a grand total of about 2 weeks of studying for it (on my own I might add) ... its 100 questions multiple choice (up here anyways) and is general knowledge any operator should know.

The only thing stopping you from operating legally on the ham bands is your ignorance and your spite for rules and regs.

I didn't know this went on. Kudos to you, Dick. Highly commendable.

And I'm still trying to work around it, only my "hump" is right at about
2 WPM.

Actually, Dick, you just reminded me of this precise point, which I had
wanted to make, yet had forgotten to.

AM is a volatile emission mode, IMHO. Of course, FM isn't much better; if the deviation is turned up too high, it "bleeds over" just as badly as over modulation and carrier instabilities bleed over on AM. I prefer sideband for a multitude of reasons. This is one of them.

> Some years ago a university I happened to be attending built a new library. They installed a few paved paths in obvious places to get to it and waited a few years to pave the paths the students made. This was a simple and practical approach as opposed to putting them in right away and planting landmines to keep the students on the paths. As Flaubert, a French poobah, once said of taxation, the object of plucking a goose is maximum feathers with minimum hissing.

If you're speaking of Calvin College, in Grand Rapids, MI, I attended the same School. Escher started this trend when the school was designed and first built, in keeping with his ideals of letting his buildings flow with nature as much as possible.

>
> Dick N�BK

Basically, CB needs to be revamped. CB'ers need to be educated about what's "loud" and what causes interference, what "gets out" and what bleeds over. Modes need to change, and bandwidth needs to be reallocated. Leave 1-40 for the AM'ers, and set aside a band for FM and a band for SSB either above 40 or below 1. There are some unallocated frequencies there, I'm sure. I DO NOT want to make HAMs give up any more bandwidth, and I don't want to take seldom used emergency frequencies from other services, but the whole of 27.405-27.800 can't be allocated.... at least I've never seen a chart that shows anything allocated in that area. (Maybe someone has a URL to a chart/page that lists all allocated frequencies?)

I regularily do simplex on the bike from more than that with a 2m ht with 1/2 watt out ... big deal. I drive to the fiancee's place 50miles from where I sit and chit chat back and forth with my father on 10m with 10w output on ssb ... so what? I use a 1/4 wave antenna mounted on the trunk of my car ...

>What you are saying Sideband is You are asking for a band that is set aside for SSB only use, between certain freqs And you think this might help the congestion, well this band already exists(27.405-27.999)and people are using hundreds of watts with rules and regulations already in place and they are not respected and are ignored, They already have this band yet they still come on 10m. What will be any different then. We should be thankful the FCC hasn't pulled the plug on 11m it is more trouble than what its worth. One day they will cut their losses and axe 11m.

Ten emeters is already ruined, for the most part. There are SSB operators and truck drivers all over the low end.

It is happening on 160 meters through ten meters, and even in the two-way land mobile bands.

We don't need to reduce code requirements, or expand bands. The idiots operating "freeband" are taking care of it all on their own. They have no respect for anyone else, and demand we accept them and respect them for ruining whatever frquencies they choose. And the SSB ops are the worse of the lot.

What a joke.

OK, Hansel...if you need to extricate yorself from this with some dictionary definition to justify your NON-answer, then be my guest.

However like most other applications of a term or definition in the English language, this one too can be interpreted in more than one context.

Nothing stops me from acting professionally although the "strictest" definition of "professional" in YOUR application does not exist.

Your ranting notwithstanding, I did extend them the "professional courtesy" of dealing with the problem in the manner that I did.

You have still not answered the questions, however, and I guess I did not expect you too.

You haven't got the guts.

(1) Was the information incorrect?

(2) Could failure to correct the situation NOT have cost the department NAL's had the FCC sought to do so? (of which MY taxes would have been used to pay any fine)

(3) Do I not have the right to interact with local government when something I know to be wrong is occuring?

>By definition, an "amateur" cannot extend a "professional courtesy".

Perhaps YOU can't, Hans. I CAN.

>Good luck on this one now!

No luck needed here, Hans. You have made it too easy this time. As you ususally do.

Answer the questions, please.

The Gunny

What a laugh. You think a DSP filter will remove SSB or AM from over
CW?

Get a clue about how filters work.

A narrow signal can be removed from a wide one without affecting the wide signal much, so a very strong CW signal can be removed from a weak SSB signal with little ill effect on the SSB . The converse is not true.

As for your "higly directive antennas" that doesn't work unless the direction of the signals is quite diferent.

The point is the free banders are causing problems, and it is getting worse year by year. Most people who operate HF legally, especially CW, know that.

BTW, what is you callsign?

73 Tom

Dwight Stewart declared:

> Again, CB enforcement (not local enforcement - CB enforcement as
> a whole) will be a joint effort involving both local law enforcement
> AND the FCC.

"Earth-to-Dwight, earth-to-Dwight, come in Dwight!"

There is a perfect 8-letter word to describe your statement above, and the first four letters are B U L L.

FCC hasn't "enforced CB" for about a quarter-century, and now they are even LESS likely because they have a perfect excuse to pass it off as a local issue.

Good luck on this one now.

Do you really feel laws are an imposition, Bob? Are you referring to all laws or just the ones you happen to disagree with at any given moment? And, if you truly feel that laws are imposed on you by a government, what system of laws would you prefer instead - no laws, only the laws you agree with, only the laws I agree with, or something else? This "evil, big brother like, government forcing it's will on the people" nonsense is getting a little boring, people. Please do try to come up with something more creative and more accurate.

> Let me ask you this then, if you were around
> during prohibition (were you?), would you
> have disrespected bootleggers and consumers
> of alcoholic beverages up until the very
> point where the 18th amendment was repealed?

I have very little respect for those who blatantly violate the law and that would hardly change just because the law was later changed. In my opinion, that individual would still be a person who is willing to break the law and I could never really trust a person like that - once a person has chosen to break laws, I could never be certain what law that person might choose to break next. Now, please note I'm not talking about minor crap like spitting on the sidewalk or speeding. I'm talking about major laws like prohibition was in it's time, or the federal laws governing radio are today.

> Good thing all those amendments came along
> abolishing slavery and granting women the
> right to vote or you still wouldn't have

> respect for women or Negroes.

Oh, come on, Bob. It is a little absurd to equate "freebanding" with slavery or the women's suffrage movement. The three are not even in the same ballpark.

Right. And these considerations were basically why I supported a 5wpm General, with expanded privileges. And an effective written test that assures some minimal level of learning.

If you allow me to nest for a certain number of years without protest, and it is I and not you who does improvements to the property, I can go to court and obtain ownership of the property. Certain conditions must be meet and your property becomes mine.

This doesn't necessarily mean that an increase in one automatically and simultaneously causes an increase in the other. Read Dwight's post again.

AFTER the increase in alcohol use/abuse there was an increase in drug abuse.

One thing that I will note --- there hasn't been a decrease in either.

Kevin, WB5RUE
Why use a big word when a diminutive one will do?

What gave you the idea that I consider it a minor problem? I don't
consider illegally driving on the shoulder of the road to be a minor
problem, do you? Bicyclists can die because of that problem. Do you
care about the RF emissions of freebanders more than the lives of
bicyclists?

>   Cecil, only a person who has never lived next door to one of these

On a scale of crimes, is freebanding a minimum offense compared to
rape and murder? If you shoot the freebander, who would be in the
worst trouble? I am not attempting to minimize the problem, Dwight.
I am attempting to put it in perspective.

Seems you are the one who has minimized the problem of people illegally
driving on the shoulders of roads, putting bicyclists' lives at risk.

I have never received a speeding or any other traffic infraction. I have never received a warning. I never speed. I always use my turn signals/mirrors/shoulder check when turning and changing lanes. There is no need to. I always give myself ample time to get anywhere. I have never received a parking ticket either. Speeding is stupid AND illegal.

Illegal drugs present problems for society. I believe the set of problems
that illegal drugs present for society is more severe than the set of
problems legal drugs present for society. You believe the opposite.
What we are arguing over is the lesser of two evils.

It's been so very importantly pointed out many times in this NG that things stated as facts should have true statistical reference. I am just wondering what references Dwight may have used--since his statement seems so factual. I also wonder if the references are available on the WWW. They would be interesting to review--because my *opinion* has always been the opposite. Maybe I should change my opinion--but not just because "I read it here."
:)

Yeah, they are call Ham Radio Bands, and all they need is a Ham Radio License like the one your getting. If CBers want to shoot skip, then let them get a license too. I doubt you had any big problem getting your

license. The written exams up to a General are easy, and for those who want
H.F. the 5 wpm code test is a reasonable speed until the requirement is
eliminated.

What you propose to do is if the FCC can't enforce the rules, then heck,
lets just make it legal, just like the folks who want to legalize drugs. The
only problem with that is where does it stop? Today 26.965 -27.405, tomorrow
26.965 - 27.800, ? 26.965 -29.700, 12m - 10m, ..., you get the idea. 8-))

There is a major difference between something that is simply unsightly, and something that is dangerous.

Freebanding is closer to the example of driving on the shoulder of the road...or the wrong way on a one-way street....or driving without a license...than it is to littering.

If you don't think it has caused problems, look at virtually ALL of the HF amateur bands and many commercial bands. The free-band idiots have ruined commercial services above and below 27 MHz, and are now working on all other frequencies. It ranges from 160 meters up into the two-way land mobile bands.

This is where enforcement come in. What we need to do, is catch a few of them and fine them. If we find a few who fail to comply after repeated warnings, we need to send them to jail. If that fails, we need to execute them...and if that fails, we need to force them to live with N1IR for a week. Eventually they will get the message.

So you're saying that its up to each individual to decide which laws they
should obay?
If you can't see a problem with that then a jail cell is probably going to
be your next place of residence.

You live in town but you purchased 20 acres of land out in the boonies with the idea of maybe moving there when you retire in the future. I come along and see your land and I don't see a house or anyone using the land. I observe this for a short while and come to the conclusion that no one is using this land. So I build a little shack there, plant my garden, run a cow or two. Is that OK with you? Don't I have a right to do that? After all, you aren't using it. Maybe I am doing something illegal, but after all, why should you object, you aren't using the land and I am apparently hurting no one and there are others committing much more horrendous crimes. Maybe instead of coming out and trying to get me off your land that you aren't using, you should spend you time protesting real crimes.

As Charlie Brown would say, "good grief". There is always someone who spouts this to try to compare the ham bands to cb. Have you listened to such and such band, such and such frequency? No one argues that there are morons on the ham bands who act like cbers and on certain frequencies you can find them, but on 99.99 percent of the other frequencies you find hams obeying the rules and engaging in courteous communication. Even with the few morons on the ham bands, there is no comparison between ham radio and cb. It's like comparing apples to a sewer pit.

Yes - at least one: The person in charge of the local civil defense organization is usually an employee (of the municipality or county government, in its emergency preparedness unit), and thus, paid.

Remember that the "trustee" of a RACES station need not even be a licensed amateur. He only need be a member of the CD organization that applied for the license. Take a look at the trustees of the few RACES licenses that still exist and tell me, what percentage of them work for that city's/county's emergency preparedness department as employees. In order for the CD organization to be what it is, it must be government sponsored, and that means at least one paid member of the organization (the head supervisor).

I'm NOT saying that ALL of the participants under a given RACES license are paid. There are volunteer amateur radio operators in most of these organizations as well. Also, when operating in RACES, these operators are NOT considered as simulataneously operating in the amateur service (cf. WWII operations, which RACES was born out of).

ARES need not have any government affiliation whatsoever. Some ARES groups perform their services incident to private aid organizations such as the Red Cross.

Obviously, you have had your head in the sand, Stewart. (Well, since you're going to address me by only my last name, you deserve the same.)

There have been cases where police have arrested licensed amateurs just because their radios were capable of receiving the police department's allocated frequency. Just how do you think the question posed in FCC ruling 93-17 originally came about?

One situation that comes to mind was in Loudonville, NY (Albany area) about 2-3 years ago. This was reported on "This Week in Amateur Radio," and it is not an isolated incident. It turned out that the police were overly paranoid because they believed that the suspects in a robbery were using scanners to evade them. However, in that situation, they arrested a licensed amateur (who had nothing to do with the robbery) simply because his amateur transceiver could pick up their frequency. He was originally stopped for a minor traffic violation.

About 8 months later, there was a similar case somewhere in the "South" (Georgia, I believe, but I could be wrong) involving a teenage (17-19 years) who was also involved in ARES. He was also originally charged with "impersonation of a government official" (his ARES organizational title), but all charges were dropped later and his radio returned. Again, this was because his amateur HT could pick up the public safety band and in this case, the cop heard his own voice come out of the licensee's radio.

So, you were saying that "no cop ... is going to get that aggressive ... [or] overreact simply because [of] a scanner." I think it's time for you to return to reality.

AH! That's the one I was thinking of when I believed it occured in Georgia.
Thanks.

I missed it because I did not receive it.
I look back through thread and can not
find the message. How did you get the
message and I did not?

Who is nq-fi1.aol.com?

This will be my final post on this thread.

Reply on a new thread, I will find it evenly.

Larry KC8EPO

  Lucky (and rare) is the paid emergency services professional
  whose sole assignment is RACES.  If the rest of the RACES
  organization does not include a very large dollop of
  amateur-licensed volunteers, the RACES structure will crumble
  and blow away.  The paid professionals' services are too
  valuable (and costly) to have them do routine radio operator
  tasks.

>I'm NOT saying that ALL of the participants under a given RACES
>license are paid.  There are volunteer amateur radio operators in
>most of these organizations as well.

  At one time, non-amateurs could be operators at RACES stations.
  That was dropped many years ago.

> cf. WWII operations, which RACES was born out of.

  RACES was born from "Civil Defense Radio", not exactly the same
  thing as the "Wartime Amateur Radio Service" of WWII fame, but
  close.  I first started in "CD" as a college student in NY in the
  mid-50s, before RACES was organized, and we operated on non-amateur
  channels.

El Presidente has announced that he intends to split the INS into two agencies - one that deals with immigration and naturalization paperwork and the other that does enforcement (the Border Patrol).

Those of us in FCC field enforcement have advocated that sort of split for the FCC for decades. Once freed from the "who gets a license and which non-technical rules apply to whom" political mess (which is the only "FCC" that The Congress can comprehend), real enforcement can be done when the technical standards and enforcement functions and people are absorbed into NTIA which has

```
  scads of funds. The Canadians did that several years back when the
  functions of the Ministry of Communications were split between
  Industry Canada (the equivalentof the Department of Commerce, home
  of NTIA) and the Canadian Radio and Television Commission (CRTC).

>If that fails, we need to execute them...

  You are certainly making the jest, eh????

>and if that fails, we need to force them to
>live with N1IR for a week. Eventually they will get the message.

  Hey, Richard Burton in Southern Cal has been prosecuted six
  times, spent time in jail three times, and still operates on
  ham radio without a license whenever he gets out.

  When is HE going to learn?

Did you not suggest a band be set aside just for the illegal idiots? They
you should be able to figure out my response.

The SATs having to do with it is....the lowering of the bar. The reduction
of standards to accomidate some person and/or group that is unable, too
ignorant, or just STUPID. See my point?

Also there ALREADY exists plenty of places to work DX and have fun. Its
called Amateur Radio. Unfortunatly without a valid callsign you will be
attacked much worse than here.

Bill's posting hasn't made it to my server. Someone must complain for a cop to need to do anything about a problem. With my antenna farm, the cops would know exactly where to start their investigation. CBers, like hams, are not likely to run high power with a stealth antenna.

People like you still suck!!!!

You are the "gimme" generation and have no respect for what others have
worked for.

What you are to stupid or lazy to earn, you take for free...

I proudly repeat.... People like you still suck!

Dennis Stahr

That's exactly the way it is. Everyone decides which laws they should obey.
Lot's of people decide to obey them all assuming they know about them all.
Some people decide that they shouldn't obey the speed laws. Have you
ever driven faster than the speed limit? I personally don't like and
rarely wear a seat belt even though it is illegal to do so. Technically,
I am also in violation of the Texas motorcycle helmet law.

You picked a bad analogy. A person did just that on some land in my
home county of Madison in Texas. Nobody noticed him living there.

After N number of years he was discovered. The case went to court
and the trespasser was awarded the property under the Texas homestead
laws. So you better keep an eye on your property or some homesteader
will wind up owning it. Homesteading is a good description of what the
freebanders have done between the CB band and the ham band. Time was
when amateur radio operators homesteaded the radio frequencies.

Some people like jail. For those people, we send them to Boston and let them build Fractal antennas under the direct supervision of Dr. Nathan Cohen, pHd.

The problem with your logic is you are using land that is being used.
Freebanders are screwing things up for licensed services, and have
been for years.

They are just to stupid or uneducated to understand that.

Sorta like the mentality that thinks it is OK to "borrow" things, like
someone's property or land, without asking because "they aren't using
it".

Larry:

This particular Sony is 17 years old, and there's nothing much wrong with
it except for around 4" of rollover at the top of the screen. However, I
wanted
to replace it with something with more up-to-date features -- now I have a
new 20" JVC.

>I believe that Amateur Radio has much to offer to our education system.
>Unfortunately, we are arguing among ourselves, instead of contributing
>to the next generation.

I don't disagree with any of that. The problem with ham radio and young
people is the fact that in order to participate in a meaningful way, the
kid needs access to a capable station. This means that money needs
to be spent on rigs, towers, antennae, etc. to establish a station at the
home QTH. Without that, there will be no ongoing participation at a
school or "club" station due to the inability to accommodate more than
a very few truly "active" participants at a time. Unless the parents are
well-heeled or are also hams, the resources to create a ham station usually
won't be there -- especially if the kid already has all the requisite
computers,
TV's, DVD's, game toys, etc.

>What I would really like is a 200mhz plus scope. You can show the kids
>your radios, but if can show them an image of the actual RF signal you
>can open their eyes to a new world of underrstanding.

I'd like a 200 MHz plus scope myself -- if for nothing else but to learn
what the heck to do with one!

The logic of my post, I assumed I could "borrow" the property without asking because it was apparent that "they aren't using it".

I picked a good analogy, I have no right to use his property just
because I observe it does not appear to be in use by the owner.

Borrowing something that isn't yours without asking the owner is
called "theft", but I guess we all have different morals.

Take a listen to ten meters, and tell me freebanders haven't cause a
big problem. Not only have they driven legitiment users off the
commercial areas around 27 MHz, and ruiened things for the R/C people
who used to use adjacent-to-CB channel  frequencies, they are now
ruining ten meters.

They are also spreading to all other frequencies in the HF spectrum.

Dan:

Well, apparently you missed the point; or is it that you choose to ignore it? Either way, your attitude towards me on this is a bit disconcerting. I'll state this again just in case it didn't get through the first time" I'm not a freebander, nor do I encourage ANYONE to violate FCC rules.

I'm sorry to hear about your mood disorder.

The point was this: Set aside another band for sideband transmissions only, to help alleviate some of the congestion on CM (they have no other place to go), and perhaps the encroachment on 10M frequencies would tone down; perhaps those frequencies between 27.405 and 28.000 that are allocated to other services won't be interfered with people calling CQ, and perhaps sideband operators on CB's won't get interfered with as much by AM carriers.

I'm not proposing a reduction in standards. Personally, I feel when the FCC removed the licensing requirement from CB they made a BIG mistake. I'm proposing a broadening of bandwidth to help alleviate the congestion on CB that causes people who don't know any better to venture onto the HAM bands and interfere with licensed operators. If the bands weren't so congested, CB'ers might not feel the need to run an amp, because they'd be able to make contacts on much less power.

If you're so shortsighted that you don't see the potential good this could do, then I'm sorry you feel that way.

Will some idiots out there still run illegal power? Probably. Will people who don't know any better still venture out onto bands and frequencies where they don't belong? Probably. Unfortunately, without a licensing requirement, the lack of knowledge by CB'ers helps cause this problem.

This is just my opinion. Your mileage may vary

So you're saying that HAMs are licensed to operate between 27.405 and
28.000? Wow! When did that happen? News to me. ::grimace::

> I doubt you had any big problem getting your
> license. The written exams up to a General are easy, and for those who want

Actually, I don't have my license yet. I go for my written tests next
week. I've been studying code for over two years (see the other thread:
Ticket test suggestions for more info on this) without much result. I
won't go into that rigmarole again here. It's already in that other
thread.

>

That's a bit reactionary, Leland. I don't think legalizing drugs is an
option. I don't see the connection between the two.

I'm proposing additional bandwidth for a particular mode of operation in
order to help alleviate some of the congestion on an already overtaxed
and overused band, which may just help to reduce the encroachment by
unlicensed radio operators on HAM bands.

Again, It's just my opinion. Your mileage may vary.

There has to be more to the story, Jerry. Was there a specific ban on scanners at this particular event? Was the ham doing something to attract attention to himself? Anyway, without the full story, all I can go on is my own experience and observations and I haven't seen any aggressive tendency on the part of the cops to go after scanner users. In fact, most of the scanner cases I've heard about first involved other offenses. As for myself, my Explorer looks like a porcupine with all the antennas on it (scanner, ham, marine, etc) and I've never experienced any problems with law enforcement. In fact, I've recruited a couple of law enforcement people into ham radio following discussions about my equipment. So, while I'm sure isolated events like you describe happen, I just don't see this as a major problem that the majority of hams should worry about.

Who did that, Len? I recall a fellow who said that those that were not active probably wouldn't renew.

Can you explain?

Someone transmitting with legal power levels on the legal 40 are not breaking the law they are also not freebanding. They are operating in a proper and legal manner as prescribed in the regulations. Any other operation is illegal without FCC/NTIA authorization. No more no less.

One of the objectives of the creation of the GMRS Class D (i.e. Citizens Band) radio service was to provide low cost licensed radio communications for small businesses and family communications. This service was to be limited to 50 miles from the transmitting station and to a maximum power input of 5 watts. This was later changed to, I believe, 3 watts output. Modulation started out as AM phone only and changed to include SSB. For a special channel to be assigned which allows the use of more than 3/5 watts would be in violation of this principle.

Ed:

I can see how the ARRL and their QST advertisers -- the equipment manufacturers, would see it that way! And, as always, if you follow the money, you learn the truth! My personal belief that it's the League and the equipment manufacturers FIRST -- and the ARS and hams themselves -- nowhere!

Where is it written that the United States needs more than around a half-million hams in order for the ARS to remain viable? Where is it written that we have to selfishly, greedily hang on to ever possible kHz of spectrum allocated to us? Where is the sense in that -- considering the absolutely nil commercial viability of our "service?" And how would having, let's say, twice as many amateur radio licensees (note I didn't say "hams") in the FCC database change that reality? Would that automatically lead to major new inroads in amateur communications technology -- as has always been touted as the primary reason to eliminate meaningful Morse code testing standards? Would it lead to the building of a national network of interconnected "cells" on the ham bands above 1 Ghz -- this giving us hams the equivalent of coast-to-coast addressable cell-phone service for the price of another HT handie-toy and maybe membership in a local radio club?

How many hams does it take to do everything imaginable in ham radio -- and what does it take to get them? Keep in mind, amateur radio licensing standards -- even at their most "difficult" levels with

regard to code and theory testing -- have always been achievable
by people from all walks of life, with or without professional
technical training and experience. Now that they're dumbed down
to total insignificance, we're still not seeing any meaningful growth.
A one-percent increase in the first year of the post-Restructuring
era? What's up with that? Even I expected around ten percent --
and I was going to admit that I was totally wrong about code testing
if we got 20 percent. HA!!! All we've seen is that code testing
had NOTHING to do with growth -- or lack thereof -- in the ARS.
If I were anyone of any significance at the ARRL -- I'd be
campaigning for fill-in-the-application-and-send-it-in-to-the-FCC
type licensing for at least the Technician-class license, because
that's about the ONLY way you'll EVER see any "growth" based on
the relative lack of effort required by the licensing process.

Healthy growth in the ARS is probably not going to happen -- not
to the expectations or satisfaction of anyone involved in any sort
of "official" capacity. And -- we're going to lose spectrum -- big
time -- in the critical region above 500 MHz. No amount of
"growth" will stop that. Giving away privileges that are mainly
centered in the HF and lower VHF region is a meaningless
gesture -- since the threat there is virtually non-existent. To answer
the question -- sure, seeking more hams is generally healthy for
the ARS. Unfortunately, by proving our lack of worth by lowering
licensing standards, we have taken careful aim at our "growth"
target and shot ourselves right in the big toe! If we get ten percent
TOTAL growth in the next three years, I'll gladly eat my words
and another lobster dinner with you!

In article <9cs7mu$31f$1@usenet01.srv.cis.pitt.edu>, szekeres@pitt.edu (GregS) writes:

>I think all people should have rights to portions of our bands,
>with only a price of a ticket.

Greg:

I agree 100 percent. I think we should immediately go to completely testing-free licensing for the Technician class license. Fill out the application blank, pick a Vanity call sign (if desired), and send it in to the FCC. While you're waiting, you can yak on the local repeater using your initials and your Zip Code as your call sign. With a system like that, at least the sloppy, awkward, hopelessly clueless new Techs on the air won't have the right to claim that they "earned" their privileges in any meaningful standard -- which never was the case anyway.

>That in no way stops advanced levels
>of testing from having special privileges. Heck, its more fun to talk
>with the public on FRS, than trying to talk with a bunch of old buzzards
>on ham radio. Don't even need an FRS license.

As someone who has tried to talk to the public on FRS, I have only one question -- how do you get to do so? I monitor FRS ch. 1 full time using the extended receive feature of one of my ADI AR-446 transceivers. Nada. Once I did hear someone sending calling tones, so I grabbed my Icom IC-4008A and tried to call back -- but all I got was a childish giggle followed by dead air. Now -- THERE's real communications excitement for you!

>You just go to the store and your on the air.

Right. The only problem with FRS is that the rigs truly only work in pairs. My brother and I use 'em to coordinate our activities while doing long-range rifle shooting. Beyond that, they collect a lot of dust.

>I got interested in radio because it was interesting to me. Opperating CW
>is always the best in fun and enjoyment looking back.

Same here -- although I also get a big bang out of the digital modes. But there's nothing like the challenge of "digging out" a QRP QSO on 40 meters using CW. That's what ham radio is and should be. Yakking into a microphone to the same people day in and day out is the most deadly boring thing I can think of -- and those who do so are the most dull, unimaginative, and uninteresting people I can think of. However, that's exactly what the majority of prospective hams want to do.

>Whatever it may be,
>the newcommer must have something to interest them, and I don't really
>see much there today. Too bad you don't need a han license to opperate

>the internet!!

How much do you want to bet that if some sort of license WERE required to get on the 'net, that there would be millions of people eagerly lining up to buy the study guides and take the tests?

Additional comment:

Will a tester come out to an invalid's house in order to test them? If not, how would someone who cannot leave the house get tested to attain their license?

I've heard the "if you want to DX and run power, get a license" argument ad nauseum. Some people are incapable of passing a code test due to dyslexia or other disorders. Some people are incapable of even leaving their house. How do those people attain their license?

No. Two 5/8 wave loaded antenna's do not make a 1 1/4 wave dipole. They
make a dipole composed of two 5/8 wave loaded antenna's. This
configuration will not make a truly efficient antenna. Read up on
collinear antenna's and dipole antenna's. You will see that what you
have is nothing. However for you sake I do hope it works to your
satisfaction. I prefer something else...

Kentucky law prohibits scanners ANYWHERE except in a person's
home. You can not have a scanner on you while outside your
home without a special police permit. KY ST s 432.570

>Was the ham doing something to
>attract attention to himself?

As I recall, he was just there and the police overheard
their own transmissions on the guys scanner or HT.
I believe since that incident, KY may now exempt
amateurs from such enforcement.

>Anyway, without the full story, all I
>can go on is my own experience and observations and I haven't seen any

They use it as just another means to an end when they
want to.

> In fact, most of the scanner cases I've heard about first involved
>other offenses. As for myself, my Explorer looks like a porcupine
>with all the antennas on it (scanner, ham, marine, etc) and I've never
>experienced any problems with law enforcement.

Most states do NOT have such laws to begin with. I don't know
the current status, but the following at one time did prohibit
scanners in autos and/or other places: CA, FL, IN, KY, ME, MI,
NE, NY, ND, OK, RI, SD, VT, WV.

NJ used to also BUT we got the law changed in 1994.

> In fact, I've
>recruited a couple of law enforcement people into ham radio following
>discussions about my equipment. So, while I'm sure isolated events
>like you describe happen, I just don't see this as a major problem
>that the majority of hams should worry about.

If it happened to you it would be a major problem.

Cheers,
Bill K2UNK

  This is a classic case of "adverse possession", a gem of
  Anglo-American real property law.  After X number of years of
  use of the property without the owner objecting or otherwise
  attempting to oust them, the user gains ownership of the
  property.  The number of years varies from state to state, and
  there's a bunch of loopholes if the owner is unable to inspect
  the property for a number of reasons.

  "Homesteading" is something else, starting with lawful
  occupancy.

In Anglo-American common law, theft requires an intent on the part of the thief to deprive the rightful owner of the property in question. If there's no such intent, it's called misappropriation or unlawful possession.

Don't know about other states, but in Texas you have every right
to use property that does not appear to be in use by the owner.
If you use it long enough, it legally belongs to you.

Sorry if you were offended by my use of your last name. However, since that is all that you have offered for identification, that is all that is available to me (unless you want me to call you "D"). And I don't have my head in the sand - I'm just not an alarmist (see below).

> There have been cases where police have
> arrested licensed amateurs just because
> their radios were capable of receiving
> the police department's allocated frequency.
> Just how do you think the question posed
> in FCC ruling 93-17 originally came about?

I'm sure there are isolated cases that you could point at, but I'll repeat what I've said all along - these are isolated events, not a major problem that the majority of ham operators need worry about. Every single day, many thousands of ham operators leave their homes with HT's hooked to their belts. They head off to work, the mall, the grocery store, the beach, community events, government buildings, and a thousand other places in their daily lives.

With that in mind, the fact that you can name one, or two, or even ten, isolated incidents over a period of several years is simply not that big of a deal. This simple fact remains - the overwhelming majority of ham operators will never experience any problem whatsoever with local law enforcement concerning their equipment. And, when it comes to that tiny minority that might experience problems, I suspect that only a small percentage of those will have any problems relating to future HR-2346 enforcement.

Again, for 99.9 percents of the operators out there, the isolated examples you gave are not even an issue in their lives. Therefore, you're going to have a difficult time convincing me, and I suspect many other more level headed hams, to oppose HR-2346 enforcement based on a somewhat alarmist view of law enforcement relating to this issue.

> So, you were saying that "no cop ... is
> going to get that aggressive ... [or]
> overreact simply because [of] a scanner."
> I think it's time for you to return to
> reality.

If you're going to quote someone, at least do so accurately. My exact sentence was, "No cop in his right mind is going to get that aggressive, or that excited, over a simple radio violation."

Exactly, my "borrowing" would be nothing more than theft. Just like the
freebanders "steal" what they called unused frequencies. It is beyond me
how they can expect anyone to have respect for what they do..

Yep, freebanders (illegal operators) have intruded into the 10 meter band,
and other frequencies,  and are causing problems. I on occasion have
caught an illegal operator on 10 and when challenged often the response
is, "well, we didn't hear anyone on this channel so what does it hurt?"
Typical of my analogy... no one is using it so I guess I have a right to
take it.

Most states either amended their sbanner/receiver laws or adopted new ones to prohibit possession and use in a vehicle (or otherwise) if used with criminal intent or to interfere with lawful public safety activities. The ARRL preemption does not apply in those cases, BTW.

In the Kentucky case, IIRC, the police noticed their tramsmissions coming out of the ham radio because their vhf mobile was overloading the transceiver front end, and from that declared it a receiver "capable of receiving police transmissions".

That's the kind of "conclusion" that we're afraid will erupt if local officers - with little or no knowledge of audio rectification and front end overload - get into CB enforcement.

  The answer is yes.  Even back when the tests were only given
  at FCC examination points, special arrangements were always
  made for folks who could not travel or who were blind or
  partially deaf.

"Close" only counts in hand grenades and horseshoes.

The maximum distance figure was (and for all intents and purposes still is) 150 miles.

The transmitter power was originally defined as 5 watts DC input (AM). This was later redefined to 4 watts carrier output (AM), 12 watts PEP (SSB). No change for all intents and purposes.

Did I say otherwise, Bill? Again, CB enforcement (not local enforcement - CB enforcement as a whole) will be a joint effort involving both local law enforcement AND the FCC.

> Sure they will. Thankfully, however, no city or

Give it time, Bill. The legislation was only signed into law a few months ago. I don't expect to see the first local laws relating to this for another year or two.

Obviously, Hansel Brakob is a racist.

Not that I am surprised

>For the third time, Steve -- pay attention here now - I'll type slowly so you

>can keep up........

>NO

Hansel, I have gone through the other posts and I have yet to see where you posted that response the other "two" times.

But you have yet to answer the OTHER two questions directly. I will type THOSE slowly so you can fully comprehend the question being put to you.....

(1) Could the FCC have NOT issued an NAL, >>if they so chose<<, for the problems cited had such conduct NOT been corrected, and:

(2) Do I NOT have the right to address matters of impropriety when it pertains to local government matters?

So far you have only answered 33 1/3% of the questions. You CAN do better.

>Now go soak your head. You're boring me.

I have no doubt that I am. I am holding your feet to the fire to answer simple, direct questions with simple, direct answers. You don't like it that I don't submit to your bullying, so you become MORE insulting.

YOUR posts and answers to OTHER posts was to call me a "radio cop" and make other insulting remarks.

Very professional. Very mature. Of course YOU are one of three people (the others being Larry Roll and Lennie Anderson...THERE'S a combination!...) who presume to tell me what is acceptable and responsible while at the same time being yourself profane and insulting.

Now...be a nice boy...cut and paste the questions I placed before you and answer each one in turn. "YES" or "NO" are acceptable. Digress if you like, but it only exacerbates your humiliation.

Now have fun with THAT one, Hans!

A law is either good or evil, Dwight. When a law is changed, was it
good before and evil after, or was it evil before and good after.
Either way, it was evil sometime. I advocate getting rid of evil
laws.

We have very different views on what the purpose of amateur radio is and should be. IMHO it is *primarily* recreational, not commercial or anything else. The once important need for "a pool of skilled operators" has been long negated by technology, as has the ability to write software in machine languages. Whatever "the service" once was and however much we may miss the good old days, both are gone; swallowed by time. Amateur radio is now a hobby, pursued for recreation and it's portion of the spectrum is now set aside for the people to enjoy in much the same way that portions of our public lands have been set aside. If we also provide other services whilst enjoying radio that's icing on the cake.

From that viewpoint, which I understand many reject, the more people enjoying the spectrum allotted to us the better because if it isn't very heavily used for *recreation* it will be diverted to other uses; and as you say rightly so. Gone are the days when MARS and RACES provided services important enough to justify the service on their own. Today, the kid on a ship whips out a cell phone to call mama and Amateur Radio has become a park for hobbiests to enjoy but if nobody ever goes to a park we might as well use the land for a shopping mall or parking lot and ditto the spectrum.

Since I enjoy radio as a hobby, I'd like to see it not only stick around but expand and to do that people have to be seen "visiting the park"; and the number of licensed amateurs is one indicator of how many are doing so. My desire to see the hobby grow happens to coincide with some mfg.'s desire to sell equipment, but that hardly comprises any evil conspiracy.

I perceive Morse from the same viewpoint. If enough people enjoy

using it then by all means reserve spectrum for their enjoyment!
However, requiring others to pass a Morse test in order to
pursue other aspects of out hobby is akin to requiring everybody
to demo skill with flint and steel before they can go see Old
Faithful.

I said "a" point, not "the" point, an important difference.

> Yes, alcohol is a major problem for the family, but we cannot so quickly dismiss it's effects on society (DUI, lost production, on the job accidents, and so forth). Drugs, even if legalized, present the same problems for society.

No arguement! The point you miss, or avoid, is that while all you say bad about booze is true, all of those ills pale compared to the evils of prohibition itself. We *may* have had fewer alchoholics during prohibition, altho that's arguable, but we had innocent people being caught in the crossfire of shoot-outs between bootleggers, police harrassment of ordinary citizens, rights given up in hope of security; in short all of the ills now associated with the WOD but no longer associated with alchohol. I emphatically agree that " Drugs, even if legalized, (would) present the same problems ..." as alchohol does but we wouldn't have people being robbed and murdered so addicts could afford drugs because drugs would be as cheap as wine. We wouldn't have little kids and their grandmothers being killed by warring dealers because the dealers would be settling their disputes in courts just like liqueur store owners. We wouldn't have police and innocent bystanders being, not to mention addicts and dealers being killed in drug raids. All that'd go away just like it did after prohibition, leaving us with manageable social problems.

>
> Still more importantly, contrary to the popular myth, the illegal alcohol trade did not decrease after prohibition either.

That's because prohibition didn't end abruptly. Many states and localities continued to outlaw alcohol, especially "by the drink" until well into the 1970's and a few still do. But when's the last time you read of a kid being shot in a fight over illegal alchohol distribution, or of a wino killing anyone for the price of a bottle of Ripple.

>
> So, in the end, the premise that drug legalization will reduce the problems associated with the drug trade, or the problems associated with drug use, is simply not supported by our experience with prohibition.
>

That's not true. Our experience with prohibition demonstrates that legalization will not remove *all* problems but clearly shows that legalization will practically eliminate the ones that affect *me* and most other people who do not abuse drugs. It will not reduce the # of addicts or help their families but it will eliminate the need for addicts to rob and kill to support their habits and it will minimize the assault on our rights, and

I'm glad England wasn't full of people with your attitude around 1620.

>
> Now, please note I'm not talking about minor crap like spitting on the
> sidewalk or speeding.

Woah now, those are serious crimes in my book. As a matter of fact, go gather 500 people from the local mall - ask them, which is a worse crime, "speeding, spitting on the sidewalk or freebanding." How many of them know what freebanding even is? Probably not even one...if it was such a serious problem to the public, the problem would have been fixed. It was hams who urged their senators to push for local enforcement of the CB laws...not the non-ham public.

I see you say you don't support a position, then go on to do just that. In anycase this will be my last on this one......you can not reward outlaw behavior by giving them more frequencies.

Based on the obvious dis-regard and dis-respect for regulations, already in effect, I see no possibility that the rag tag bunch you refere to would obey any new ones.

End of discussion.

I'm glad the colonies had some people who disagreed with Dwight's
views in 1776.

Well it certainly is hard to find people with the courage of their own convictions today. The way I figure it, those laws are there for a reason. Who am I to contest them or break them. The way I look at it is a criminal is a criminal regardless of his crime. I can't stand criminals of any sort, so, why would I lump myself in the same group as them? As for speeding is concerned, I don't see a point to it. The farthest I go on a daily basis is 110kms. Speed limit's 80kmh ... if I tossed on say 15kmh to that (2 points off my licence if I get caught too) it will take me 1hr 9mins, if I do the speed limit it will take 1hr 23mins. 14 extra minutes is no big deal with me. And is certainly not worth the trouble if I get caught.

As for the signals and such, using them is very important, kind of a good idea to keep the other drivers on the road informed of my intentions.

There were no "question pools" in 1953, all we had was the ARRL
license study guide and w1aw. The FCC test authors seemed to take
delight in putting questions in the tests which were not in the ARRL
book. Us 13-14 year-olds had precious little help from anybody or
anything except the neighborhood Elmers and/or each other.
>
> not counting the 120
>pages of additional support material in study guides like Now You're Talking.

First I'm not the least bit convinced that the old Novice writtens
were easier than the nocode test. When was the last time a nocode had
to pull a schematic for a particular type of oscillator out of his
head and actually sketch the circuit??
>
Second, there is also a *lot* more to it than just the relative
difficulties of the technical questions. That one is almost irrelvant.
It involves a much broader set of circumstances and realities which
have changed dramatically over the years. These range from simply
having access to an examiner to drop-dead mandatory upgrading to
educational practices to econmics and lifstyles to the differences in
the available technologies, long list.
>
Getting a ham license always been a packaged process under the
specific conditions of the timeframe, not just a written exam plus
today, an optional code test.
>
Wander on down to the local ham club meeting, check a bunch of boxes
on a multiple choice exam and pop out an instant ham radio operator.
If you screw up an element you just hang around a few minutes and take
it again. Yeah, whatever, giggle.
>
No wonder there's more of a "blase factor" amongst entry-level types
today than there was back when. Along with a healthy dose of disgust
amongst us crumudgeons.

I have my 1954 ARRL License Manual here. The Novice section has not a SINGLE schematic, nor a SINGLE "calculation" question. There are exactly 4 pages, and 33 sample questions like "what is a frequency multiplier", "what is the relationship between a cycle, a kilocycle, and a megacycle", and "what is the purpose of a radio-frequency choke".

>alchohol.

All true, but there's even more:

- Corruption of law enforcement officials
- Redistribution of wealth to suppliers of the illegal substances
- Diversion of resources from other needed government functions to enforcement of unpopular laws
- Creation and growth of criminal organizations

> I emphatically agree that " Drugs, even if legalized,
>(would) present the same problems ..." as alchohol does but we
>wouldn't have people being robbed and murdered so addicts could
>afford drugs because drugs would be as cheap as wine.

Drug abusers would probably have shorter lifespans because they could afford a much higher level of abuse. For a short time, anyway. Many abused drugs are not as self-limiting as alcohol.

> We
>wouldn't have little kids and their grandmothers being killed by

>warring dealers because the dealers would be settling their
>disputes in courts just like liqueur store owners. We wouldn't
>have police and innocent bystanders being, not to mention
>addicts and dealers being killed in drug raids. All that'd go

>the last time you read of a kid being shot in a fight over
>illegal alchohol distribution, or of a wino killing anyone for
>the price of a bottle of Ripple.

Bingo! The illegal alcohol supply network had to be price- and
quality-competitive with the legal one to survive. Here in EPA, virtually no
illegal alcohol suppliers exist. The main focus of enforcement is stopping
underage drinking, issuing liquor licenses in accordance with community
standards, and being sure the liquor taxes are paid.
>>
>>   So, in the end, the premise that drug legalization will reduce the
>> problems associated with the drug trade, or the problems associated

>will not reduce the # of addicts or help their families but it
>will eliminate the need for addicts to rob and kill to support
>their habits and it will minimize the assault on our rights, and
>....

Exactly.

But the most important issue isn't being addressed. The "WOD" (why must the
language of force and violence be used?) focuses on reducing/eliminating the
supply. The theory is that the prohibited substances can somehow be made
unavailable, but this approach rarely works. Instead, it raises the prices
(Econ 101) and so makes distribution profitable for those willing to violate
the law.

The question that is avoided by the "WOD" is: Why do so many people WANT to
abuse substances that are clearly harmful and addictive? That's where the real
problem is. Did prohibition, of itself, "cure" anyone of alcohol abuse? I don't
think so.

Compared to the other BS on this rec.radio.amateur.policy
NG, this one is minor.

You are simply too good to be true, Rob. Not many people consider murder
and spitting on the sidewalk to be equal crimes.

I don't know about that. I have been driving on the Los Angeles area
freeways and city streets for 32 years and I have never received a traffic
ticket either. I don't think this is as rare as you think - I know of
```

several other people who have also never been cited for a moving violation.

I have, however, received a parking ticket from a city that did not allow overnight street parking in residential neighborhoods, and "forgot" to post any warning signs. A new twist on the old "speed traps" ? :>)

Anyway, I challenged the citation on the basis of 1) the violation was not done intentionally, and 2) the violation was a direct result of the city's failure to post adequate signage informing the public of the ordinance. The judge concurred and dismissed the citation.

"Bob" <bob@bob.com> wrote in message news:3AF2C971.55CA754E@bob.com...

> <<SNIP>>
> It was hams who urged their senators to push for local enforcement of the
> CBlaws...not the non-ham public.
> << SNIP >>

Wrong. The legislation was initiated as a direct result of the voters pressuring their representatives to do something to stop the interference being generated in their homes by high powered CB operators. And it only became a matter for the Congress when the homeowners and local police became frustrated with their inability to address the issue locally.

FYI, a quick search if the web found this news blurb:

"The bill was introduced bt Rep. Russell Feingold (D-Wisconsin). The text of his bill would allow states, cities and other municipal regulatory agencies the to prohibit the use of any equipment on the 11 meter band that is not specifically authorized by the FCC. This would mean that they could take a CB operator off the air (and presumably confiscate their station) for using things such as transceivers modified for out of band use and illegal high-power amplifiers. It also prohibits CBers from causing interference -- even if they are using legal equipment.

Feingold says that his bill is in answer to a myriad of consumer complaints about CB operators he has received. He points to all the interference coming from CBers and his bill specifically excludes all other radio services -- including GMRS, ham radio, cellular, broadcast, PLMRS, etc. from state/local oversight.

It appears now as if the Feingold bill has reasonable expectation of passage this congressional session. He calls it "a common sense solution to a problem that cannot be addressed under existing communications law."

I just hope these drug warriors show the same aggressive concern for my well-being when I need those hugely expensive anti-cancer drugs that they have shown in keeping me from ingesting the smoke of the

Cannabis Sativa plant.

Spitting used to be illegal here too ... not anymore since hte amalgamation.
But, cursing in public still is so I curb my toungue. See the biggest thing
ya have to understand about why people detest murders so much is not because
someone is dead but because they have tossed off what we believe to be right
for their purposes. So in that case what difference does it make if how ya
did it was by killing someone or spitting on the sidewalk ?

Plus on a rather hedonistic point of view ... it annoys the hell out of
those drivers who are in such a hurry to get nowhere as to risk their and
others lives.  I have to bring the camera one of these days to catch their
expressions =)

Rob, that attitude should be a crime. It's a lot worse than
freebanding.

>purpose of a radio-frequency choke".
>

Later revisions added things like simple Ohm's Law questions and the like. But the Novice test was always the simplest written test given.

However, remember these fun facts:

1) The exact Q&A were secret
2) Retesting was a long drawn out process. In 1967, when I took the Novice, the drill was that after you passed the code test the volunteer examiner sent the papers to the FCC and you waited 6 to 8 weeks for the written exam to show up. After you took it, the volunteer examiner sent it off to the FCC, and you waited another 6 to 8 weeks for the FCC to respond. If you made it, you got a license, if not, you did the whole drill all over again. The cycle time was 12 to 16 weeks - that's about 3 to 4 MONTHS. End result was that most Novices with any sense went into the tests way overprepared.
3) The Novice license so earned gave very minimal privileges.
4) The Novice license so earned was only good for a year (later, two years). Before 1975 or so, the Novice was a one-shot deal, too.
5) The oft-quoted number of pages was not the entire study guide, particularly for the higher classes. The LMs also included the radio regs for the ARS, and questions on any of the regs could be asked.

Of course the old tests aren't available for comparison (they were secret, remember?). So it's all impressions and opinions.

Murder is wrong depending on its context in our society ... self defence is not wrong ... in many countries execution isn't wrong ... only reason walking up to someone on the street and killing them is illegal is because we say so .. .because we put a law to it ... same goes for the spitting on the sidewalk analogy.

The vast majority of speeders don't purchase and install special equipment (linear amps) and modify their rigs (frequency mods) with the sole intention of breaking the law.

OK, but where did I say that the government employee's SOLE responsibility was
to adminster/oversee its RACES organization?  This person could be someone who
has responsibility to the local police and fire departments as well....

...And the CD radio came from the WWII wartime service.  You make it sound as if
"born out of" isn't equivalent to "derrivative from" (whether directly or
indirectly)....

Actually, he's serving his FOURTH sentence now, of 3 months. I think that they reduced (as compared to his last conviction) the sentence to 3 months only because of health reasons and the cost to the taxpayer.

My point exactly. 'Freebanding' is a deliberate act, carefully planned and executed. But just for the sake of argument, suppose you live on a street where the speed limit is posted at 4mph. How long until you get fed up with people cruising past your house at 1000mph? More realistically, your street is probably 25mph, and that would clock those speeders at 6250MPH!!!! Not just that, but these speeders hold drag races, don't use any mufflers, and drive off-road right through private property. When these speeders are caught, the fines are typically more than ten times that of speeders on the highway. So how do you compare radio pirates to speeding?

>Rob St.Denis

BTW, any relation to Bill St.Denis in Spokane?

Whether or not KY exempts them, federal law does - a corrolary of ruling 93-17.

In CA, it was not statewide, but each city was free to enact their own
ordinance. However, federal law overrides when a licensed amateur is involved.

True. What it comes down to is: Are you likely to be the next person such a major problem will happen to? My position is that due to a lack of proper training, the answer is more likely YES than NO.

I've seen examples of how well or poorly some local cops are trained with regard to my state's penal code by their departments, and in some cases, if they were to be tested, they would all receive failing grades. If they can't even properly enforce the criminal statutes, how can we expect them to understand any HR-2346 derrivative law?

I felt that the omitted portions of the quote were unnecessary.

Granted, there will always be some extreme case. However, what I see here is a
likelyhood of many more problems (i.e. the average moves toward the extreme) for

those properly operating as compared to those the law intended to target.

> thread.

Yeah, I know what you mean there.

> That's a bit reactionary, Leland. I don't think legalizing drugs is an
> option. I don't see the connection between the two.

To a point true, but I think you get my drift however. Until somebody makes a stand and says "NO MORE" they will just keep taking what is not theirs to take.

> I'm proposing additional bandwidth for a particular mode of operation in
> order to help alleviate some of the congestion on an already overtaxed
> and overused band, which may just help to reduce the encroachment by
> unlicensed radio operators on HAM bands.

You have to stop and think about the mechanics a little bit. If a new band was created, as you suggest, then there will appear commercial rigs to operate on the new band. Once that happens then hordes of other CBers, looking for a clear channel to talk on, will show up over running the operators there now. Now we have the same situation all over again. SSB operators looking for the open band. They have to learn to be happy with what they already "legally" have.

Ham Radio is not going to be any different either once you get your ticket. Sometimes the bands get crowed so you either put up with it, move, or turn the rig off. We don't just spin the VFO knob looking for an open frequency outside of our legal bands like the freebanders currently do on 11m. Hams seem to have much more respect for their privileges than freeband CBers do. I think Hams have more sense of respect for others rights to radio spectrum than the freebanders do. If there is any spectrum use disagreement it is taken up with the FCC, and let them decide. Hams don't just "occupy" spectrum outside of our bands because we feel we have a "right" to it.

They both willfully break the law. They both know that they did it (although ignorance is no excuse), heck "freebanders" have a term for their crime, "freebanding". They use a portion of the spectra reserved for other services, which in turn can lead to prolonging those services and in the case of millitary and SAR that could mean someones life the same as doing +20% on the high way makes you more of a danger to other drivers.

> BTW, any relation to Bill St.Denis in Spokane?

Nope ... I'm a canuck.

The difference is that when you run a kilowatt amp, you do it with the sole intent of breaking the law -- you purchased the amp in order to break the law and nothing else. Not true with a car, unless your car can only operate above the speed limit.

I agree with you there, as it is yet another reason against pirate
radio.

>> BTW, any relation to Bill St.Denis in Spokane?

A 2 watt carrier? do you just sit there and throw dead keys or do you talk.
If you do talk I am sure it is more than 2 watts so your deadkey figure is
irrelavent.

UPS...??? FedEX...??? Scotty beam's it up?

If I remember correctly, KY was the state where a young Ham/ARRL appointee had his HT confiscated by some bumpkin deputies. Seems' they didn't know anything about radio regulations or even thier own state code.

Perhaps someone with some knowledge of such things could have approached the Sheriff's Office at some time prior to the incident and discussed Amatuer Radio and it's capabilities....

But then, maybe not...don't want a bunch of radio kop's running around pretending to know something when they are ONLY "amateurs".

Huh, Hansel...?!?!

Not looking for a medal. VEs are required to make reasonable accomodation
to disabilities and medical conditions. Besides, we are generally pretty
good people with a streak of insanity for volunteering.

****
Might I suggest Morse Academy from http://ah0a.org. If you have a problem
recognizing sounds the freq can be adjusted as well as the spacing. If you
type decently, learn the code typing. Seven lessons, tried and true
software, read the instructions before installing. Buy a cheap set of cans
from Walmart before those near and dear berate you strongly about the head
and shoulders with large cudgels to stop the incessant beeping.

****
FM has the advantage of being receiver-dependent. Pump 15 kHz deviation
into a receiver expecting five and all you get is 'What did you say?'

Considering that 28-29.7 is a treaty ham band as is the 24.89-24.99 band,
the Commission could not give you them if they wanted to.

The 25-30 range are garbage frequencies to begin with so even the allocated
ones are probably never used. If they are used, it is with hardware that

probably takes three minutes for the tubes to lite and the dynamotor to come up to speed. It is damned hard to tell just how vital these were and at one time the FCC was going to a 99-channel CB and clearing everything up toe 27.99. There is no great way to tell. Below CB is also a land mobile allocation. Hard to tell just what is there. The 11 meter broadcast band has some STLs in it, one of which plays reggae to keep the freebanders away. You should remember, however, that while the treaty definition of land mobile is pretty broad, it really does not include hobbyists.

This thread has identified problems broader than the one you proposed originally:

Equipment: So long as equipment that is within a pair of dykes of out-of-band operation is allowed to come thru the ports we are dead in the water. These things can be made more bullet-proof than they are and whether intended for CB or 2 meter amateur or marine VHF they need to be. Time to get Customs involved. Engineering firms can be hired to do the grunt work just as they are for everything else; the FCC (properly) does no grunt work.

Enforcement: Phil Kane, as usual, makes a good point with respect to separating the enforcement and technical from the political. The priorities and funding are just too different.

History: It is not 1958 but some of the uses of the garbage band predate CB. There is a lot of history to wade thru. I agree fully that Ancient Modulation needs to be kept in the 40 until it dies. While it is an interesting nostagia trip, there is no good reason for ham gear to be AM-capable; another equipment problem.

Attitude: This is a tough one. While I tend to like to legalize facts on the ground to try to get people in the tent pissing out rather than outside the tent pissing in (TNX LBJ) the two good objections are the rewarding of outlawry and the lack of a guarantee that this will stop the problem. In this case, justice lies on the side of the truckers who are for the most part the English speakers on 28.085. There is a real use for a trucking service, it does meet the treaty requirements, and it could be designed to use the present antennas etc on an increasingly electronically-cluttered cab. As they are pretty much the 'opinion leaders' in CB circles giving them ownership interest in a band that was hard to bootleg (13.2 channel spacing for example and PL required) might ultimately help cool things down.

There is less justification for opening a new SSB-only hobbyist service on say 5kHz USB channels simply because you don't fit any reasonable definition of Land Mobile. This is the reason for the skip limits in the regs to begin with and the requirement in a number of countries that at least one party to a conversation be literally mobile. I tend to favor it only because it would accelerate the scrapping of Antique Modulation and the TVI, non-Linears, etc that go with it.

Download the CW software, use my e-mail (God, I love ATT) if need be, and let's get you on the ham bands before the spots go down

No. They purchase speed radar detectors so they can slow down when they approach a cop out trying to bust them....

Scan 10 Meters, using 10 KHz steps ending in "5". The CB operaters have
"channels" into 10 meters beginning at 28.005, 28.015, 28.025, 28.035, etc.

Log what you hear.

If mobile, you especially will be valuable if you monitor 28,085 for truckers.
If they are strong, be alert. If they pass you, try to identify the trucking
company. We've having excellent luck writing to company presidents with
suggestions that they speak to their legal departments about their drivers who
refer to 28.085 as a "company channel".

Hmmm..."us crumudgeons?!?"   :-)

All the caterwailing, sniveling, and snorting from curmudgeons, tsk, tsk, tsk. Oh, my, the world is going to hell because some curmudgeons (or crumudgeons as the case may be) don't like the modern-day ethos. They ply the pathos via instant finger-tripping on the Internet to demand, nay command, the "necessity" to do as they (the morsemudgeons) did.

Among the pros who were into already into radio before certain morsemudgeons discovered sex, there is still a very healthy disgust (over the counter, not prescription) of those who demand a return to yesteryear and all the silver bullets of standards and practices of long ago. Hiyo sliver...

Well, since you've addressed me as "Dwight" on several occasions, and it is rather commonplace to use first names in these informal discussions, I never expected you to demand such formality. My apologies again, Mr. Stussy.

Well, since I'm certainly no fan of the FCC's record when it comes to enforcement of CB, I'm not going to dispute that for one moment. However, we can at least hope that Riley's claims of increased enforcement of all radio services will also include the Citizen's Band. However, I'm no more convinced of that then you seem to be.

Richard:

Thanks for the kind words... You've brought up a few points that I hadn't thought of, and that I need to give some thought to before responding..

I take my written Tech and General tests on the 8th. I'm going to work on my code with KC8HEZ and others here in Livingston county on 2M when I get my set up. Once I get the code down, I'll take the code test, find an HF set, and hopefully be talking on HF by the end of the year.

The next problem is going to be an antenna here in the apt. I've thought of throwing out a longwire and using a tuner, trying to use the gutters on the building as a large loop antenna with a tuner, and a few other options. The 2M setup shouldn't be too difficult. I do have a rail outside my window I can mount an antenna to... I just hope it's high enough to get to the repeater.

Hopefully, by the 10th, I'll have a callsign to send you guys... and by the 15th I should have the domain name corresponding to that callsign.. I'm going to put a site up here at the house for those who are curious.

73's and Hopefully I'll be chatting with you all on the air soon.

-SSB

I'm starting out taking the Tech and General written tests. Code will
come later this year, hopefully. I'm going to need a 2M set to start,
and an HF set later, once I've passed the code requirement.

I did get that, Leland.. But honestly, the problem with CB'ers venturing
out where they don't belong is twofold: (1) There just isn't enough
bandwidth for CB. and (2) Export Radios that do too much. I think we can
both agree on these two, so I won't go into it too deeply here.

No, but you can look for an open frequency within the bands HAMs are
allowed to transmit on. That's my point... HAMs have the bandwidth.
CB'ers don't. So when a CB'er goes off to find an empty frequency to
talk on, they're in violation of FCC rules when they go outside of the
standard-40. HAMs have MUCH more bandwidth with which to search for an
"open channel"...

I've turned down the carrier on my Grant XL to 2 watts. The radio swings
to 5 on AM, and does 0-12 on SSB. the AM measurements are RMS, the SSB
measurements are PEP.

I don't agree with your basic premise, Kim. We are not professionals, and this is not a professional discussion. In most cases, the things written here are pure opinion, not absolute fact (and few claim more than that when posting).

A requirement to substantiate (through statistical reference or some other method) each message prior to posting would totally stifle free and open expression by the members of these newsgroups. In addition to the elimination of opinion, such a demand would require hours of research before any message could be posted. Few, if any, would be willing to put such an effort into a simple newsgroup discussion.

Furthermore, while reference and verification are important in professional discussions, so are the unsubstantiated opinions of those professionals, and the unsubstantiated opinions of those who view the results of those professionals. Should it be any less for those involved in these newsgroup discussions?

As for your determination not to allow the unsubstantiated opinions posted in newsgroups to affect your own opinion, perhaps I should remind you that this is not that different then the way opinions are often formed outside of newsgroups - through discussions with friends, co-workers, associates, and neighbors. And I would find it very hard to believe that you have never changed your own opinion based on something said by others in your life. Now that is not saying that you should suspend common sense and believe everything you read here (no more than you would believe everything a neighbor or friend says), but a totally closed mind to everything you read here would be just as unwise (if nothing else, it offers a window to how others are thinking about various issues).

By the way, as for the message you asked me to cite, you caught me at a good moment. I often post opinion, without ability to substantiate, in these newsgroups. This time, however, my wife just finished a report on drug abuse for a college class and one part of that report addressed drugs and alcohol. I've been using several books she obtained from the college for some of the material I've posted to this discussion.

I clearly addressed that in my previous message - if we use alcohol prohibition as a guide, there is no evidence that the "evils" of the drug trade will be reduced if the now illegal drugs are legalized. In fact, if we do use prohibition as a guide, the opposite is more likely true - the illegal drug trade will continue to grow. As long as money is involved, drug dealers would simply switch emphasis to more dangerous drugs.

In other words, the only way your argument (the reduction of crime relating to the war on drugs) can hold true is if we completely legalize all drugs - heroin, crack, and so forth. Therefore, you cannot use that argument to advocate just the legalization of marijuana - the effects of the war on drugs will not decrease if marijuana alone is legalized.

However, if you are going to advocate the legalization of all drugs, you cannot continue to downplay their effects by comparing them to alcohol - the effects of heroin, crack, and so on, are not at all comparable to the effects associated with alcohol (on the individual, on society, etc.). Likewise, your attempt to use prohibition as an argument also goes right out the door - the growing use of hard drugs following legalization would be catastrophic on this society, far beyond anything ever experienced following the end of prohibition.

So, I guess we better clearly define the discussion before we go any further. Up to this point, I have been addressing alcohol and prohibition as they relate to Cecil's argument about the legalization of marijuana. However, if we're going to change the discussion to include the legalization of all drugs, then we really need to get off this alcohol nonsense (alcohol does not relate to the harder drugs). In addition, if we're talking about the legalization of all drugs, the emphasis of my argument would change. Instead of talking about the drug trade, I would instead center on the harmful effects of these drugs as the core reason why they should not be legalized.

In fact, to be perfectly honest, if we're talking about the legalization of all drugs, this conversation is effectively over. No country in the world today has legalized all drugs, and no country in it's right mind would ever think of doing so. The possible effects would be so horrible, no country would even imagine doing such a thing. Therefore, to even discuss such a notion is a utter waste of time.

What anti-cancer drugs? Are you talking about the drugs used to help reduce the nausea associated with certain cancer treatments? If so, they are no more expensive than marijuana.

I must have missed that part - I don't remember any mention of bicyclists. All I remember is a mention about driving on the side of the road, which is indeed minor (unless you hit a bicyclist).

> On a scale of crimes, is freebanding a

Well, that is certainly stating the obvious.

This isn't the 1620's, Bob. It is the year 2001 and this nonsense has been repeated over and over for decades. Republicans say it whenever Democrats do something. Democrats say it whenever Republicans do something. Political groups say it and those opposed to those political groups say it. Every person who has a gripe about some law says it. In fact, it has been repeated so much, the whole premise is getting a little tedious.

> > Now, please note I'm not talking about minor crap like spitting on the sidewalk or speeding.
>
> Woah now, those are serious crimes in my book. As a matter of fact, go gather 500 people from the local mall - ask them, which is a worse crime, "speeding, spitting on the sidewalk or freebanding." How many of them know what freebanding even is? Probably not even one... if it was such a serious problem to the public, the problem would have been fixed. It was hams who urged their senators to push for local enforcement of the CB laws...not the non-ham public.

They may not recognize the word "freebanding," Bob. However, ask those very same people about CB'ers bleeding over onto televisions, and telephones, and I'm sure you'll get a very strong response. And that (heavily modified radios and big linears screwing up the neighbor's electronics) is just as much a part of "freebanding" as the use of frequencies outside the CB band. And notice I didn't exclude those "freebanders" who use modified ham radios - many of those radios are so heavily modified (modulation, power output, etc) they are not much better then the cheap CB radios others have modified to use outside the citizens band (and that does not even include the dirty linears often used with those ham radios).

And I'm sure those forefathers (the men who wrote a constitution of laws and the first laws of this land) would think it a little silly to compare my views about illegal "freebanding" with their views about this country's creation. But this is exactly what I was talking about when I said the entire premise behind this "evil government forcing it's will on the people" nonsense is a little tedious. It is absurd to paint the laws against "freebanding" as some kind of oppression worthy of association with the struggles our forefathers faced while creating this country, and equally absurd to paint anyone opposed to "freebanding" as someone with views out of tune with those of our forefathers. Such hyperbole over a minor issue like this is neither accurate or effective. Hence it becomes very tedious to see it attempted over and over again with one minor issue after another.

"Not related?" Hard to say - the basics are all there. But the details of what
they did are quite far beyond the tests taken.

Point is, in their case, the code test was not a "barrier" that kept out
"technically knowledgeable individuals" who would "advance the state of the
art".

Good luck with your tests, and welcome to ham radio! As far as antennas go, they are always a challenge in an apartment setting, but you can get creative and will learn much in the process!

Don't forget about going mobile if you are not able to get satisfactory performance with your base antennas or have RF interference problems with your neighbors. I have lots of fun with a Yaesu FT-100D and Hamsticks.

73,

Are you now speaking for everyone with professional involvement in
communications, Len or is this particular quixotic rant the product of
your mind only? You don't need to return to yesteryear. How about if
you just pass one of today's exams?

Yes but what you are saying is you are heard with a 2 watt carrier. It is
irrelavent what your carrier power is when you are talking. If you had a 10
watt carrier and when you talk it went back to 5 watts then all you are
doing is 5 watts not 10.

well, if a 2 watt carrier is full quieting 20 miles away, then the
antenna must be doing its job, wouldn't you think?

-SSB

Full quieting is normally associated with FM use.  Who cares and what does
it really mean you have a 2 watt carrier, unless you go around deadkeying
and never say anything . your carrier power is a useless figure. What is
your carrier power on ssb?

"Sideband" <sideband@spam.me.not> wrote in message

Not really. How about 4 million + miles per watt ?

(Full quieting? Then you must have been using FM emissions, an illegal mode
on 11 meters. :>)

What I was asking for was a bit of consistency. If the WoD is so hugely concerned with the health and well-being of U.S. society, it shouldn't be so adamantly opposed to a comprehensive national health insurance program paid for from the General Fund. That way, everyone in society could be protected from disease and injury as they are now from the evils of illegal drugs. And, since it would be picking up the health care tab, I think it would then be appropriate to dictate what we could and could not put into our bodies for whatever reason.

The ailment I mostly had in mind as us being in need of protection against was cancer. 20 billion dollars a year, about what is spent now on the WoD, could fund a hell of a lot of cancer research.

It really is just a matter of correctly setting our national priorities, Dwight.

In article <3AF3F3C5.A85BEE76@ovis.net>, Dave Heil <k8mn@ovis.net> writes:

>Are you now speaking for everyone with professional involvement in
>communications, Len or is this particular quixotic rant the product of
>your mind only?

An off-the-cuff poll can be taken by anyone who is IN the radio-
electronics industry as to the "pioneering" of radio by amateurs,
or of any of the recent or post-1920s "advancement of the state
of the radio art" by amateurs. Heil will not like the results.

Heil doesn't realize his own attitude towards anyone not
"credentialled" as a "qualified" amateur is at the heart of such
antagonism.

>You don't need to return to yesteryear.

Thank the Lord for that! There's far more interest among the professionals for the existing state of the art of radio and progressing further. There's no need to regress and remain at the standards and practices of the 1930s.

>How about if you just pass one of today's exams?

Heil has no valid rejoinder on the subject so he falls back on the one-note mantra of insisting that all should do as he did: Pass an exam to be "qualified" as an amateur so that he can attempt being "superior" in front of lesser (in his eyes) mortals.

BTW, is there any truth to Heil writing a reveiw of Black's Law Dictionary for the Federal Communications Law Journal?

Project Diana achieved the first moonbounce on 10 January 1946
from Camp Evans (later to become Evans Signal Laboratory), NJ,
outside of Fort Monmouth, NJ. On 111.5 MHz. For a technical
explanation, block diagrams, photos, go to:

http://www.campevans.com/diarnof.html

Project Diana was done 55 years ago. By technically knowledgeable
individuals who actually advanced the state of the radio art. No CW
or code skills involved. The US Army Signal Corps personnel,
including civilians of Evans Signal Labs, didn't need amateur radio
licenses or passing code tests to make them "qualified."

Have NCTAs claimed that the code test was a "barrier" for the
"technically knowledgeable?" Maybe one or two, but the overwhelming use of that phrase in here has been a mantra of the
PCTAs' dissing of NCTAs...as if the PCTAs accomplished so
much in the way of "advancing the state of the amateur radio
art." As a claimant to "amateur radio historian," N2EY should
look up the first amateur moonbounce to see when it was done
and by whom (amateurs who were also working in the
radio-electronics industry) and with what (see a number of
mentions of equipment "loans" done by industry).

I don't advocate breaking them, Dwight, I just ignore them

as if they didn't exist because they are evil and irrational.
I've never been arrested or convicted for a misdemeanor or
a felony so it has worked for me for 63 years.

Ed:

Funny you should mention that. In almost 20 years as a ham, I've never seen a Lissajous pattern on an oscilloscope. However, I have never complained even once about having to learn about it and be tested on knowledge I'd never use. The difference is -- I know *something" about it, what it means, and I know basically how to find out more information about it should I need it in the future. And even though I've never worked RTTY with anything less modern than a Kantronics terminal unit, I consider knowledge about Lissajous patterns to be quite practical and applicable in the ARS. Too bad the no-coders can't say the same thing about the Morse code. But then, they can memorize the correct answer to a question on Lissajous patterns, but being tested on Morse code at a practical speed would actually require more effort than committing some obscure facts to short-term memory for the purpose of passing a test.

>years off of the fun you could have in ham radio.

Leo/Ed:

I'll take it one step further and give you an absolutely airtight, lobster-dinner backed GUARANTEE that full access to the amateur HF bands, with ZERO code testing, will occurr within the first decade of the 21st Century. My non-guaranteed guess is that the S25.5 treaty requirement will go away at the next WRC, thus causing the U.S. FCC 5 WPM requirement to do the same.

>Most folks can learn the code to 5 wpm in a few weeks at about a half-hour a
>day,

Change that from "5 wpm" (sic) to 13 WPM and I'll say you've covered at least 99-percent of all who give it that much effort.

>and once you do, with your qualifications, you will probably be an Extra
>pretty quickly. It really is worth not waiting, especially with the sunspots
>expected to be so good over the coming few years.

I became a ham, learned the code, and upgraded to Extra at 20 WPM just to take advantage of a quickly waning sunspot cycle in the early '80's. I remember working Australia on 15-meter SSB from my car while parked in front of the White House...then being called by a guy in Hawaii immediately thereafter! I used to work stations in California on 10-meter AM from my car just as easily as I worked locals on the 2-meter repeaters. I'd work Germany on a daily basis from a 10-meter FM repeater in the Caribbean. Then I went to Germany and reversed the process. When the bands were hot, all that yakking was a lot of fun, I must admit. But when the bands slammed shut, I was amazed by my ability to continue to work far and wide with comparatively low power on CW -- which really hooked me on that mode. The thing that got me hooked on CW was the fact that I had attained useful proficiency -- not a constantly struggling bare recognition level at 5 WPM but the ability to operate comfortabley at 15 - 18 WPM because I had to take a 20 WPM test to get full HF privileges. It was the testing REQUIREMENT that made me a CW operator, more than anything else.

At a recent meeting of the radio club I belong to, a colleague on the Executive Committee made the comment that people are now "trying" to learn the Morse code now that it isn't being "shoved down their throat." You know, I used to say the same thing myself. However, one fine day I woke up and decided that I've had a lot of things "shoved down my throat" that ended up being just what I needed at the time. Things like education, financial responsibility, hard work, and the Morse code. The truth is, when things I didn't want to have anything to do with were "shoved down my throat," I found out that if I gave it a try, instead of endlessly avoiding it and whining about it, they actually did me a lot of good! This has led me to being a person who has no problem with "shoving" the Morse code "down the throats" of prospective amateur radio operators. As for my friend in the radio club, I hope he goes beyond 5 WPM now that his throat is clear. He is now my local example and guide as to whether I've been right or wrong all of these years.

> Once you pass the test, if you wish, you can have a code-key-burying cermony
>in your back yard, surrounded by all of your friends, but I would encourage
>you to try the mode from time to time. I did, and found that I absolutely
enjoy
>it.

The above reads 50 over S9 on my PoliticKal CorrecKtness meter. You followed ARRL Morse Code policy guidelines to the letter; your Kommissars at 225 Main St. must be proud of you, Ed!

>I also encourage you to become licensed as a Tech right now. There really is
>more to that class of license than FM on a local repeater. You have access
>to lots

99.7 percent of the entire Amateur spectrum allocation is merely "lots?" Never let it be said that you aren't a master of understatement! The 20-meter band alone is "lots" of spectrum when viewed with respect to the global communications potential it gives the average ham...and that's just one of nine bands in a region of the spectrum that occupies just .3 percent of the entire amateur spectrum allocations!

>of spectrum and can do some interesting things with satellite,
>earth-moon-earth communication, meteor scatter, SSB and CW over hundreds of
>miles, various digital modes, etc. A couple of hams recently did a 2-way
>5-watt moonbounce QSO using 12-foot home satellite dishes, using a multitone
>digital mode and long-term integration techniques. Cool. From there, if the
>allure of HF is what attracts you to radio, the code test will not seem like
>such a large jump. Even if I had not found myself really enjoying CW
>operation after a while, I think the prize would have been worth not waiting.

Ed, you're absolutely right. The only thing is -- ALL of the people I've known who've ever come close to doing any of this stuff have, to the man, been code-proficient, CW-loving, pre-restructuring Amateur Extra class licensees, usually with non-Vanity 1x2 and 2x1 callsigns. I don't personally know a single "no-code" Technican who has done ANY of this cutting-edge V/UHF weak signal mode stuff. With them, it's been strictly FM repeaters and the occasional simplex chat -- with a lot of talk about CW - either whining about it or claiming to want to get involved with it "someday."

>Good luck.

Absolutely!

>to do as they (the morsemudgeons) did.

Who said it's necessary? Seems to me the FCC said it was LESS necessary, and will soon be even less necessary.

Only YOU keep insisting that "they" insist it it is.

You have yet to defy "they".

>Among the pros who were into already into radio before certain

>of the radio art" by amateurs.

At Electronic System Products, an ANTEC subsidiary, (of which I have intimate knowledge), 9 of 12 engineers and one of 4 technicians are licensed Amateurs.

Of the engineers, 66% state that they persued a career in professional electrical engineering as a result of thier exposure to same via Amatuer Radio.

The other 33% became Amateurs in engineering school or sometime after, but have used thier license to some degree to facilitate thier careers.

Two of three members of tghe purchasing department hold Amateur Extra licenses, one of which is the trustee for the club callsign.

(The company actually encourages Amateur Radio, sponsors a club station and provides funds and office space for the station.)

>Heil will not like the results.

Was this "off the cuff" enough for you? I dare say Anderson will like THESE results even less.

>Heil doesn't realize his own attitude towards anyone not
>"credentialled" as a "qualified" amateur is at the heart of such
>antagonism.

If that "antagonized" person wasn't in the habit of being himself an antagonist, the situation would not manifest.

>Heil has no valid rejoinder on the subject so he falls back
>on the one-note mantra of insisting that all should do as
>he did: Pass an exam to be "qualified" as an amateur so
>that he can attempt being "superior" in front of lesser (in

>his eyes) mortals.

No "mantra". Just wondering if you are ever going to "put up or shut up".

No matter. WE know you don't have it in you to do. Might make you just a bit too "mortal".

The FCC is not about to take any action on micro-count stats like the
churning of the month-to-month numbers. They look at trends over
significant periods like the 5 & 10 year curves and that's also all I
can be bothered with. Which is why I don't pay any attention to the
Speroni site.
>

>>Band occupancy and spectral efficiency mean everything.

I'm sure previous generations of hams had the same attitude about spark gap
usage before it was banned altogether.

You're going to give yourself an ulser if you keep lamenting about it.

Steve,

The burden of proof in a criminal case is, as you probably know,
"beyond a reasonable doubt." In the civial courts, the
burden is much less... i.e. by a preponderance of the
evidence.

Cheers,
Bill K2UNK

But there was nothing in the R&O that suggested that the FCC was so influenced by Kenwood. Indeed, the vast bulk of referenced comments wer from amateurs, the ARRL, NCI, etc.

Like it or not, CBers out number amateurs easily. You can find more people operating at any one given moment between 26.555 - 28.000 than you'll find on all the HF ham bands put together.

It would take an incredible amount of time and money to clean up that mess.

Additionally, speed limits in many places are arbitrarily set
low.  The USA population routinely exceeds highway speed
limits and the police don't care one bit.

And for most people, they are speeding just staying with
the flow of traffic on American highways.  Interstae 80 in NJ
is 55 for 30 miles before NYC.  The AVERAGE flow of traffic
is usually 65/70 or higher.  Anyone doing 55 is (or should
be) in the extreme right lane.

Cheers,
Bill K2UNK

You can make exactly the same argument concerning guns, Dick. The gun takes the person over and makes him do evil things. Why not punish the criminals for their violent crimes no matter what the cause? Why not hold the individual responsible instead of the object or substance?

You can make exactly the same argument concerning alcohol, Dick. Why
not hold the individual responsible instead of the object or substance?
Punish criminals for actual crimes. Do not punish free citizens because
they *might* commit an actual crime.

> It's part of The Way it IS. Society's way of keeping the druggies off

How do you keep the guns off the road and eliminate the road rage shootings?
Outlaw guns in vehicles? How do you keep drunks off the road? Outlaw alcohol
again?

Hmmm--let's see -- that quote was from the episode "Return of the Archons."
I believe that was episode number 22, original airdate Feb. 9, 1967, and
"stardate" 3156.2.

>That probably went right over Larry's head. Anyone unfamiliar with Star Trek
>wouldn't know what you were talking about.

My only response: ROFLMAO!!! I clearly remember sitting at my TV set the
first time I heard the mysterious opening notes of the theme, and then heard
William Shatner utter those marvelous words, "Space...The Final Frontier."
I've been boldly going where no man has gone before ever since. I'm pretty
sure I've seen every episode of Star Trek and all of it's spin-off series many
times, and will see them many more times. If you're looking for something
to trip me up on, you'd better pick something else!

So you ALWAYS drove 55 when the national speedlimit
was 55? That 55 farce was instituted in 1973 to save fuel during
an oil crisis but the lamebrains in DC failed to set an expiration
for it and it took years before the safety nazis lost their
stranglehold on the legislators to finally end the 55 NHSL
only a few years ago.

>It would take an incredible amount of time and money to clean up that mess.

Cecil,

You are applying two principles here that are commonly ignored when dealing with such passionate issues. Real-world data combined with a generous helping of common sense. I too recognize that "freebanding" is illegal and definitely a practice NOT to be encouraged.
Having said that, a question does come to mind...With the declining interest of this country's youth in amateur radio, (starting cold that is) what segment of our society will likely inherit amateur radio? Combined with attrition of the "old guard"...could it be a large group of people interested in making long distance contacts via sky-wave propagation on the hf spectrum? Gee...besides licensed amateur radio operators, who else fits that description?

As far as the enforcement issues re. "freebanders," we have a thirty year (plus) real-life model to study. I'm sure all those fellas (& ladies) on www.sugardelta.com will be more than happy to set down their microphones once we ask 'em. I won't bother trying to recruit them as many are already licensed ARO's. Jeepers, if some are already licensed ARO's, why still remain loyal to the 11 meter crowd? Mysterious, eh? Seems to defy common sense...could it be passion?!

That's why I suggested that the payment of any monies be controlled by an
independent review authority on a case by case basis - the civilian
enforcement fund management.

>   The FCC has always prided itself on being "squeaky clean" and making

I agee. Still, if implemented correctly, the plan could work to everyone's (except the illegal operator's) advantage. I only spent five minutes thinking about it. With some real effort and expertise I'm sure a workable system could be put together.

> >(and once a search warrant was executed I wouldn't be too surprised if

>   sort of search today.
>

Very true. However, in my past law enforcement experiences, it is usually the case that TV's, VCR's, stereo equipment, etc. are displayed in plain sight - stolen and legal stuff is often on the same shelf. And many of the druggies leave their stash and paraphenalia lying right on a coffee table or nightstand. Once one piece of stolen property - or a stash of dope - is found, a quick call to a judge (while still at the suspect's residence) and a telephonic extended search warrant will be issued.

>   Contraband is contraband - it is material that cannot be resold
>   to others. Again, seizing stuff for resale leads to "dirty
>   opportunities" when the enforcement agency gets a slice of the
>   action. That's why the FCC is ordered by the court to destroy all
>   equipment seized on its behalf by the U S Marshal Service.

True, but as I understand it "contraband" is stuff that is illeagal to own by anybody. Things like fake Rolex watches, elephant tusks, tiger skins, etc. However, things which are otherwise lawful to own by the proper persons (like radio equipment) are often auctioned off by various police agencies every few years when they clean out their property rooms. Even firearms once used in a crime are sometimes re-sold to licensed dealers.

And, according to my suggestion, the proceeds of these auctions would go directly to the civilian enforcement fund administrator. Only later, on a case by case review basis, would the fund administrator release any of the funds back to the enforcement agency.

```

Some interesting numbers starting to show from the restructuring.

Using figures from the 12 month period ending April 30, 2001 here are the trends.

The Amateur Service gained a net of 5,413 licensees.

The General thru Extra classes gained 29,419 licensees.

The Tech/+/Novice classes lost 24,006 licensees.

As you'd expect, all the legacy classes (Novice, Tech+, Advanced) lost licensees.

Tech gained 20,354 hams (+9.9%)
General gained 25,177 hams (+22.6%)
Extra gained 18,114 hams (+23.4%)

Expirations last two months (a measure of who is interested enough in the Amateur Service to send in the paperwork to renew their license) show an alarming trend in the lower classes of license, with lapses due expiration exceeding the higher classes by a factor of almost 3.5 to 1. What can be done to turn this trend around?

Extra	198	expired
Advanced	312	expired
General	495	expired
Total	1,005	

Tech +	1,079	expired

Tech	1,050	expired
Novice	1,266	expired
Total	3,395	

73, Hans, K0HB

I would have never pegged you as being a Trekkie. At least you watch one of the only two decent shows that network television ever produced. M*A*S*H being the other one. BTW, that's "decent" in the sense that they actually made people think while entertaining them.

Most of the "Safety Nazis" were/are highway patrol men and women who see the 55 MPH limit as a great way to generate revenue through fines. The evidence that a crash at 65 MPH is less survivable than a crash at 55 MPH is anecdotal at best.

So now the question is...Who determines which laws are good or evil and by this which do I "ignore" and which do I obey.

If I determine that grand theft-auto is an evil law, do I have to right to ignore that law and steal your car?

How do you know I wouldn't like the results? You don't have any data, haven't taken any such poll and speak solely from your own emotion. You are also the first to chastise anyone for presuming to speak for a group. Why not just say, "I think..." instead of leading us down the merry path?

> Heil doesn't realize his own attitude towards anyone not "credentialled" as a "qualified" amateur is at the heart of such antagonism.

Heil realizes that you have a personal problem with any radio amateur who doesn't kow tow to you because of your professional credentials.

Do as I did? Hardly! Just go out and pass any current exam--even the
Technician. If you'd like HF access, go for the WHOLE 5 wpm. You don't
have to return to yesteryear, just come up with a ticket by meeting
today's requirements. It's gotta be a snap for a smooth professional
such as yourself. You did want to join the ranks of radio amateurs did
you not? I say this because you have a long history here of letting
hams know how things should be. You constantly post material in an
amateur radio newsgroup so I would think that many assume that you have
some interest in becoming a radio amateur. Otherwise, why the fixation?

> BTW, is there any truth to Heil writing a reveiw of Black's
> Law Dictionary for the Federal Communications Law
> Journal?

Dunno. You started the rumor. Why not write an outcome for it as well?

>

Remember two things, Hans. Pluses are being renewed as Techs and have been for a while. And there are a fair number of grace period renewals each month so it is not a total loss. In April, 1510 renewals which may also be from May and June expirations were issued against the 2100 expirations among the now-merged Tech classes. Viewed in total, more licenses were renewed in April than expired in April. This will probably happen again in May with a big July coming up -- you almost need a delayed four-month moving series to make any sense of these. I could not save my spreadsheet when I had to blow up my system to get rid of Earthlink.

So while 1266 Novice tickets expired, 284 renewed or 22.5%. The interesting thing here is that it is that high. Just who in hell renews a Novice given the alternative to take the trivial Tech exam or for that matter the General?? And 134 changed their address in the two months so it would appear they will be with us for a while for reasons I find difficult to fathom.

Try this on for size. In a given month, licenses over a four month period are available for renewal so we will compute a Renewal Base composed of half of the current month, the next two months, and half of the month that comes into the 90-day window and divide the whole shooting match by three because each month appears three times. Novices only

Month	Renewed	Expired	Base	Renewal Pct
Jan	140	535	605	23.1
Feb	198	648	627	31.6
Mar	138	535	587	23.5
Apr	146	731	510	28.6
May		583		
June		357		
July		750		
Totals	622		2379	26.1

Your guess is as good as mine.

The calculation of the base is the problem so let us look at the situation at the end of April.

Month	Expiry	Renewed@4/30	PCT	%of Ultimate
Apr	731	223	30.5	100.0
May	583	126	21.6	70.8
June	357	64	17.9	58.6
July	750	72	9.6	31.5

So it appears that July is about a third along even tho it was not available for renewal for the whole month of April, June has been around for half its time but is already 2/3 to ultimate, May has been around for 75 of its 90 days but is only 3/4 complete, and April caught up by doing another third of its renewals in the last 15 days. Glorioski

So my weightings in the base should be near .29, .12, .27, and .32 for the four months based on a totally inadequate sample.

Now you can look at expiration month of 2001 vs 2011 to get a renewal ratio.

Month	expired01	expires11	pct
Jan	535	144	26.9
Feb	648	164	25.3
Mar	535	145	27.1
Apr	731	223	30.5
Total	2449	676	27.6

See the fun you can have with the numbers? Still doesn't explain the renewal of a Novice ticket at all.

This is the kind of thing insurance companies do all the time. But when I did it, it was on a 3090 six pack and I didn't punch the data.

Get yourself a get-up and be a statistician, too.

And no argument whatsoever intended. Your message just provided me an opportunity to rant at those who constantly demand proof for everything said in these newsgroups.

> [snip] I'm glad you are one of few who can

Kim, you're being too kind - the largest part of this newsgroup, and most others, is absolute BS. Occasionally you might see some really interesting stuff (well written and well thought out), but one has to wade through a lot of garbage to find it.

> [snip] Rather than try to collect the data

Good luck. There is a lot of stuff out there about drugs, on all sides of the issue. Digging through all that can be difficult at best. The book I mentioned is actually pretty dull (most college library books seem to be). It had a chapter about drugs - mostly basic discussion with the occasional fact or figure thrown in. In fact, the chart I used to write that earlier message was about the best there was in this book.

> I think I'd love to perview some of them--
> if you'd care to point me in the right
> direction.

Too late. Classes ended last week and my wife has already taken all those books back to the library. Is there a college in your home town? You may want to check if they allow non-students to check out books (some do - this one does). If so, I'm sure you'll find a good selection on the subject.

No, I don't believe that, Cecil. I said exactly what I believe.

> So have all the other socialists and
> fascists down through history.

The fascist is usually the first person to call someone a fascist in an effort to stifle the expression of opposing views. Luckily, most are smart enough today not to fall for such nonsense.

That is absolutely silly, Cecil. Unlike drugs, a gun does not have any chemical effect on the brain or body.

> [snip] Why not hold the individual

> substance?

We already do hold the individual responsible for the illegal use of the substance.

Illegal drug use is an actual crime.

See thats what people don't understand a speed limit is a maximum not a
minimum.

It should go like this

55    <55    <<55

not

>>55    >55    55

People hitting 70+ should be the ones getting off teh road and having their
heads checked.

Its all about kinetic energy.  The fact that people don't leave the correct
spacing etc etc etc ... Most peopl only leave about 25m between cars at
100kmh ... its simply not enough to stop in ... regardless of hos fast you
believe your "reaction time" to be.

If you read back over the previous messages, you will see that I stated a few messages ago that I'm not talking about minor laws like speeding and spitting on the sidewalk.

If ignorance is bliss, you must be one very happy young man. Many US correctional facilities do indeed utilized BOTH paramedics and nurses.

Even if for only one day, I was one. I "worked" for a company called "Correctional Corporation of America" at their Silverdale facility in Chattanooga, TN. UNTIL I had a chance to see just how they "saved" the taxpayers money.

Try again, Rob.

First of all, can you guarantee me 100% that every person in prison is really guilty?

And that ALL of the crimes committed by those incarcerated would be of such a nature that if they were killed, society would be better off without them?

Sure...rapists, child molesters, etc..But some guy who cheated on his taxes or got caught embezzling some money is worthy of the death penalty?

Try again, Rob....

Still does not negate the fact that if ONE court finds you innocent, there should be NO fear of some other court finding you "guilty" and punish you anyway. "Not Guilty" in a CRIMINAL court, of which the stricter rules of evidence weigh, should be sufficient.

That it is NOT that way is evident...just my opinion.

That it is NOT that way is by design. There is nothing
new, unusual or of significance that changes that.

Cheers,
Bill K2UNK

No it's for revenue enhansment. The cities need the money and most
cities use "traffic" for generating money as a lot of it isn't paid
for by residents. GOD help you if you violate in Royal Oak,Mi as they
have a brand new court bldg that is NOT paid for! Royal Oak police
allowed a video to be made once and it was broadcast, the sargent is
giving the beat cops hell so they will PRODUCE more. $$$

WHY? Do you believe for one second that the speed
limits on American highways are realistic? Do they have
any resemblemce to reality. Is 70 mph across Kansas
logical when there is visibility to the horizon, light traffic
and not a bend in the load for miles ahead?

Cheers,
Bill K2UNK

The intrastate highways were engineered for 70 mph even in the city,
and I do miss the days of "no speed limit zone". Problem is with fuel
economy, doing away with frames, lawyers and millions of idiots who
can't control there machine at speed.

I think that laws respecting the life and property of others are pretty much universal, so let's use an example that has a little more common sense.

150 years ago, it was a felony to harbour a runaway slave in the free states. The crime was punishable by imprisonment of up to one year. Would you obey this law, or would you break it, knowing what the penalty would be if caught?

Maybe I've got my definitions confused, but isn't full quieting when a
transmitted carrier is strong enough to cover all background noise at
the receiver?

I don't recall ever hearing/being told/reading that Full Quieting
applied only to FM. I could be wrong.

Yes, my apologies, I thot that's what we were talking about.

> However, if you are going to advocate the legalization of all drugs, you cannot continue to downplay their effects by comparing them to alcohol ...

Agreed

> .....Instead of talking about the drug trade, I would instead center on the harmful effects of these drugs as the core reason why they should not be legalized.

The harmful effects are well know but *largely* affect only the addict and people who love or depend on him/her. Rather or not the WOD has alleviated these problems is questionable. It certainly hasn't eliminated them.

What it has done is extend "drug problems" to those of us who do not use drugs by increasing the price of addiction, and drug profits 1000 fold. As you point out, the gangsters who used to machine gun each other and innocent bystanders over liqueur territory, etc., are now doing the same over drug territory, etc. Perhaps worse, many drugs are even more addictive that booze and by driving the cost of maintaining their addictions thru the roof the WOD causes literally 1000s of crimes every day: robbings, burglaries and muggings that too often become rapes and murders. Call me selfish, but addicts have a choice of whether to use drugs knowing there is a price. The victims of these WOD-driven crimes do not.

>
> In fact, to be perfectly honest, if we're talking about the legalization of all drugs, this conversation is effectively over.

OK

> No country in the world today has legalized all drugs, and no country in it's right mind would ever think of doing so.

But I must disagree on that. The USA had *no* federal drug laws what so ever for the first 100+ years that marked our greatest expansion. Coca Cola was "the real thing". Every major city and town had opium dens. Some were eyesores and addicts wasted away and died just like alcoholics because they their spent every cent on drugs instead of food and other needs. But they weren't killing ordinary citizens like they are now.

Moreover, police were few and couldn't make warrentless (i.e. "unwarranted") arrests. If an officer tried to arrest you without a warrant you had every right to defend yourself as tho it was a kidnapping! We could buy guns thru the mail and dynamite at the hardware store! Yet there was less crime than there is today ... and all to protect drug addicts from themselves. I know people who are or were addicts. I'm sorry for them and sorry there are such a things as addiction or addictive

drugs but there are and I'm not God. Neither is our government.
I fail to see how blowing $billions every year, that should have
been spent on schools, civic projects, or even new radio gear,
has bettered the situation compared to, say, 1890.

Guess we'll just have to agree to disagree.

They guy who killed you is already caught??? I didn't even know you
were dead. The question was: Would *you* rather kill or be killed?

Using tank turrets to poke holes in a building where kerosene lanterns are burning is a perfect way to start a fire. Using incendiary gas bombs is a perfect way to start a fire. Why do you think the authorities lied about them for so long?

Of course it does, Dwight. If you think the mental power rush that a
gun in the hands of a gangbanger provides is not due to brain chemicals
being released, I feel sorry that you are so ignorant. My concealed
carry weapon causes chemicals to be released in my brain that makes
me feel more confident and secure in dangerous situations. All feelings
are due to brain chemistry, Dwight. If you feel good about watching a
sunrise, that sunrise is affecting your brain chemistry. Everything
that causes you to have a feeling is affecting your brain chemistry.

> > [snip] Why not hold the individual

> the substance.

But that is a victimless crime, i.e. no real crime at all. That is an
arbitrary "crime" defined by the state, like being a black free man
was once a crime in some states. Like females trying to vote was once
a crime. Some laws are bad laws and should be abolished. What if they
passed a law that made it illegal for people to be named "Dwight"?
Would you think that was a good law?

> > [snip] Punish criminals for actual

Only by definition, Dwight. It is no *real* crime at all. If it was
a *real* crime like murder, it wouldn't have been legal at the turn
of the last century. One by one, we are losing our freedoms until
sometime in the future, we will have none. Happy fascism, Dwight.

No use to deny it, Dwight, the implications of what you said are perfectly apparent.

> The fascist is usually the first person to call someone a fascist in
> an effort to stifle the expression of opposing views. Luckily, most
> are smart enough today not to fall for such nonsense.

A fascist believes in private ownership of property but 100% governmental control over that property and the lives of individual citizens. Fascism does NOT imply Nazi-ism. WWII Italy was fascist. The USA is on its way to fascism.

From the IEEE Dictionary: "quieting sensitivity (frequency-modulation receivers) The minimum unmodulated signal input for which the output signal-noise ratio does not exceed a specified limit, under specified conditions."

Note the "unmodulated" requirement which would prohibit this term from being used associated with SSB.

>thing here is that it is that high. Just who in hell renews a Novice given
>the alternative to take the trivial Tech exam or for that matter the
>General?? And 134 changed their address in the two months so it would
>appear they will be with us for a while for reasons I find difficult to
>fathom.

Out here in "flyover country" the novice class still has some legs. There's an awful lot of geography in W0 and W7 (and KL7) where a tech licensee would be awful lonesome with the nearest repeater a couple hundred miles away.

73, Hans, K0HB

Don't patronize me, Dick.  I asked a serious question.

In the past couple months almost 3,500 Novices and Techs let their license
expire.  At some time in the past these folks had enough interest in the
hobby to study, find a test site, and get a license.  Seems a shame that
the interest has evaporated -- or maybe it's not a shame (I really don't
claim to know) -- but there's an old saying to the effect that "it's a lot
easier to keep an old customer, than it is to find a new one".

Why are we losing these "old customers"?

So it could apply to an unmodulated AM signal, then? If so, my statement was correct. If not, I stand corrected. I hope someone will let me know which it is.

This problem of non renweal has seemed to accellerated since the
advent of cheap & easy internet access and very high performance home
computer systems...the magic and wonder of radio commucations has
seemed to been lost to the beige box (Home Computer) in the family

livingroom.

For example in my case i was heavily into packet and was living in kansas city...with packet i could keyboard directly with some ham friends 200 miles away though a series of digipeaters....now a days packet (Keyboard to keyboard anyways) seems to be dead in my area yes there is the local bbs and packet cluster but no way to commucate out of my local area ...

this will give you a idea of why i almost did not renew my tech licence.

```
6 Mtr       <- to many Problems with local cableTV to be of much Use
2 Mtr FM    <- Has become the Ham Version of FRS
2 Mtr PKT   <- nothing but aprs/bbs/dx clusters - nobody to hold a qso
               with
2 mtr ssb&cw<- no cw contacts & not any better on ssb
2 Mtr EME   <- After 6 Months of building i think i heard my return
echo once !
220         <- Never did anything else but call CQ into a over priced HT
220 Pkt     <- A wastland absoulty nothing
440         <- Mostly Dead except for repeater control links
440 Pkt     <- a 9600 baud link between 2 local  bbs's nothing else
ATV         <- a little activity but not much
902-928     <- overrun by home electronics ( cordless Phones Etc )
1.2 Gig     <- A wastland nobody there at all
microwave   <- forget it...no point in even trying, no intrest in
               microwave around here at all except for me it seems
```

Now please keep in mind that i wanted the tech lic so i could experiment/commuicate on vhf/uhf/microwave i did not see the tech class lic as a steepingstone to a genral lic as h.f did not thrill me.

If it wasnt for a ham friend of mine talking me into renewing my lic
i'd might have let my licence go altogather

Have a nice one all

Michael - N0JVT

Funny you should bring this point up. My brother, a fellow Ham too (General Class), asked that question at the Detroit FCC office. He works with a guy, whose father was the head of that office until he died a while back. So he has some indirect connections to the FCC office. When he asked about confiscated equipment, figuring we could get some great gear (modified Ham rigs) cheap, we found out you can't buy any of it, period. In fact the Detroit FCC office has a contract with a local junk yard, they won't tell who, where they take everything. One it gets there everything goes right in to the car carcass crusher, no exceptions.

If you think about it that does make some sense. Why would the FCC put equipment back out on the "streets" where some licensed Ham will end up selling it back to some CBer who then uses it on 11m again. I can just picture some Ham bidding on a pile of used illegal 11m junk, then going around to local flea markets selling it back to CBers at a nice "mark up". That sort of defeats the propose of enforcement don't you think?

1. These are the "try it out" licenses, and large levels of attrition are to be expected, particularly today with the small amount of personal investement required todo so. I don't find it at all surprising that lots of Techs drop out and have expected that to happenallalong, once the first 10 year license expirations were reached.

2. Novice? What good is that ticket these days, and why in the world would anyone keep one if he had any abiding interest in the hobby? a couple nobrainer written tests and a General is theirs. Anyone left with a Novice can be considered to be lost, with few exceptions.

3. In truth, if you did what I suggeste in my "patronizing" post virtually all the inclusions would wind up in the trash with the rest of today's junk mail, unread.

4. The Answer? I'm not sure we have a good grasp of the question. Aggressive action years ago on the part of our representatives -The ARRL- might have helped, but far too many of us left all that up to the League and our elected representatives to handle. They seem to have been too busy congratulating each other to notice what was taking place.

Dick

Do you have any serious suggestions, Dick, or is cynicism the best you can
do?

It is not necessary to hear your own echoes to be able to work EME. Some of the bigger stations will be quite workable.

My problem with all this is that McVeigh will be executed and the other criminals responsible will be forgotten. Indeed they already are. Anybody remember John Doe #2 .. the guy several witnesses saw with McVeigh both in the truck at the scene of the crime and before? Well, some investigative reporters checked into who McVeigh had phoned in the weeks before the bombing and showed pictures of them to witnesses who in turn ID's John Doe #2 as a German intellegence operator in this country to spy on neonazis; but a couple jurors who demanded to pursue that got kicked off the grand jury that indicted McVeigh. Then there were the seismeographs that recorded multiple explosions. Perhaps more telling is the testamony of USAF General Partin (sp?), an expert on bomb damage assessment, who said that McVeigh's fertilizer bomb couldn't possibly have done all the damage, and other explosives experts who said that some of the building's critical supports had been taken down by contact explosives. And the list goes on to include the commo clad leg found in the bomb crater.

I'm not complaining about McVeigh's punishment, I just want to know what happened to John Doe #2 and whoever set the charges inside the building. Stinks worse than the JFK assasination.

In order for anything to go before the FCC, it must be recorded. Better advice would be to record it and log all of the details.

By my recollection, there were no surprises on my Novice exam. Even the
General was all familiar to me, having read the 16 pages of General study
guide.

> > not counting the 120

Now You're Talking is the 200+ page ARRL Technician Class study guide.

> First I'm not the least bit convinced that the old Novice writtens
> were easier than the nocode test. When was the last time a nocode had
> to pull a schematic for a particular type of oscillator out of his

I didn't even have to do that for the General in 1964. The exam showed a
schematic and asked me what it was.

As to easier, there is absolutely no doubt in my mind that the 1963 Novice written was much easier than today's Technician exam. I have appended the text of the 1963 Novice Study guide. I read this for about a week or two before I took and easily passed the test.

ARRL Study Guide - 1963

CHAPTER 2

The Novice License

The Novice Class license offers an ideal way to get started in amateur radio -- reduced code speed and a simplified written examination. It grants a portion of amateur privileges on an "apprenticeship" basis for one year. The examination is available only by mail. This chapter explains the license in detail and contains sample questions for the written exam.

In an incentive to encourage a greater number of people to engage in the hobby of amateur radio, the Federal Communications Commission has established a Novice Class of license with greatly reduced requirements and only a few of the privileges available to amateurs. This class of license might well he termed an apprenticeship. It has a term of but one year, compared with the five-yea terms of other amateur licenses, and the objective is to give a newcomer a period of a year of actual on-the-air experience or training in amateur operation so that he may develop his skills toward one of the permanent classes of license more rapidly than he would by textbook study and audio-oscillator code practice.

The Novice Class license examination may now be taken only by mail, under the direct supervision of an amateur holding a General Class license or higher, or a commercial radiotelegraph license. This is true no matter where the applicant lives. Refer to the section "Examination Procedures " in Chapter 5 for details on the rules governing the routine for making application and obtaining a set of examination papers. Requirements for the Novice license are the passing of a code test in sending and receiving at the rate of 5 words per minute, and a written examination in the most elementary aspects of amateur regulations and theory.

The privileges which are currently available to the Novice licensee are:

3700 3750 kc. - telegraphy
7150-7200 kc. - telegraphy
21,100-21,250 kc. - telegraphy
145-147 MC. --telegraphy or voice

In addition, the transmitter used by a Novice licensee must be crystal-controlled, and may not have an input exceeding 75 watts. Of course, the

Novice may operate portable or mobile on any of these frequencies. (SeeChapter 7).

The most important point concerning the Novice license is that it is valid for only one year and may not be renewed. Before the end of his license term the Novice must qualify for one of the other grades of amateur licenses, or go off the air. He may try for a Technician Class or a General Class license (or Conditional Class, if eligible to take the mail examination). Whatever his choice, he must qualify for all requirements of the particular license class inasmuch as the Novice Class license, being obtained by mail, carries no credit toward a higher grade of license even where the examination elements are identical (such as the Technician 5 w.p.m. code test). He may not try for a class higher than those mentioned, of course, since experience as a Novice operator does not qualify for the service requirements for the Extra Class license.

Anyone who is a citizen of the United States may apply for the Novice, license, except a person who holds or ever has held an amateur license of any class. Thus a Novice not only is unable to renew his license at the end of his term, but he may not again apply for Novice privileges. If an applicant for Novice privileges feels that he can pass the standard written examination for amateur licenses but is unable to meet the 13 w.p.m. code requirement, he may simultaneously apply also for the Technician Class of license, taking the 5 w.p.m. code test, the elementary Novice written exam, and the standard written exam.

A Novice may operate any FCC-licensed amateur radio station, but only to the extent of the privileges available to the Novice and similarly available to the licensee of the station being operated. For example, when a Novice visits a station licensed to a General Class amateur, he may operate in only the Novice bands, using crystal control and with 75 watts input power or less. He uses his host's call sign exactly as issued, however. When a Novice operates a Technician's station, he may use only the 145-147 Mc band, since that is the only band common to both Novices and Technicians.

As stated, the written examination for the Novice license is quite simple. It consists of about 20 questions dealing with basic amateur regulations, and certain points of theory and technique. The questions are of the "multiple-choice" type, as explained in Chapter 1. There are no diagrams required. Following is a set of questions similar to those which are asked in the examination. If you are thoroughly able to answer each of these sample questions, you will have no difficulty in passing the written exam. However, in any event we recommend additional study of at least the technical material in How to Become a Radio Amateur and preferably of the introductory chapters of The Radio Amateur's Handbook ($3.50), both available postpaid from the ARRL, West Hartford 7, Conn.

The receiving code test for the Novice Class license consists of 25 five-letter words, mostly common ones. No punctuation marks or numerals are included. To pass, the applicant must copy at least 25 consecutive letters accurately. In the sending test, numerals and simple punctuation marks may be included.

QUESTIONS:

1. What is the maximum input power permitted to the final stage of the transmitter in a station licensed to the holder of a Novice Class license or operated by such an operator?

The maximum input power permitted a Novice is 75 watts.

2. What is the maximum penalty for a violation of the rules and regulations of the Federal Communications Commission?

A fine of up to $500 for each day during which the offense occurs, suspension of operator license, and revocation of station license.

3. On what frequency bands may the holder of a Novice Class license operate an amateur radio station?

3700-3750 kc.
7150-7200 kc.
21,100-21,250 kc.
145-147 MC.

4. On what frequency bands may the holder of a Novice Class license operate an amateur radiotelephone station?

5. What is the log of an amateur station, and what information is required to be entered therein? How long must it be preserved ?

The log of an amateur station is the written record of transmissions.
The log must show:
1) the date and time of transmission
2) the signature of each licensed operator operating the equipment and the name of any person not holding a license who speaks over a radiotelephone transmitter directly or by recording, or operates a teleprinter keyboard
3) call of the station called
4) the input power to the transmitter
5) the frequency band used
6) the type of emission used
7) the location of the station at the time of transmission
8) the message traffic handled

Information such as the input power, frequency band, type of emission, location of station, need be entered only once provided the conditions are not changed. Similarly, one entry of the date need not be repeated for other transmissions made on that date. If the station is mobile, the approximate geographic location can be indicated in the log.

The log of an amateur station must be preserved for at least one year following the last date of entry. Similarly, any message traffic handled must be kept on file for at least one year.

6. What is the term of an amateur Novice Class license? Under what conditions may this license be renewed?

The term of an amateur Novice Class license is one year. It may not be renewed under any conditions.

7. What are the rules and regulations regarding the transmission of improper language, false signals, or malicious interference?

The transmission of obscene, indecent or profane language, or of false or deceptive signals or call letters, or of malicious interference is expressly prohibited and there are heavy penalties for violation.

8. What are the rules and regulations regarding purity and stability of emissions?

Below 144 megacycles, spurious radiations must be reduced in accordance with good engineering practice, and must not cause interference to nearby receivers of good engineering design not tuned to the transmitter. Voice modulation of a transmitter must not cause spurious emissions; the maximum modulation percentage is 100%. Simultaneous frequency modulation and amplitude modulation is not permitted. The frequency of the signal transmitted must be as constant as the state of the art permits.

9. What method of frequency control is required to be used in the transmitter of a station licensed to the holder of a Novice Class license?

The frequency must be crystal-controlled.

10. What are the rules and regulations regarding the measurement of the frequencies of the emissions of an amateur radio station?

Regular measurement of the frequency of the transmitter is required. This measurement must be by means independent of the means used to control the transmitting frequency and must be of sufficient accuracy to ensure operation within the frequency band used.

11. Who may be permitted to operate the transmitter of an amateur radio station licensed to the holder of a Novice Class license?

Any amateur radio operator (though a Technician may operate a Novice's station only in the band 145-147 Mc., since that is the only band the two classes have in common).

12. Under what circumstances may an amateur radio station be used by a person who does not hold a valid license?

A person not properly licensed may not operate an amateur station. However, he may speak over the microphone of an amateur radiotelephone station or use the keyboard of an amateur radio-teleprinter, provided a duly licensed operator is present to control the emissions.

13. What is the maximum permissible percentage of modulation of an amateur radiotelephone station?

One hundred per cent.

14. At what intervals must an amateur station be identified by the transmission of its call sign? May any transmission be made without identification of the station?

An amateur station must identify its call sign at the beginning and end of each transmission and at least every ten minutes if a single transmission lasts longer than ten minutes. No transmission by itself may be made without identification of the station, except that during a sequence of transmissions each less than three minutes long, the call sign needs to be given only once each ten minutes as well as at the beginning and end of the work.

15. Under what conditions is notice of portable or mobile operation required to be given, and to whom in each case?

Notice of intended portable operation, or mobile operation, must be given the FCC Engineer-in-Charge of the inspection district in which such portable or mobile operation is contemplated only when the operation is or is expected to be for a period longer than 48 hours.

16. What are the recognized abbreviations for: kilocycles, megacycles, Eastern Standard Time, Greenwich Mean Time, continuous wave, frequency modulation, amplitude modulation?

kilocycles - kc.
megacycles - MC.
Eastern Standard Time - EST
Greenwich Mean Time - GMT
continuous wave - C.W.
frequency modulation - f.m.
amplitude modulation - a.m.

17. What is the relationship between a fundamental frequency and its second harmonic; its third harmonic, etc.?

The second harmonic is twice the frequency of the fundamental, the third harmonic is three times the fundamental frequency, and so on. A harmonic is always related to its fundamental frequency by an integral multiplier; i.e., 2, 3, 4, 5, 6, etc.

18. What is the relationship between a cycle, a kilocycle, and a megacycle?

1 kilocycle = 1000 cycles
1 megacycle = 1000 kilocycles = 1,000,000 cycles

19. What instrument is used to measure: electrical potential; electrical

current; electrical power; electrical energy?

Electrical potential is measured by a voltmeter.
Electrical current is measured by an ammeter, milliammeter, or microammeter.
Electrical power is measured by a wattmeter.
Electrical energy is measured by a watt-hour meter.

20. What is the purpose of: a modulator; an amplifier; a rectifier; a filter?

A modulator is used to vary the amplitude, frequency or phase of the output of a transmitter for the purpose of transmitting information. An amplifier is used to increase the amplitude, or power level, of a signal. A rectifier is used to change alternating current into pulsating direct, current. The purpose of a filter is to attenuate undesired frequencies while simultaneously passing, without appreciable attenuation, a desired band of frequencies and/or direct current. Examples: The power-supply "smoothing filter," which eliminates the alternating-current ripple from the output of a rectifier but permits direct current to flow with little or no attenuation; the "low-pass" filter, which attenuates all frequencies (such as harmonics of a transmitter) above a given frequency but passes all lower frequencies.

21. What is meant by: amplification; modulation; detection; attenuation?

Amplification is the process of increasing the amplitude, or power level, of a signal. Modulation is the process of varying the amplitude, frequency or phase of the radio-frequency output of a transmitter. Modulation is normally employed for the purpose of transmitting information. However, it may also occur inadvertently, as in the case of "hum" modulation of a signal resulting from ripple in the output of an insufficiently-filtered d.c. power supply. Detection or demodulation is the process of extracting the information contained in the modulation on a radio-frequency signal. Attenuation is a reduction in amplitude.

22. What is the purpose of: a radio-frequency choke; an audio-frequency choke; a filter choke?

The purpose of a radio-frequency choke is to oppose the flow of radio-frequency current while permitting direct current and audio frequencies to flow without appreciable opposition. The purpose of an audio-frequency choke is to oppose the flow of audio-frequency currents while permitting direct current to flow. The purpose of a filter choke is to aid in smoothing the direct-current output of a rectifier.

23. How is the actual power input to the tube or tubes supplying energy to the antenna of an amateur transmitter determined?

The input power is determined by measuring the direct-current plate voltage and the d.c. plate current to the tube or tubes in the final stage in the transmitter. The power input is equal to the plate voltage multiplied by the plate current in amperes. Example: Two tubes in the final stage of the transmitter take 50 milliamperes each, at a plate voltage of 500 volts. The total plate current is 2 X 50 = 100 milliamperes, or 0.1 ampere. The power input is therefore 500 X 0.1 = 50 watts.

24. Why are a rectifier and filter required in the plate power supply system of an amateur transmitter when operated from alternating current?

The amateur regulations require that an adequately-filtered plate supply be used on transmitters operating below 144 Mc. The rectifier is used to convert the alternating current into direct current. However, its d.c. output is pulsating, not constant, and the filter must be used to smooth out the pulsations so that the output is essentially "pure" -- that is free from pulsations or "ripple."

25. What is a frequency multiplier?

A frequency multiplier is a device that delivers output at an integral multiple (i.e., 2, 3, 4 times, etc.) of the applied frequency. The output of a frequency multiplier is consequently on a frequency that is a harmonic of the fundamental (applied) frequency.

26. What are the undesirable effects of overmodulation in radiotelephony?

Overmodulation results in the generation of spurious sidebands - that is, frequencies lying outside the band of frequencies or "channel" actually required for transmitting the information contained in the modulation. Those spurious frequencies, called "splatter," will interfere with communication on near-by channels and may even lie outside an amateur band. At close range they may also cause interference with broadcast reception.

27. What is meant by a "parasitic" oscillation?

A parasitic oscillation is one not essential to the operation of the equipment and usually occurring on a frequency considerably removed from the operating frequency.

28. What is the purpose of a "key-click filter" and when should it be used?

The purpose of a key-click filter is to reduce spurious radiation generally when keying a radiotelegraph transmitter. It should be used whenever required for suppressing such spurious radiations.

29. What is Ohm's Law?

Ohm's Law expresses the relationship between potential, current and resistance in any circuit.

It is stated as I = E / R where I = current in amperes, E = potential in volts and R = resistance in ohms. By simple algebra it is also E = I

* R and R = E / I.

30. What precautions should be taken to avoid the danger of shock from high-voltage electrical circuits?

Such circuits in transmitters and receivers should not be exposed where the operator can inadvertently come in contact with them when the power is turned on. All work on equipment involving the possibility of contact with such circuits should be done only after the power has been turned off. All power-supply capacitors should have bleeder resistors connected across them, to discharge the capacitors after the power has been turned off.

31. What is the relationship between the frequency and the wavelength of a radio wave if its velocity in space is 300,000,000 meters per second?

The frequency in cycles multiplied by the wavelength in meters is 300,000,000. Therefore, the wavelength is inversely proportional to the frequency; in other words, the longer the wavelength, the lower the frequency. The formula for calculating frequency (f) in cycles when the wavelength in meters is known is f = 3,000,000 / wavelength ; similarly, wavelength = 3,000,000 / f. Example: The wavelength of a signal whose frequency is 3700 kilocycles is 300,000,000 / 3,700,000 or 81.08 meters.

32. What symbol is used in the amateur rules to designate amplitude-modulated telegraphy without the use of modulating audio frequencies (on-off keying)?

Al. (The "A" indicates amplitude modulation, and the numeral "1" is used to indicate telegraphy by on-off keying).

33. What is the ruling regarding eligibility for reexamination?

An applicant who fails an operator examination may not take another examination for the same or higher privileges within 30 days (except that this does not apply to an examination for a General Class license following a mail examination for a Conditional, Novice or Technician Class license).

34. What factors are commonly responsible for harmonic radiation and what practical means can be used to detect and correct such condition?

The principal factors responsible for harmonic radiation are (1) improper operating conditions in the final amplifier, such as excessive grid bias and excessive drive, causing the tube or tubes to develop unnecessarily large harmonic output: (2) poor selectivity interstage tank circuits, resulting in excessive harmonic content in the excitation voltage applied to the final stage (3) inadequate selectivity in the final tank circuit because of too-low operating Q; and (4) insufficient selectivity in the coupling circuit between the final-amplifier tank circuit and the antenna, or omission of such a coupling circuit.

These defects can be corrected by (1) reducing grid bias and drive to the minimum necessary for reasonably efficient operation of the final tube or tubes; (2) using higher-Q interstage circuits, usually by increasing the ratio of capacitance to inductance or by decreasing the coupling to lighten the loading on the circuit; (3) adjusting the final tank inductance so that the tuning capacitor will be set for higher capacitance at the operating frequency: and (4) installing a tuned antenna-coupling or matching circuit between the transmitter and the transmission line or antenna.

The presence of harmonics in the output of a transmitter can be detected by the use of an absorption wavemeter, having a sensitive indicator, coupled to the final tank circuit or to the antenna coupling circuit, and successively tuned through the harmonics of the operating frequency. Alternatively, tests can be conducted with a nearby amateur station, with the cooperating amateur listening on the various harmonic frequencies while the transmitter is in operation. The receiving station should not be so close that the fundamental-frequency signal strength will be such as to overload the receiver and thus cause spurious harmonic responses in the receiver itself.

That's a big 10-fer good buddy. I'm sure you gets lots of horizontal
gain with a 4-ft-long half-wave antenna. These dumbasses don't even
recognize marketing hype when it's served to them on a silver platter.

I think this was ridiculous in the opposite direction. Personally, I would
love to see a 30-day waiting period rule. What is the required waiting
period if one fails a driver's license exam?

I don't recall any questions on the regs that were not covered in the
study-guide text.

> Of course the old tests aren't available for comparison (they were secret,

I am still trying. :-)

I don't see where it's that minor at all. If one of my kids got hurt because of someone driving down the side of the road, I'd hunt them down and slowly kill them. If someone scared them with a near-miss, their car would not be recognizable when I was done with it. In short, nobody screws with my babies, else I become the mother of all mother bears.

Lots of people take driving infractions lightly until someone gets killed. All of a sudden there is a great wailing and gnashing of teeth as everyone wonders what can be done to make our roads safe. For starters, might I suggest taking ALL laws seriously, not just the ones that fit your own personal agenda?

Those that make the policy decisions for the ARRL have no vested financial
interest in Amatuer Radio whatsoever. In what way are we following the
money and learning the truth, Larry?

> If I were anyone of any significance at the ARRL -- I'd be

The Board has not elected to do that. If you think that ARRL should
campaign as such, suggest it to Bernie. I know him fairly well, so I will
go out on a limb and say that I think he will not agree with you.

> If we get ten percent TOTAL growth in the next three years, I'll gladly
eat my words
> *and* another lobster dinner with you!

I will take that bet, Larry. Let's go with the Speroni site data for
5/1/2001 and 5/1/2002. Acceptible?

I'm with you, Gene. If you think I said "right down there", you are
mistaken. I ride a bicycle. Vehicles driving on the shoulder are
deadly weapons. What gave you the idea I consider it minor?

    BZZZZT. He's right.  It's called "unauthorized augmentation" and
    if the right auditor gets someone doing it in his sights, the
    "stuff" can fly just as fast as when someone spends Federal funds
    on personal things.

```

The criminal court finds whether the defendant did or did not commit a CRIME with a particular definition. The civil court finds whether the defendant committed a CIVIL "wrong" (tort) with a DIFFERENT definition. A civil court does not find anyone "innocent" or "guilty"; that's exclusively the purview of a criminal court. The civil court finds whether the defendant is liable for civil damages, which is usually money.

In OJ's case, the criminal jury found (rightly or wrongly) that OJ did not MURDER the victim (murder requires proof beyond a reasonable doubt of specific elements) but the civil jury found that he did, indeed, cause or contribute to the death of the victim (which requires proof by a preponderance of the evidence of different elements) and

```
  ruled only on what monetary damages he owed to the victims' familiies.

  Big difference.

```

Heil is invited to peruse electronics industry trade magazines instead of relying solely on amateur radio publications. One such document was the 50th Anniversary edition of Electronics magazine (biweekly published by McGraw-Hill) that presented (in 650 pages) a history of electronics and radio up to April 17,

1980. [Vince Biancomano was on the staff of that magazine at the time] There are just the briefest mentions of radio amateurs' activities and those are in the pre-1930s era.

The IEEE History Society has a great number of "milestones" in electronics and radio, notable advancements which have been done by true pioneers. Are there any amateurs of note there? [accessible by non-IEEE members on the web]

Those who actually search libraries, the web, industry sources, military sources rather than relying on the lodge hall fraternalism presented in ARRL publications will find scant mention of "pioneering" by radio amateurs.

It is my personal opinion that the ARRL offers a great many services for the radio amateur membership. That's a definite plus for them and nobody can deny that. Problem is, the ARRL is also guilty of a long-term, almost-patronizing viewpoint in its publications that yields the impression of radio amateurs doing the majority of radio pioneering. They have not done much in amateur-radio-only activities. The ARRL publications over-emphasize amateur "affiliations" of professionals engaged in radio and electronics as if the amateur affiliation is the only driving force behind their efforts. It seldom is, verifiable by any pick-up personal polling of electronics industry professionals done by other professionals...or by non-industry pros who don't have some agenda for propagandizing amateurism over and above all professionalism.

Amateur radio is an avocation, a hobby. It is also an arena which is a perfect launching pad for some who wish to dream of "superiority" in radio by virtue of "credentials" in radio which are not recognized as "superior" by the rest of the radio world.

>You are also the first to chastise anyone for presuming to speak for a
>group. Why not just say, "I think..." instead of leading us down the
>merry path?

No, not the "first." There are several others in here who seem to live solely for the chance to put down others for reasons of spite and petulance at their not being awarded the accolades they feel they richly deserve. :-)

Actually, given a perusal of archives, Heil is as guilty as anyone of failure to use the "I think" claim. Heil speaks as if he were the Voice of Ham Heaven come to "educate" the children. :-)

Do I speak for any "group?" Yes and no. My opinions on amateur radio regulations are generally shared with over two dozen acquaintences, only a few of which are "qualified" (by amateur radio license) to speak (be judgemental) about radio in general. I do not presuppose that this "group" is all-embracing with my own opinions due to "credentialized affiliation" with hundreds of thousands of similarly "credentialed" individuals who are of Heil's hive mind. :-)

>> Heil doesn't realize his own attitude towards anyone not "credentialled" as a "qualified" amateur is at the heart of such antagonism.
>
>Heil realizes that you have a personal problem with any radio amateur who doesn't kow tow to you because of your professional credentials.

No. I have never had any "personal problem" with other professionals concerning radio. Only with those amateurs who feel their amateur "qualifications," "credentials," and accomplishments are somehow "superior" to the professionals...including those who feel they can chastize other amateurs about law even though they are as amateur in such matters as anyone.

I have no especial credentials as a professional, have never claimed any. I do have some experience gathered over the last 49 years in a variety of radio applications. I have been fortunate to have had a rewarding career in a field that was and continues to be most fascinating.

There are a few in here who resent others' life experiences, will wave their credentialed affiliations as "superior" and seek actively to put down others who don't share their personal viewpoints.

>Do as I did? Hardly! Just go out and pass any current exam--even the Technician. If you'd like HF access, go for the WHOLE 5 wpm. You don't have to return to yesteryear, just come up with a ticket by meeting today's requirements.

Why is it so "necessary" that everyone "must" have this "qualification" to discuss amateur radio regulations?

Actually, Heil's insistence is null, a non-sequitur. If the FCC, who regulate amateur radio and set the regulations, does not require staff or commissioners to hold amateur radio licenses to perform their legal task, why is it so "necessary" for non-radio-amateurs to need such a credential?

>It's gotta be a snap for a smooth professional such as yourself.

Irrelevant sarcastic comment.

>You did want to join the ranks of radio amateurs did you not?

I've not stated that explicitly nor implied as such. Heil falls into the judgemental group that requires personal experience in something prior to talking of law, regulations covering something.

>I say this because you have a long history here of letting hams know how things should be.

Correction: How things should NOT be, specifically on the elimination of the unneccessary morse code test for an amateur radio license.

>You constantly post material in an amateur radio newsgroup so I would think that many assume that you have some interest in becoming a radio amateur.

Heil thinks wrongly. Heil makes assumptions without data and then tries to present them as "factual."

I do not post messages on other newsgroups concerning amateur radio activities. As I've stated before, my interest is eliminating the morse code test for an amateur license. This newsgroup is supposed to be the forum for that. However, it appears more as an arena where the self-alleged "superiors" can tell off the "inferiors" by any means possible. I do not think that is standard practice in amateur radio but if it were, it would certainly not be any enticement to "join the ranks."

>Otherwise, why the fixation?

Why the "fixation" with some who want to play "judge" to put down others just for the sake of putting them down?

Why the "fixation" with trying to immortalize regulations of yesteryear as the only "good and true values" of today?

Why the "fixation" with morality, sex, citizenship, intelligence, military policy, national policy, national politics, non-amateur radio services, and imposition of personal values on all citizens as shown in here on other threads?

It would seem those who will never ever have to take any amateur radio tests are highly FIXATED on keeping the regulations the same, cast in concrete, armor protected so that they can keep their "credentials" of "superiority" intact.

"If it ain't broke, don't fixate it."

Maybe not you personally. Just making a point that while many people
might consider something a very minor violation of the law, it might not
be so minor (and perhaps even for a very good reason) to another person.

it will be easier without any capitalization, of course, mr. hare.

maybe you can work out some arrangement with the e.e.cummings newsgroup?

of course, now everyone who wants to be serious has to
write fcc, arrl, fists, qst, cq, etc, to eliminate the trivial. those
will have real content, of course.

all the keyboards will have to throw their shift out...

As a lot of us have "Old Biker", but you know something? We never will.
Just like the JFK, RFK, Martin Luther King, and anyone that is against
'certain' folks and groups. We stopped living in a constitutional republic
in 1865. No, thats not a typo.

Dan/W4NTI

> > operators. The proceeds of these auctions would then be added to the enforcement fund to help pay for more apprehensions.
>
> Funny you should bring this point up. My brother, a fellow Ham too (General Class), asked that question at the Detroit FCC office. He works with a guy, whose father was the head of that office until he died a while back. So he has some indirect connections to the FCC office. When he asked about confiscated equipment, figuring we could get some great gear (modified Ham rigs) cheap, we found out you can't buy any of it, period. In fact the Detroit FCC office has a contract with a local junk yard, they won't tell who, where they take everything. One it gets there everything goes right in to the car carcass crusher, no exceptions.
>
> If you think about it that does make some sense. Why would the FCC put equipment back out on the "streets" where some licensed Ham will end up selling it back to some CBer who then uses it on 11m again. I can just picture some Ham bidding on a pile of used illegal 11m junk, then going around to local flea markets selling it back to CBers at a nice "mark up".
> That sort of defeats the propose of enforcement don't you think?

Agreed, the piles of crap radios, i.e. Cobra, RCI, Galaxy, etc. should all be put under the hammer. However, a lot of these pirates are running good Yaesu, Icom, and Kenwood gear which have only had the "MARS" diode clip mod done.

Additionally, a system could be put in place where the items were sold to specific licensed individuals for personal use only. There is a similar program in place where the military sells surplus M1 Garrand rifles to qualified civilians on a one by one basis.

Like I said in an earlier post, I only gave it five minutes of thought. If addressed seriously by the right people a workable system could be established. After all, this is America and I don't believe that all of the ingenuity and problem solving skills we once possessed as a country are all gone. I know there are current regulations which might prevent the concept execution, but regulations can be changed once it was shown that it would benefit the public and help with the enforcement effort.

I guess it boils down to one's mindset - is the glass half full, or half empty? :>) As with all issues, change takes effort. The greater the change the more effort it would take. But nothing is impossible, and if only half the effort put forth in complaining about the issue could be applied to creating a solution, it would become a reality.

But that's the catch. Just like the code issue, for many people it's easier to complain about it than to put forth the effort to achieve it. It's easy to get a large group of people to agree to a concept, but when you ask the individuals to "put their money where their mouth is" all of a sudden your group has evaporated...

If this thread has done nothing but made people think about solving the problem, then it had done it's job. Who knows what may develop over time...

Lots of STUFF to do at www.ab7sl.com such as...

All - NEW - W9INN antenna page!!

1. Ham Radio Links (some unusual)
2. Several Ham Radio Web Rings !
3.AB7SL Biography
4.Personal Photos
5.Station Description
6.Software Downloads
7.The DX Page (w / Telnet links)
8.Downloadable IOTA List
9.W7NH - Elmer Tribute
8.Prescott Arizona Page
9.Online DX Logbook
10.3D Art Gallery (downloads)
11.Music Page (downloads)
12.Frequently Asked Questions
13.Free-For-All Links Page
14.Guestbook
15.Equipment Photos
16.Downloadable DXCC Countries List
17.Downloadable ITU Prefixes List
18.W9INN Antennas Page

......aside from the references to Kenwoods comments. Beyond
referencing comments, the FCC gave no indication that they were
"influenced" by anyone.

Do you mean that people should take the laws that prohibit the vigilante
actions you described in your first paragraph seriously?

Why? It reads the same either way.

And this is supposed to illustrate how Morse code keeps people from
advancing the art of amateur radio state?

I guess you will never understand the meaning of opinion, Len. I am willing to let it rest.

> An example of the urban myth is the already-code-tested who
> continue in the Belief that renewal-time Technician class
> licensees will not renew, that they were never active, along with

I will let this rest, too. If you want to persist in misrepresenting my statement that those Techs who are not active will not renew, you are welcome to do so. You look a bit foolish, but you are welcome to that, too.

> >I wasn't trying to change the defintion of speculation or anecodtal, Len.

Too bad the blanket statement didn't say that, eh? Nice "spin," though.
For the life of me, I can't figure out what you are trying to accomplish.

i heard the big gun station down in Tx several times
i can't remember the call but he was loud & clear...
I would have kept after eme if i didn't have to move in to
a apartment and give up my array up on the roof

it was fun while it lasted though.... i may give in and go to the
general class and work PSK-31 on 20 Mtrs

Have a nice one and 73

Um... Either you're being ignorant, or you're trying to test me...

either way.. my answer is...

DUH!

SSB radio emissions have no carrier.

-SSB

Um.... Ok...

So I drive a truck.. Big Deal. I have never cophased antennae on my
truck. I find it counterproductive to even attempt to do so.

But if you want to play CB games...

Uh, 10-9 good buddy?

When looking at national policy, you can't just look at personal

health care costs, Jim. There are also social and economic issues to
consider. In other words, it is not just a matter of what you put
into your body, but also how your body affects the rest of society as
a whole. You do not live alone - you live in a world filled with
people affected in one way or another by everything you do.

I think we've been here before, Ed. We're not reading off the same
page because we come from chronologically close but in many respects
significantly different "eras" in ham radio if you will. I got into
ham radio two years after the Novice license was created, you got into
it 12 years after the license was created. 1963 Novice ham radio was
quite different from 1953 Novice ham radio wrt to the equipment.
Reasonably priced ham/swl catalog receivers of course were out there
in some volume but there were very few "Novice transmitters" for

instance so almost all of us 1953 types had to do all kindsa soldering
iron pushups to get on the air. A 32V3? Me? Yeah, right . . ! I was
making seven bucks a week delivering the Evening Bulletin
>
By 1963 the catalogs were overflowing with low-end Novice gear from
Heath, Johnson, Globe, Knight WRL and a bunch of others thus plug 'n
play Novice ham radio became far more available when you got there.
Pull 1953 and 1963 QSTs and lookit the ads.

>
Whoa! I have *never* stated that attaining any of the test speeds was
"easy". I had to work my buns off to pass all three of the code tests
I took and I flat out flunked the 13wpm test the first time I took it.
I have a glitch, I've always been able to copy the stuff in my head
far in excess of the license requirement. But I still have to struggle
to get 20wpm on paper vs.the 30wpm I coast along with on the bands.

Yeah, Len, I read about that in 1964. They used a converted SCR-271 radar - the
same kind used at Pearl Harbor in 1941. Hardly "state of the art" in 1946.

111.5 Mc. is not an amateur frequency, and wasn't one in 1946. What does
Project Diana have to do with amateur EME?

> For a technical
>explanation, block diagrams, photos, go to:
>
>   http://www.campevans.com/diarnof.html

And you'll get "that page does not exist".

The correct URL is:

http://www.campevans.com/diana.html
>
>Project Diana was done 55 years ago.

So? It was a moon RADAR experiment, not a communications system.

> By technically knowledgeable
>individuals who actually advanced the state of the radio art.

Nobody disputes that. How many taxpayer dollars were spent on that project? What would that be in today's money?

> No CW
>or code skills involved.

Wrong. The mode used was OOK CW. The echoes were heard as beeps. Had there been a second station, communication could have been done by Morse.

No Morse was used because no communication was done. There was no second station to communicate with.

> The US Army Signal Corps personnel,
>including civilians of Evans Signal Labs, didn't need amateur radio
>licenses or passing code tests to make them "qualified."

Who said they did? We're talking about amateur radio, not the military-industrial complex.

Those Diana folks had a some hams involved, though - all code tested at at least 13 wpm:

Lt. Col John H. DeWitt, officer-in-charge, W4ERI, ex-W4FU
E.K. Stodola, head of the lab's Research Section, W3IVF
F. Elacker, Mechanical Engineer, ex-W2DMD
H.P.Kaufmann, W2OQU was also involved at a high level.

Those are just the hams I know of that were involved. There were probably more. Note that a good number of the top people were radio amateurs.

They used power levels 9 dB above those permitted to amateurs at the time, and an antenna that was quite beyond "backyard construction". They had lots of resources.

Lt. Col. DeWitt, W4ERI, was the driving force behind the whole idea, which he first began working on in 1940.
>
>Have NCTAs claimed that the code test was a "barrier" for the
>"technically knowledgeable?"

Yes. Many, many times. There is also a companion claim that "So-and-so is more than qualified to get a ham license because of (fill in professional/academic achievement here) but the code test keeps him/her out".

> Maybe one or two,

More than that. Even Kenwood made that claim in its comments to the FCC.

> but the over-
>whelming use of that phrase in here has been a mantra of the
>PCTAs' dissing of NCTAs...

Nonsense. It has been a rallying call of many nocodetest advocates.

>as if the PCTAs accomplished so
>much in the way of "advancing the state of the amateur radio
>art."

By your standards, no radio amateur has ever done anything of technical value in radio, Len.

Was the 2 way low power EME contact reported here done by noncodetested amateurs? Yes or no, Len?

> As a claimant to "amateur radio historian," N2EY should
>look up the first amateur moonbounce to see when it was done
>and by whom (amateurs who were also working in the
>radio-electronics industry) and with what (see a number of
>mentions of equipment "loans" done by industry).

How do you define "amateur moonbounce", Len? Hearing one's own echoes, as was done in Project Diana? One way reception between two different stations via the moon? Or a 2-way contact over a considerable terrestrial distance?

I already know when all three of the above were done by hams. Do you?

Only the 2-way QSO used loaned equipment, in the form of rusty old surplus dishes and a high power tube or two. They used available resources. They were not paid for their efforts.

They used Morse code for the 2-way QSO, too. Is that the problem?

What does any of this have to do with the excellent achievement of W7SZ and W7LHL? Nobody claimed their achievement was the first EME contact.

Have any of those paid professional " technically knowledgeable individuals" managed 2 way EME radiocommunication using low power (<10 watts), and modest antennas (<2 meter dishes)?

"Advancing the state of the art" isn't just doing something for the first time, with huge resources. It's also doing more with less.

N2EY

That sounds good. The credit for the written elements are good for a year I think. If you
can find somebody to practice code with that would be great help I'm sure.
Depending on your finances, if your looking to save some money, check out
some of the local Hamfests in your area. The ARRL web site has a list of
them all over the country. A used radio can save you a big chunk of coin.
That's maybe your best bet until you figure out what you want or need in the
way of features in a rig. Once you know that then you are in a better
position to spend some money on a new, or newer, radio knowing it will do
what you want. Also don't let some of the Old Timers on this news group get
under your skin either about anything. Some like to take cheap shots at Tech
Class operators. Regardless of what class license you get, or the code speed
you test at, your a Ham at that point, and don't let anybody tell you
different.

That probably went right over Larry's head. Anyone unfamiliar with Star Trek
wouldn't know what you were talking about.

I don't question the legality of freebanders. I quesiton the FCCs failure to do anything about them.

The last time anything was done was a sweep about ten years ago that nabbed nearly 40 violators. It's time to do it again.

In other words, you believe a person's life belongs to the state, not to the person. So have all the other socialists and fascists down through history. Libertarians, OTOH, believe that a person's life belongs to that person. Thus our philosophical differences.

Libertarians believe that a person has an inalienable right to mistreat his/her body if he/she so chooses. You believe that a person must be protected from himself/herself. So don't whine when your freedoms are completely gone in the name of protecting you from yourself. Hope you don't like beefsteak and ice cream.

>Somehow, the term "freebander" makes it sound so noble. Substitute "federal
>felon" for the term "freebander" and see how it reads.
>

In the news this morning, a man from <your pick> state was issued a "Notice of Apparent Liability" in the amount of $17,000.00 for operation of a radio transmitter on unauthorized frequencies. John Q. Public (Enemy?) was using a modified CB radio to talk with other unauthorized radio operators, also known as "federal felons" on the frequencies directly above the citizen's band and below the 10 meter ham band.

Unlike other citizens accused of crimes, these "federal felons" are guilty until proven innocent in an "administrative" court of law. The onus is on these "federal felons" to take their case to court or pay their relatively minor "NAL" fine, similar to a traffic ticket. These "federal felons" have 30 days to pay their fine.

In other news this morning; President Bush answers more questions re. his charge of drunk driving.; Four NY polive officers are acquitted of murder charges after firing forty-one rounds into a man reaching for his wallet in the vestibule of his home.; Former President Clinton pulls in a cool million on the lecture circuit to help pay his rising legal fees.; A police officer arrests, cuffs, and drags a soccer mom from her car for not having her seat belt fastened...all this while her terrified kids look on. NOTE: Seat belts are designed to protect us from harm.

Todays weather forecast...there's a storm on the horizon.

Yeah, Ed...sound much better. Take care and 73.

Mark

If I did not make it clear, above, that it has been "so very importantly
pointed out many times in this NG that things stated as facts should have
true statistical reference," then let me clarify now: *I* have not ever made
that point--nor would I. But it has been made, many times. At most, I used
that statement as a lighthearted reason to feel "justified" in asking you
for references--i.e., I was not trying to establish an argument.

> We are not
> professionals, and this is not a professional discussion. In most
> cases, the things written here are pure opinion, not absolute fact
> (and few claim more than that when posting).
>

Then what appeared to be factual statements you were making were, indeed,
opinion. Thanks for the clarification. I'm glad you are one of few who can
recognize that the hugest part of this NG is nothing more than
opnion--although many, in an attempt to denegrade and insult those with whom
they choose to disagree, also choose to validate themselves in some sort of
defense hidden in factual references they cannot provide.

>   A requirement to substantiate (through statistical reference or some

>

But, imagine how much more intellectual the conversations could
become--perhaps even constructive! : o And, so much better representative
of ham radio as a whole.

>   Furthermore, while reference and verification are important in

> professional discussions, so are the unsubstantiated opinions of those
> professionals, and the unsubstantiated opinions of those who view the

>

I hope those who have demanded references for others' opinions (as a way of trying to "prove" others wrong) are reading your comments. It would be nice to believe that those participants in this newsgroup--when confronted with the potential of having just expressed "hype" rather than facts--would remember your words.

> As for your determination not to allow the unsubstantiated opinions
> posted in newsgroups to affect your own opinion, perhaps I should
> remind you that this is not that different then the way opinions are
> often formed outside of newsgroups - through discussions with friends,
> co-workers, associates, and neighbors.

You make quite an assumption above. It is a given that I cannot, nor wish to, allow or disallow, unsubstantiated opinions posted in newsgroups. I have *only* ever posted opinions--nothing more--and they haven't even been based on any references other than my observations in life. Please subside your opinion that I am making any determinations about the abilities of others to post here in this newsgroup! The premise I made in my request to you is that I believe quite differently than you on the issues--often hear the same arguments that you present; and had decided it might be worth invetstigating. Rather than try to collect the data myself and make a feeble attempt at correlating it--maybe there is a good reference "out there" somewhere that has the information.

> And I would find it very hard
> to believe that you have never changed your own opinion based on
> something said by others in your life.

I cannot remember a time that I have changed my opinion based just on something someone has said. I am very opinionated. I also accept the opinions of others. When facts, however, are brought to bear, I don't mind at all considering them, and often have had to "rethink" the *way* in which I arrive at my opinion of something--maybe even change my opinion. Consider that most major issues in life are so affected by more than most of us care to become involved with, that opinion is probably the safest bet to rely upon. (That is my opinion, by the way).

> Now that is not saying that
> you should suspend common sense and believe everything you read here

When I used to participate in this newsgroup, I found "intellectualism" severely lacking. Most people here that inspire even the slightest of

feelings that we'd rather not admit we're capable of (I'd love to believe I
can't truly despise another human being--but there are people in this
newsgroup quite capable of bringing that emotion to the surface of my
expressions). In my opinion, any topic presented here, by the second or
third post, has denegraded into nothing more than denegration of others--the
topic being lost in the insults that fly. I dare say the only "awareness"
or "belief" that I got from participating in this newsgroup for nearly a
year is just how mean some people really can be to others--using their
"opinions" as the means to express that hate and anger (bigots-perhaps).

>   By the way, as for the message you asked me to cite, you caught me

>

I think I'd love to perview some of them--if you'd care to point me in the
right direction. I'd also caution, and you already know this, that even
professional statisticians will tell you that facts and statistics can,
generally, be swayed by the very way in which data is collected. I know of
very few times I have heard "expert" opinions able to be argued against by
other "experts." It is all very interesting, indeed!

I understand your anger, Steve, definitely. But, Timothy McVeigh didn't care or flinch a bit when he did what he. Never did, never will. Neither will any others who will come after him--and his death, nor anyone else's, will change their mind or suddenly "make them realize" that they're wrong.

We don't have to "tolerate" terrorism. It will happen whether we tolerate it or not.

Not so...the burden of proof is always on the FCC to show that the operator was in violation.

You may not have been around r.r.a.p. a while back when I posted a detailed breakdown of the law and procedure that the FCC follows in both monetary forfeitures and equipment seizures. In strict compliance with US law, the burden of proof is always on the government to show that the violation occurred, and, where appropriate, that the accused was the violator. The accused always is given the opportunity to offer proof that the violation did not occur and, where appropriate, that s/he was not the violator.

It may appear to the outsider that radio law violators are "guilty until proved innocent" but that is because it is long established procedure that the FCC will not bring a case unless they have slam-dunk cold proof that the violation occurred. It was my job for many years to review each case before issuance of an NAL or referral to prosecution to determine that the evidence met those standards, or else the case was dropped.

The best way to avoid getting involved with this - don't do the violation.

The test itself DID have some "sketch the...." but what I recall was
the 'Draw a block diagram of a superheterodyne receiver" and 'Draw a
block diagram of a MOPA transmitter with buffer stage" sort of thing.
I also remember some 'Draw a diagram of a Colpitts (or Pierce)
oscillator'. That was on the General.

  What is the relationship between a megaphone and a microphone?

The Signal Corps was always loaded with licensed hams. When I was at Fort Monmouth in the early 60's the NYC office of the FCC sent a testing team down to the Fort on a Saturday to conduct a field test session. The crowd of GI's taking all sorts of FCC tests nearly swamped the facilities. I knew a lieutenant, a ham and a EE, who took and passed everything they FCC had to offer that day, amateur and commercial.

You shoulda seen the Ham Radio club and MARS station. A WW2 vintage double decker building with some dozen different stations set up so that most could be on at the time on different bands and modes, through 2 meters. Collins, Johnson, National, Hammarlund equipment too numerous to describe, along with my favorite, a station running a T368 transmitter and an R390A receiver, on CW. Beautiful.

Full size Signal Corps rhombic mounted on 75 foot utility poles. 40 meter full size tribander at 50 feet, just for openers. Also had a couple VHF stations set up. Even had some early transistorized solar powered stuff. Pretty much the epitome of Ham Radio communications at the time.

Len still chafes because he was too lame to knuckle down and get the code so he could join in. Still bitter 40 years later. Whatta shame. And he has plenty company, unfortunately.

Enforcement usually boils down to economics. The FCC handles a lot of spectrum, with a minimum of budget and manpower. As usual, the "customers" with the most money - like commercial interests - get the best service.

Since there are so many hams and members of the general public that support more enforcement maybe we could establish a fund that would be used specifically to subsidize increased FCC enforcement of the spectrum at issue. I would be glad to donate on regular basis to such a fund provided it showed results for my money.

I don't mean that we should just send our money in, and hope it gets used for the purpose intended. Rather, let the FCC establish a cost figure for the apprehension of each offender. Then, on a monthly or quarterly basis they could submit to the fund manager a list of those offenders caught during this time period- and the disposition of each case.

The fund manager would review the cases presented, and reimburse the FCC - on a percentage basis, 50-50, 30-70, etc. - for those apprehensions which were of benefit to the ham community.

It could be similar to the programs used by police where they get a piece of the proceeds from each drug bust where cash and/or property is confiscated. Since many of the offenders that would be caught would also be in possession of radio equipment that could be of value to legitimate radio services, this equipment could confiscated and auctioned off to licensed operators. The proceeds of these auctions would then be added to the enforcement fund to help pay for more apprehensions.

(and once a search warrant was executed I wouldn't be too surprised if they found drugs, stolen property, etc. during the search that could also be confiscated - and would generate additional criminal charges for the suspect)

Therefore, the harder the FCC worked, the more they would receive in return. This would change the FCC enforcement efforts from an overhead expense, into an actual profit center - a very rare thing in Government.

>
>Yeah, Len, I read about that in 1964. They used a converted SCR-271 radar -
>the same kind used at Pearl Harbor in 1941. Hardly "state of the art" in 1946.

Delete the word "converted" and insert "highly modified."
The project was begun in September 1945, was
experimental. There was not a great deal of funding
for experiments in the immediate post-WW2 period.
The 64-dipole "bedspring" antenna (24 dbi gain) was left
over from wartime work.

>111.5 Mc. is not an amateur frequency, and wasn't one in 1946. What does
>Project Diana have to do with amateur EME?

Project Diana is the first, repeat first, moonbounce
demonstration. Someone had to be first. In this case
the US Army Signal Corps was first.

>> For a technical
>>explanation, block diagrams, photos, go to:
>>
>>   http://www.campevans.com/diarnof.html
>
>And you'll get "that page does not exist".

True. I mistakenly typed "diarnof" instead of the
correct "diamof." My error.

For a technical explanation, block diagrams, photos,
of the article "Radar Echoes From The Moon," by

Jack Mofenson (apparently from an Electronics magazine article of 1946), go to:

http://www.campevans.com/diamof.html

>>Project Diana was done 55 years ago.
>
>So? It was a moon RADAR experiment, not a communications system.

Not according to Jack Mofenson, one of the civilian experimenters. There was no need to use RADAR (or radar) to find the moon. Astonomers already knew were it was, is, would be.

The whole point of Project Diana was to use the moon as a REFLECTOR of radio waves as a supplement to the irregular ionospheric conditions of HF. This is clearly stated in Jack Mofenson's article copy on the (corrected) web address given.

Note: One can get a link from www.campevans.com/diana.html to the Mofenson article copy...it is given near the bottom of the "/diana.html" page.

>... How many taxpayer dollars were spent on that project?
>What would that be in today's money?

:-) How is that relevant except to open up yet-another thread of diatribe about "wasteful government spending?"

Project Diana was done FIFTY FIVE YEARS AGO. No doubt that somewhere in a warehouse there are records of accounting dating back to 1945-1946 concerning Evans Signal Corps Laboratory (part of the triad of Coles-Evans-Squire Labs that I passed many times just outside of Fort Monmouth, NJ, in 1952).

If OLD records are "so important," why not go into a separate thread on the wanton waste of WW2 radios that were sold as surplus to civilians beginning in 1946. "Command Sets" and BC-358s were very popular items back then...to hams that were in existance then.

How many taxpayer dollars were spent on those surplus Command Sets where brand-new-in-the-carton receivers could be bought for $6, transmitters for $12, antenna-coupler and modulators for $18?

>Wrong. The mode used was OOK CW. The echoes were heard as beeps. Had >there been a second station, communication could have been done by Morse.

What would be the object of using morse codings in a REFLECTOR

experiment? The original "keyer" was mechanical, later replaced
with an "electronic keyer" variable over a 0.2 to 2.0 second "on"
time. That's not the highly-touted/prized/triumphantly-presented
greater-than-20-WPM copy-in-the-head sort of environment said to
be the ultimate achievement in amateur radio (according to PCTAs).

>No Morse was used because no communication was done. There was no second
>station to communicate with.

Yes, and Heinrich Hertz, "fooling around in a lab" never pioneered
anything about EM waves, either. :-)   [but he did use Spark]

>> The US Army Signal Corps personnel,
>>including civilians of Evans Signal Labs, didn't need amateur radio
>>licenses or passing code tests to make them "qualified."
>
>Who said they did? We're talking about amateur radio, not the
>military-industrial complex.

"MILITARY-INDUSTRIAL COMPLEX" in 1946?!?!?   :-)   :-)   :-)

>Those Diana folks had a some hams involved, though - all code tested at at
>least 13 wpm:
>
>Lt. Col John H. DeWitt, officer-in-charge, W4ERI, ex-W4FU
>E.K. Stodola, head of the lab's Research Section, W3IVF
>F. Elacker, Mechanical Engineer, ex-W2DMD
>H.P.Kaufmann, W2OQU was also involved at a high level.

Oh, wow, yes, cribbing from a later ham publication source.

Oddly, the Jack Mofeson article copy doesn't mention ham
licenses. The OIC, Col. DeWitt, is described as "former
chief engineer of WSM." Of course, McGraw-Hill's
Electronics biweekly wasn't oriented towards amateurs. :-)

>They used power levels 9 dB above those permitted to amateurs at the time,
>and an antenna that was quite beyond "backyard construction". They had lots of
>resources.

Scrap. Left-overs. Evans Lab didn't erect that tower to do
Diana...it was already there as was the bedspring.

>Lt. Col. DeWitt, W4ERI, was the driving force behind the whole idea, which he
>first began working on in 1940.

Really? Mofeson's article says that Project Diana "began" in
1945. Mofeson must be in error then, right?

>>Have NCTAs claimed that the code test was a "barrier" for the
>>"technically knowledgeable?"
>

>Yes. Many, many times.

Error. Faulty memory.

Firstly, there is NO valid necessity for a code test except in the
personally-possessive, do-it-like-I-did-it attitude of the PCTAs.

Secondly, the code test TURNS AWAY those, certainly those
with previous radio experience, from bothering with a license
test involving morse code.

>Nonsense. It has been a rallying call of many nocodetest advocates.

Delusion, rationalization. The FCC said that morse code
ability was not of use in determining licensing of radio
amateurs. In 1990 as well as in 1999.

Is the FCC guilty of some "rallying call?" I don't think so.

>By your standards, no radio amateur has ever done anything of technical value
>in radio, Len.

Error. Incorrect. False charge.

Insofar as the ENTIRE RADIO WORLD is concerned, the state-of-the-art of all of radio has NOT been much improved since the
early US amateur radio operators were reallocated below 200m
wavelengths. The resulting proof of long-distance propagation
prompted more research into HF by academics, industry, and
the military. Radio astronomy got its essential start through
the efforts of an experimenter who was also a radio amateur.
[radio astonomy has not yet proved to be "communications"
in the N2EY absolute definition...:-)]

>I already know when all three of the above were done by hams. Do you?

No. I've only sent commands to a station on the moon and
received a "reply" from that. :-)

>Only the 2-way QSO used loaned equipment, in the form of rusty old surplus
>dishes and a high power tube or two. They used available resources. They were
>not paid for their efforts.

So...it's okay to use "available resources" if they are amateurs,
but it's "military-industrial complex" stuff if done by pros?   :-)

>They used Morse code for the 2-way QSO, too. Is that the problem?

Why does N2EY ask?   :-)   :-)   :-)

>What does any of this have to do with the excellent achievement of W7SZ and
>W7LHL? Nobody claimed their achievement was the first EME contact.

Someone had to be first. Were these two radio amateurs the
first amateurs to do moonbounce? [excuse me, EME in the
correct parlance] Were they they first ever to prove the earth's
moon could be a radio wave reflector?

>Have any of those paid professional " technically knowledgeable individuals"
>managed 2 way EME radiocommunication using low power (<10 watts), and >modest
antennas (<2 meter dishes)?

I don't know, suppose that N2EY tells me.   :-)

One can look into NASA communications for the entire Apollo
project and find out power levels and all technical information
on vehicle communications as well as the ALSEP stations
(Apollo Lunar Surface Experiment Package) set out on the
moon. Apollo didn't use CW. Besides, it was done by the
"military-industrial complex" and so it isn't imporant here, right? :-)

How about the unmanned space vehicles? Their transmit
powers aren't large but they are surely in communications at
DX ranges. Nope, they don't count either...done by the
"military-industrial complex" and not a single one of them
used morse code for communications. Can't be important
or pioneering if those didn't use CW.

Pioneering isn't pioneering unless it involves "qualified-by-test"
CW. So let it be codified by the sages in here. :-)

In article <3af2ecba.165475562@news2.dvol.com>, kelly@nospam.dvol.com (Brian

Kelly, w3rv) writes:

>>Passing any or all of the test elements, including the code test,
>>is not an intellectual triumph. :-)
>>
>. . . particularly since copying Morse has little or nothing to do
>with intellect.

I'm glad that an Extra finally admits such... :-)

>>>The question is how many of the nocodes have
>>>remained active? Nobody knows.
>>
>>It would seem that some do know, else why would they charge
>>that "nocodes" were not active.
>>
>I just said "nobody knows". I know a helluva lot of hams. I know more
>inactive nocodes on a percetage basis than I know inactive hams with
>other licenses.

So, Kelly specifies conditions for the entire 50 states on the
basis of personal acquaintences?

>>An amateur radio license is just a regulatory mechanism
>>used by the FCC as part of its task to regulate US civil
>>radio. None of the test elements are either "intellectual
>>triumphs" or academic achievements. Amateur radio is
>>not essential to the well-being or safety of the nation's
>>citizens taken as a whole.
>>
>If ham radio didn't exist to give you something to rail against your
>life would be even more dismal than it is. Be thankful we're out here.

Now, now...Kelly is getting heated and losing a sense of
subjectivity (few Extras can claim objectivity). :-)

>>>So what? Is that some kind of surprise? The nocode is the easiest
>>>test. Why WOULDN'T the necomers opt for a nocode ticket?? I got into
>>>the game as a Novice for the same reason.
>>
>>Kelly got a Novice license without taking a code test?!?   :-)
>>
>Of course not. But if the nocode had been out there then I might very
>well have grabbed one while I working on passing the Novice test.

Hmmm...according to tRoll, such "laziness" isn't part of the
WORK ethic to which he aspires. According to him and
(judging from message content) Kelly, amateur radio is all
about morse code skill.

>>It seems to me that the government does indeed look into
>>statistics of such things as licensing in its task of regulating
>>radio.
>>
>In the long term of course. Count on them not giving a hoot about the
>stats changes between last April and now having any significance wrt
>to regulation but which are all the rage in this NG.

Kelly has "insider" information on FCC decision-making?
Interesting, that makes a total of three in here with such
insider information who know all about FCC internal workings.
Amazing.

>>Joe Speroni, AH0A, is an evident PCTA, on public record as
>>being an advocate of amateur radio code testing. Speroni has
>>been tabulating amateur radio statistics for about three years
>>now. Is Speroni "asinine" for doing that task?
>>
>No, it's the way his stats get tossed around which is asinine.

Hmmm...if the stats were to favor the ethos and mythos of
Kelly's ideas about US amateur radio, would the "tossing
around of stats" still be asinine?

>The FCC is not about to take any action on micro-count stats like the
>churning of the month-to-month numbers. They look at trends over
>significant periods like the 5 & 10 year curves and that's also all I
>can be bothered with. Which is why I don't pay any attention to the
>Speroni site.

Translation: "I don't like the way the trends are going, therefore
I don't pay any attention to them." :-)

>>>Band occupancy and spectral efficiency mean everything.
>>
>>So...how is the 2mm band occupancy in Kelly's geographic
>>area?
>>
>Loaded but with plenty of unused freqs. You think occupancy doesn't
>matter? Ask the PA State Troopers, the FCC monitored then grabbed a
>flock of their underutilized freqs a few years back and "refarmed"
>'em.

The 2mm amateur band is 142 to 149 GHz. Whether or not any PA
State Troopers use that band, or any others, is irrelevant, but I digress...

>>It is 7 GHz wide, the largest bandspace allocation for
>>Region 2 amateurs.
>>
>What?? The 2m band here runs from 144 to 148 Mhz. Back to remedial

>math for you, Lenny.

No, it is back to remedial reading for Kelly.

I wrote "2mm," not '2 m.' "mm" = millimeters.

I also wrote a deliberate misstatement to see if Kelly understood.
The 2mm band is NOT the "largest bandspace allocation." The
1mm band is, at 9 GHz bandwidth, going from 241 to 250 GHz.
In all three Regions of the ITU. Kelly didn't understand.

Kelly seems unacquainted with the 14 allocated ham bands
above 2 METERS. Tsk, tsk, tsk.

[a typical Kelly comeback is expected to this...]

>>Does Kelly advocate dropping all VHF
>>and higher amateur bands because their use does not show
>>"spectral efficiency?"
>>
>Of course not again, Lenny. But then the FCC might not give us any
>options but to get more spectrally efficient, eh?

Without the "special talent" of "insider knowledge" of the FCC, it is
difficult to tell, isn't it?

Kelly never defined anything specific about "spectrally efficient."
No doubt this would have to feature OOK CW codings.   :-)

>and an R390A receiver, on CW. Beautiful.

Interesting how the "military-industrial complex" can build up a place. Probably did all that "testing" at the Molly Pitcher Hotel which caused all the "crowding".   :-)

Just ten years before (1952) I was at the Signal School at Fort Monmouth, NJ, and their amateur radio building was small, single-story, had only two operator desk positions with older commercial equipment. No big antennas that I recall, just some poles set in the ground with wire antennas. I could be wrong, of course (since I don't champion morse code testing) and it was 49 years ago but, of the two times I was in and at the little amateur building, it didn't impress me.

> Full size Signal Corps rhombic mounted on 75 foot utility poles. 40

>the time.
>
> Len still chafes because he was too lame to knuckle down and get the
>code so he could join in. Still bitter 40 years later. Whatta shame. And
>he has plenty company, unfortunately.

Awww, poor me. :-)

Dickie bird didn't have the advantage of being assigned to a REAL Signal Corps Radio Station...like one built on an old airfield with rhombics on 90-foot poles for 42 transmitters varying in power from 1 KW (FSK CW) to 40 KW (PEP SSB)...or a receiver site shared with the USAF so large it was the largest such site in the world (1953-1956)...or a TTY relay facility so large it handled 200K messages a month on 220 p-tape machines...or many

24-voice-channel microwave equipments linking everything 24/7.
Not a single circuit used CW so I guess I "missed a lot" and
"couldn't join in the fun."   :-)

It must be that the "military-industrial complex" wiped out that
nasty old non-morse-code communications stuff and invested
it all into club and hobby communications at a place near
Red Bank, NJ. Sho boss, whatever y'all say.   :-)   :-)   :-)

I guess it only counts if you spend a lot of money on it, huh...?!?!

>The 64-dipole "bedspring" antenna (24 dbi gain) was left
>over from wartime work.

I guess it only counts if you order it to specification AND spend lots of money on it.

>>111.5 Mc. is not an amateur frequency, and wasn't one in 1946. What >>does Project Diana have to do with amateur EME?

>Project Diana is the first, repeat first, moonbounce
>demonstration. Someone had to be first. In this case
>the US Army Signal Corps was first.

Jim, you didn't expect Lennie to give an HONEST answer, did you?

>>>Project Diana was done 55 years ago.

>>So? It was a moon RADAR experiment, not a communications system.

>Not according to Jack Mofenson, one of the civilian experimenters.
>There was no need to use RADAR (or radar) to find the moon.
>Astonomers already knew were it was, is, would be.

Nonetheless, the technique used WAS "radar". It was NOT a communications technique they used.

>>How many taxpayer dollars were spent on that project?
>>What would that be in today's money?

>How is that relevant except to open up yet-another thread
>of diatribe about "wasteful government spending?"

Sure...Why "open up yet-another thread or diatribe about "wasteful government spending" when we can open up yet-another thread or diatribe about how Morse Code testing is the damnation of Amateur Radio...?!?!

Lord knows we don't have enough of THOSE in here.........

>"MILITARY-INDUSTRIAL COMPLEX" in 1946?!?!?

You have a problem with facts, Lennie?

Those thousands of aircraft, hundreds of ships and millions of weapons and other tools of war were just picked up Woolworth's...?!?!

>Oh, wow, yes, cribbing from a later ham publication source.

JIM! How dare you use facts from some source that LENNIE didn't know of first or approve of... ! ! ! !

>>>Have NCTAs claimed that the code test was a "barrier" for the
>>>"technically knowledgeable?"

>>Yes. Many, many times.

>Error. Faulty memory.

Lie. Attempt to obfuscate. Sorry Lennie. We're smarter than you.

>Firstly, there is NO valid necessity for a code test except in the
>personally-possessive, do-it-like-I-did-it attitude of the PCTAs.

Error. International law is the necessity for the test at present. It has nothing to do with your personal joust with a few persons in this NG.

>Secondly, the code test TURNS AWAY those, certainly those
>with previous radio experience, from bothering with a license
>test involving morse code.

Error. An Amateur Radio license has been avavilable for over 10 years now without a Morse Code examination. I know PH.D's, BSEE's and people with far greater credentials than YOU will ever own, Lennie, who have acquired and USE this license.

YOUR only "turn-off" is that even in that brief few minutes in front of an examiner team, you will be but a mere common citizen, and that rips your hide.

Too bad for you.

>Delusion, rationalization.

If it doesn't fit a "Lennie Rant", it's "delusion" or "rationalization". Of course any reason issuing forth from the keyboard of Lennie the Loser is The Truth, The Whole Truth, And Nothing But The Truth...yeah...RIGHT!

>>By your standards, no radio amateur has ever done anything of >>technical value in radio, Len.

>Error. Incorrect. False charge.

Other than your former employers at "Ham Radio", who have you recognizedas knowing ANYTHING, Lennie?

Not in THIS NG, that's for sure.

>Insofar as the ENTIRE RADIO WORLD is concerned, the state-
>of-the-art of all of radio has NOT been much improved since the
>early US amateur radio operators were reallocated below 200m
>wavelengths.

This is ripe. A lie, but really ripe.

>>They used Morse code for the 2-way QSO, too. Is that the problem?

>Why does N2EY ask?

Why DOESN'T Lennie answer the question?

>>What does any of this have to do with the excellent achievement of >>W7SZ and W7LHL? Nobody claimed their achievement was the first >>EME contact.

>Someone had to be first. Were these two radio amateurs the
>first amateurs to do moonbounce? [excuse me, EME in the
>correct parlance] Were they they first ever to prove the earth's
>moon could be a radio wave reflector?

None of those facts were in contention. Perhaps some review on YOUR part and then addressing the ORIGINAL comments IN CONTEXT might be appropriate...?!?! Of course, THAT would derail your "Hams don't do anything noteworthy" or "Morse Code Is Evil" rants.

>>Have any of those paid professional " technically knowledgeable
>>individuals" managed 2 way EME radiocommunication using low >>power (<10 watts), and modest antennas (<2 meter dishes)?

>I don't know, suppose that N2EY tells me.

You mean htere was something you couldn't find on a website, Lennie...?!?!

>One can look into NASA communications for the entire Apollo

If enough examples are made of the ones that are caught, it will certainly have
an impact - for awhile. All that's needed are some heavy fines and a lot of
publicity.

Nobody gives a crap what you put into your body so long as it doesn't adversely effect anyone else. But long years of experience show quite clearly that the vast majority who use certain substances cannot be trusted to be able to control themselves adequately, I.E. the drugs take over control and the capacity for rational thought and action (and reaction) evaporates. Thus the development of laws prohibitimng their use.

Sure, marijuana can be totally innocuous, to an individual who is smart enough (and can stay that way after consuming it) to stay out from behind the wheel and off the highways, and out of public where most seem to stand out like a sore thumb. Far too may users aren't capable of keeping themselves from becoming a direct problem to society by their inability to control themeselves after they use it. Ask any cop. A high driver is a real hazard to himself and everyone else on the road.

So it looks like you, along with the other marijuana (and stronger stuff) users will just have to stay off the roads and shut up in the house, where no one is likely to ever bother you while you do it. So long as you're just a consumer and not a retailer.
It's part of The Way it IS. Society's way of keeping the druggies off the road and out of normal people's hair (everybody else's-the majority, who make the laws for us all).

On Sun, 06 May 2001 19:41:34 GMT, W6DKN wrote:

>It could be similar to the programs used by police where they get a piece of the proceeds from each drug bust where cash and/or property is confiscated. Since many of the offenders that would be caught would also be in possession of radio equipment that could be of value to legitimate radio services, this equipment could confiscated and auctioned off to licensed operators. The proceeds of these auctions would then be added to the enforcement fund to help pay for more apprehensions.

Much as I support your good thoughts, when the enforcers get a "slice of the action", "the action" is open to widespead abuses, as we have seen in the so-called "drug war".

The FCC has always prided itself on being "squeaky clean" and making short shrift of its own folks who didn't want to be so, and I for one would rather see it continue that way.

>(and once a search warrant was executed I wouldn't be too surprised if they found drugs, stolen property, etc. during the search that could also be confiscated - and would generate additional criminal charges for the suspect)

According to U S criminal law, that could only happen if the contraband was in plain sight or in a place where one could expect to find the items specified in the warrant. The U S Marshals do that sort of search today.

Contraband is contraband - it is material that cannot be resold to others. Again, seizing stuff for resale leads to "dirty opportunities" when the enforcement agency gets a slice of the action. That's why the FCC is ordered by the court to destroy all equipment seized on its behalf by the U S Marshal Service.

If they can overtake you on the wrong side, then you have NO business
sitting in the middle lane. There are no 'slow' and 'fast' lanes on
British motorways. The Rule of the Road applies - you 'drive on the left
and overtake on the right'. If lane #1 is clear, you should use it, no

matter how fast you are going (provided that you are not constantly having to move into lane #2 or #3 to overtake). It is not your job to try and be a policeman, and create an obstruction by driving at the legal limit in the middle of the road.

Anyway, Walt, you used to ride a motorcycle. We car drivers KNOW that motoring laws don't apply to motorcyclists. When did YOU ever stick to the speed limits???
Ian. ;*)

PS
I think that the UK motorway limit should generally be 80mph (but rigourously enforced) but, in built-up areas, as low as 10mph where conditions call for it. Unfortunately, in the UK it is very difficult to put in place a limit of less than 30mph (I think it takes an Act of Parliament, or even an Act of God).

All of which are normal human responses to natural stimula. The fact that you equate those with illicit drugs effects is revealing.

I know some people who would argue with you that guns are not a

"normal" stimuli. :-)

Are you saying that marijuana, a God-given herb, is not a "natural"
stimulus, Dick? If marijuana is unnatural, why did God create it
and give us dominion over it? If marijuana is not natural, I can't
think of anything that is.

Could start a new sport, "Pirate Hunt", to replace Fox Hunting, where the local Hams track down local CB Radio pirate operators, and collect enough evidence to get them busted. Then the Hams who took part in the evidence collection are given an opportunity to bid on the confiscated equipment, on auction day, as a reward for their "public service" to the community. I doubt most hams would pass up a chance to pick up a nice Yaesu, Icom, Kenwood rig, base or mobile, for $100. It's sort of like taking a chance that you might win something at a Hamfest for the cost of the entrance ticket. In large metro areas, with a large population of pirates, I'm sure there are many chances to win. ;-))

Well think of the logistics. The average officer gives out what 10 tickets a day around 75$ a pop. 750$. Now his salary is 240$ a day. He will probably pay 50$ in gas for the touring he does. Administration as well is probably another 100$. So figure after all that he clears 350$. That is being very generous. In bumwad idaho (not an insult just my way of saying nowhere) they proably have 2 cops out per day and chances are they will split those 10 tickets between the two since population is small. Now the police pay 800$ a day for that 750$ income from tickets ... tell me where that makes sense that they do it for the profit ?

> Not idiots...just common evryday people that recognize BAD
> law when they see it and act accordingly.

Tell me how its a bad law ? People speed, simple physics will tell you that that increases kinetic energy and momentum thus increasing stopping distances. People already don't leave enough room at the slower speeds and keep the same distances at the faster ones. So not only were they doomed from the start before they started speeding since every accident that could happen with buddy in front would result in them being involved, but, now their stopping distances are even greater and they will impact with a higher velocity.

First off its law. You hams don't like those cb'ers breaking the law because of some little arbitrary thing like needing a licence to operate (having the sheet of paper does not make you a better op) but yet you find the "arbitrary" speed laws rediculous? They are there to lower the risk of accidents. Car's do not handle as well at the higher velocities, reaction times are required to be far faster etc etc etc ... They do have engineers and such who do determine hte maximum velocity that is safe on a particular road given its conditions or give it the max of 55 (its 65 now isnt it ?) since that is about what the average driver can safely handle.

Sideband, I will put a cup out for you since you are begging to be correct about full quieting. Notice Cecils definition, frequency modulation recievers, does this give you enough of a hint- that it is FM only. Do yourself a favor while studying for the ham test don't just memorize the answers actually learn what the question mean. If it was fill in the blanks the ham population would decrease by two fold.

Exactly, TL they think that 5 foot space between you and the car in front of
you is enough space to fit at 70 mph.

Dwight everyone liks to use the speeding comparision, even though it is
about as minor a law to break as any. Operating on the freeband and speeding
a far from the same thing, One is a hundred dollar fine the other a 10,000
fine ... this isnt rocket science ...

Now there you go! Another good idea - see what can happen when people start focusing on a solution instead of just complaining about the problem? There is no reason why there couldn't be more than one type of active program to address the problem. Several groups active in executing any type of solution would go a long way in reducing and/or eliminating the problem.

Pirate hunts... Excellent idea - a lot more fun, and considerably more rewarding.

Hmmm -- the FSK CW transmitter was 1KW, and the SSB

transmitter was emitting a 40 KW Death Ray. Kinda makes one
wonder. In spite of all that power on SSB, I'll still bet there were
plenty of places that couldn't hear that station! OTOH, the 1 KW
on CW should have been enough to communicate with everyone
between here and the Moon. That is -- everyone who knew the
code, that is!

>Date: 5/7/01 1:20 PM Central Daylight Time

>Heil is invited to peruse electronics industry trade magazines
```

>instead of relying solely on amateur radio publications.

Anderson has been REPEATEDLY offered the suggestion that HE might peruse some of the AMATEUR perodicals so that he might gain a more broadened perspective of AMATEUR matters before running his mouth off.

Judging by the usual lack of situational awareness he demonstrates vis-a-vis Amateur matters, it would appear he has decided to not persue this option.

>The IEEE History Society has a great number of "milestones"
>in electronics and radio, notable advancements which have
>been done by true pioneers. Are there any amateurs of note
>there? [accessible by non-IEEE members on the web]

Of course if "we" point out that Lennie's choices of "reference" material favor his particular opinion the same as any ARRL material might favor ours, I am sure he would find some reason to "rationalize" why HIS references are more "reliable" than "ours".

>Those who actually search libraries, the web, industry
>sources, military sources rather than relying on the lodge
>hall fraternalism presented in ARRL publications will find
>scant mention of "pioneering" by radio amateurs.

Most other "sources" have the funds and resources to promote thier positions and "history" more prolifically than hobbyists and volunteers.

Hence the "amateur" vs "professional".

>Problem
>is, the ARRL is also guilty of a long-term, almost-patronizing
>viewpoint in its publications that yields the impression of
>radio amateurs doing the majority of radio pioneering.

And of course this is an unjaded "professional" opinion. Thanks for the nice "warm and fuzzy" about the ARRL's services in the lead-in to this sentence...I felt the hammer falling before I got here, though.

>They have not done much in amateur-radio-only activities.

The ARRL has not done much in Amateur Radio only activites..?!?!

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

>The ARRL publications over-emphasize amateur "affiliations"
>of professionals engaged in radio and electronics as if the
>amateur affiliation is the only driving force behind their
>efforts.

More "unjaded opinion"...?!?!

>It seldom is, verifiable by any pick-up personal

>polling of electronics industry professionals done by
>other professionals...or by non-industry pros who don't have
>some agenda for propagandizing amateurism over and
>above all professionalism.

"Pick-up personal polling"...?!?!

BuuuuuuWHA HA HA HA HA HA HA HA HA HA HA HA HA HA HA HA

Real scientific stuff there, Lennie!

>Amateur radio is an avocation, a hobby. It is also an
>arena which is a perfect launching pad for some who wish
>to dream of "superiority" in radio by virtue of "credentials"
>in radio which are not recognized as "superior" by the rest
>of the radio world.

And once again Lennie starts off with the "warm fuzzy" about what Amatuer Radio is supposed to be then starts his anti-Amateur rhetoric again.

>No, not the "first." There are several others in here who seem
>to live solely for the chance to put down others for reasons of
>spite and petulance at their not being awarded the accolades
>they feel they richly deserve.

Other than yourself, Lennie, whom did you have in mind?

>Actually, given a perusal of archives, Heil is as guilty as anyone
>of failure to use the "I think" claim. Heil speaks as if he were
>the Voice of Ham Heaven come to "educate" the children.

Not "children"...just one spoiled brat.

>Do I speak for any "group?" Yes and no.

You speak for NO group. Unless you can provide us with some documentation as to appointment or election? You may share similar opinions, but you are NOT the "elected spokesperson" for ANYONE.

>My opinions on
>amateur radio regulations are generally shared with over two
>dozen acquaintences, only a few of which are "qualified" (by
>amateur radio license) to speak (be judgemental) about
>radio in general.

None of whom seem to be sufficiently motivated to put thier names to posts in support of you, your opinions, or "professional judgements".

I dare say if any of these "acquaintences" review any of the archives of this NG, whey will be wont to do that at all......

>No. I have never had any "personal problem" with other
>professionals concerning radio.

I bet if I go back to MY "acquaintences" at NADC, we will find out differently. Not a SURE bet, but one DOES wonder...........

>Only with those amateurs
>who feel their amateur "qualifications," "credentials," and
>accomplishments are somehow "superior" to the
>professionals

And only because YOU feel compelled to shove your tripe under our noses and dare to tell you what it smells like, and then have the temerity to become indignant when YOUR "infinite wisdom" is not universally embraced.

>I have no especial credentials as a professional, have never
>claimed any.

A lie. Plain and simple.

>I have been
>fortunate to have had a rewarding career in a field that was
>and continues to be most fascinating.

To bad it's not a real, "on the air" experience. Oh, I am sure you can run on down to wherever you might get some part time "consulting" woprk and eminate some RF, but with whom..???

>There are a few in here who resent others' life experiences,
>will wave their credentialed affiliations as "superior" and
>seek actively to put down others who don't share their
>personal viewpoints.

Other than yourself, Lennie, whom did you have in mind?

>Why is it so "necessary" that everyone "must" have this
>"qualification" to discuss amateur radio regulations?

Practical experience in Amatuer matters and activites....?!?!

Naaaah...that might mean you'd then have to make an INFORMED opinion, rather than the emotional, egocentric rantings you spew forth here. Can't have THAT now, can we...?!?!

>Actually, Heil's insistence is null, a non-sequitur. If the FCC,
>who regulate amateur radio and set the regulations, does not
>require staff or commissioners to hold amateur radio licenses
>to perform their legal task, why is it so "necessary" for non-
>radio-amateurs to need such a credential?

YOU are not an FCC commissioner. And to the best of my knowledge, no FCC staffers or commissioners participate in this forum. (save for Counsellor Kane's affiliations)

And if they did, I doubt we'd have them trying to rub our collective noses in the kind of hate-filled, rhetorical ripe you espouse.

>>It's gotta be a snap for a smooth professional such as yourself.

>Irrelevant sarcastic comment.

About a sarcastic, irrelevant commentor.

>Heil thinks wrongly. Heil makes assumptions without data and
>then tries to present them as "factual."

Pot/kettle/black. Often embellished with yet another rendering of the Anderson CV Extrodinare.

>I do not post messages on other newsgroups concerning
>amateur radio activities.

To the best of anyone's determination, you don't post anywhere else BUT here.

> As I've stated before, my interest is
>eliminating the morse code test for an amateur license

It's about eliminating ANY test that might make you realize your are no more/no less tahn any other citizen who has to sit the exams.

>This newsgroup is supposed to be the forum for that. However, it
>appears more as an arena where the self-alleged "superiors"
>can tell off the "inferiors" by any means possible.

>I do not
>think that is standard practice in amateur radio but if it were,
>it would certainly not be any enticement to "join the ranks."

If the love of radio itself is not "enticement" to "join the ranks", then you have once again demonstrated complete ignorance of what Amatuer Radio is about and have completely laid waste to many of your OWN rants........

>Why the "fixation" with some who want to play "judge" to
>put down others just for the sake of putting them down?

Witness the postings of "NoCWTest", "Avery Fine", "Lenof21", Len Over 21", etc, etc etc............

>It would seem those who will never ever have to take any

>regulations the same, cast in concrete, armor protected
>so that they can keep their "credentials" of "superiority"
>intact.

Keep repeating this to yourself over and over and over and over, Lennie...no one ELSE believes it....

 Yep, it sure is, right along with opium, cocaine, lead arsenic and
numerous other products of nature. Doesn't mean it's something that
contributes to your wellbeing, even if it might seem to.

>Hmmm -- the FSK CW transmitter was 1KW, and the SSB
>transmitter was emitting a 40 KW Death Ray.

"FSK" is an acronym for Frequency Shift Keying. As in the original US military plan from 1948, no CW codings were used in the worldwide net from fixed-point stations to fixed-point stations. ADA in Tokyo never used CW.

The "40 KW" PEP transmitter was a Collins commercial unit running as a linear amplifier for a 4 KW Western Electric SSB transmitter. Commercial and military SSB at the time had a 12 KHz wide modulation carrying four 3 KHz voice channels or two voice channels and AFSK TTY tones (number of circuits varied from 4 to 12 depending on whether the carrier equipment generated frequency-diversity pairs).

>Kinda makes one
>wonder. In spite of all that power on SSB, I'll still bet there were
>plenty of places that couldn't hear that station!

Irrelevant. Since all antennas were directional and the rhombics (aimed towards San Francisco and Honolulu and Seattle) had at least 10 dbi gain, the object was to maintain 24/7 serivce. That was done. REAL communications is not sporadic or of the "work lots of DX" activities of amateurs.

>OTOH, the 1 KW
>on CW should have been enough to communicate with everyone
>between here and the Moon. That is -- everyone who knew the
>code, that is!

Again, irrelevant. Unmanned spacecraft beyond the orbit of Mars have typically used less than 10 Watts of RF.

The object of REAL communications in a 24-hour, 7-day a week environment is to maintain communications despite vagarities of the ionosphere on HF propagation.

Just the facts, Ed. Give them a license and they'll still lack the
interest to do anything with it. Give them a handbook and it'll go on
the shelf to gather dust, if not in the trash. ARRL? What's that?
Ham radio grew by leaps and bounds for one basic reason - people were
looking for something recreational to do that looked interesting,
inviting and to some, challenging. That they leave it basically means
that other outlets proved more so, to them. Nothing cynical about it,
all the rhetoric aside.

Dick

Looking at ah0a.org licensing stats, there are 741 Extra tickets expiring in Apr 2011. Where might these have come from?

a. Renewals. But only 112 expired in April.
b. New. Presumably those issued in April will expire in April. All of 15.
c. Vanity for which the fee covers 10 years and generally result in a new 10-year term. 220
d. Grace period renewals, presumably also issued 10 years. 31

At 100% renewal, this still only adds to 378 of the 741. Upgrading generally does not change the expiration date.

This is true for each class and the service as a whole.

Was kommt??

Dick N�BK

It is bad law because people do not want the government
telling them how to live their lives and to what degree of
risk they can/should afford themselves. No one is mandated
to drive 70 MPH. If you don't want to drive a that speed,
then don't.

>People already don't leave enough room at the slower speeds and
>keep the same distances at the faster ones. So not only were they doomed
>from the start before they started speeding since every accident that could

Sign up with the Naderites then and push for a rollback
of highway speeds if you feel so strongly about it.

Cheers,
Bill K2UNK

>and I do miss the days of "no speed limit zone".

They were engineered for 70 when cars of far less technological
ability as to road handling were the norm. I-70 across Kansas
could easily sustain speeds well over 70 today even though the
road itself was engineered years ago.

>Problem is with fuel
>economy,

Fuel economy is an issue that impacts only ME. It is

none of the gov'ts business if I drive in a manner that
costs me fuel economy.

>doing away with frames,

Actually, todays "frameless" cars are better than those with frames in
the same accident.

>lawyers and millions of idiots who
>can't control there machine at speed.

Few speeding accidents ever involve other cars. Most
accidents are caused by non-speeding factors (alcohol,
reckless driving, etc.).

Cheers,
Bill K2UNK

More that they are there to garner revenue.

>Car's do not handle as well at the higher velocities, reaction
>times are required to be far faster etc etc etc ...

If YOU can't handle it, then don't. No one is forcing anyone to
drive 70.

>They do have engineers
>and such who do determine hte maximum velocity that is safe on a particular
>road given its conditions or give it the max of 55

Nope, the national 55 in effect for some 15 years had NOTHING to do
with safety when imposed. Since it has been lifted, highway detaths
per year are STILL dropping.

>(its 65 now isnt it ?)
>since that is about what the average driver can safely handle.

Many states it is now 70 or even 75. In NJ people routinely
drive 70-75 everywhere on the highway...totally ignoring
the posted 55 or 65 limits.

Cheers,
Bill K2UNK

I understand that CW is required to conform to the ITU. When will this archaic testing requirement be eliminated? Please do no misinterpret this message. I am advocating elimination of code test. We should not eliminate CW. IF CW is your thing, by all means go for it!

But so does FM. True, the noise vs. signal curve is different but it's
still there.

The cited definition does specify FM, but really the concept of "full quieting" is not at all meaningless on AM. Especially when you consider the effects of AGC, which will back off receiver gain and take the channel noise with it.

It's a bit more of a stretch, but really the concept of quieting isn't completely meaningless for SSB either, again considering AGC effects.

How long will the United Patriot Radio pirate station be allowed to operate EVERY day on 6.900 USB & every night on 3.260 USB without any penalty for operating without a license? Could it be that the FCC is quite afraid of the "militia element" involved with this operation?

While this blatent, unlicensed operation is CLEARLY not mobile, neither is "Riley the Radio Enforcement Hero" who supposedly earns his living by ACTIVELY ENFORCING Communications Law on behalf of the taxpayers as set forth by Congress. He should spend less time PREACHING to hams what "the spirit of ham radio" is as he sees it & more time in the field ENFORCING against flagrant lawbreaking.

Talk is cheap, actions are priceless.

How long will it take to "take him down" when the FCC can DF a signal in 11 seconds? Perhaps 11 weeks? Anderson has been on the air for at least that long so maybe it will take 11 months?

Riley hasn't made a true red-handed bust since KA2YBP, the now infamous 7240 SWL Net jammer, was caught in NJ back on October 18, 1998 after 11 weeks of weekly intentional jamming. KA2YBP later plea-bargained his way down from a $7500 fine down to a 3 year voluntary suspension of his license. All the other "busts" have been made on 3rd party hearsay. I guess this pirate has little or nothing to fear since nothing has been done thus far, he has already surrendered his ham license & clearly operates on regular daily schedule. You can see the website for schedule http://www.pbn.4mg.com/ His intentions are pretty clear & continue uncontested even tolerated by those who are supposed to be in authority. What kind of enforcement is that?

It seems clear to me who is scared of who. Riley prefers preaching to passive, wanna-be ham radio cops so they can go out & turn on each other while the FCC Enforcement "Head" willfully turns a blind eye toward a much more consistent & defiant lawbreaker!

You have far more to fear trying to sell a full coverage 800 MHz scanner on eBay than operating an unlicensed broadcast station. On eBay, Riley sees to it that even legal items get his IMMEDIATE ACTION. They're covertly pulled off auction for no legal reason since the ECPA does NOT regulate the resale of analog, cell-capable scanner radios manufactured & type accepted before the ECPA ban took effect! This is clearly unethical & Riley ought to know this since he is a lawyer, right? Enforce non-existant laws while ignoring violation of basic ones? Hmmmm...So much for guts, balance, & conviction in enforcement!!!

"We're working on it" doesn't cut it while slouching around the hotel buffet waiting to do your next hamfest road show speech Riley!

Maybe we need to replace you with someone who will, swiftly, on our behalf... Law is clearly no place for double standards!

I am listening to them right now, as usual, on 6900USB @ 2025Z 06MAY2001. So get busy & do what you are paid to do, ENFORCE!!!

Disgusted Taxpayer

Dick, where I worked in CA in the 70's, marijuana smoking was tolerated
at work. The VP of Engineering office often reeked of marijuana smoke.

I have no idea what is going on in the mind of a gangbanger, Cecil. However, since so many people use a weapon daily (target shooting, hunting, etc) without any chemical reaction that I'm aware of, perhaps the "power rush" you describe comes from the situation, not the weapon.

Cecil, you have to come up with something better than that. At "the turn of the century," driving a car while intoxicated was not a crime (heck, the car itself was not even that much of an issue back then). However, it is illegal to drive while intoxicated today. Likewise, drugs were not a problem at "the turn of the century." Today they are, so we have laws today to address them. The same can be said for a long list of other situations that were not a problem, or didn't exist, at "the turn of the century."

God also made dog manure, Cecil. Of course, that does not suggest that someone should pick it up and try to smoke it.

An AM carrier without modulation looks just like an FM carrier without modulation. So it seems to me that "quieting sensitivity" could apply to an AM receiver as well although the term "full quieting" is generally understood to apply to FM.

Since we don't live in that time, your question doesn't really mean anything. You don't even know what you would have done if you had lived back then. Remember, you would not have known what you know today - slavery was common back then and very few opposed it. What makes you think that you would have been one of those few? For all you know, you might have been a slave owner instead. In other words, if we're going to talk about today, lets stick to realistic situations today.

I agree. In fact, that is almost the exact same point I made a few messages ago.

Ok...

I stand corrected.

Allow me to rephrase what I'd originally stated, then..

My 2 watt AM carrier covered up all the background noise on the other guy's CB, which was roughly 20 miles away, according to his signal report.

The stumbling block, if indeed that is what it is is, that the very definition of an Amateur in the treaties requires Morse knowlege - taken these days to be 5wpm.

The earliest this can be considered is 2003 and probably only then if there is general concensus among governments and amateur societies to do it.

Given that it is done, and Congress does its thing, the rule-making process will take some more time. Even if the treaty allows it, it is not a given that we will be right in line to do it (although that is probably the way to bet).

A good guess is 2005. Morse Academy is at http://ah0a.org.

Dick N�BK

Still doesn't stop that idiot who is going to end up losing control of his car because he feels he should drive whatever speed he wants (since there wouldn't be any limit for him to abide by) and then crashing into my car. See believe it or not, MOST laws are there for the protection of OTHER people, not the offender.

Ya can't drive drunk under law because you are a danger to others, not yourself.

> love Cintonites because they all want to tell you and me how
> we should live our lives.

The amusing thing is ... the laws you do enjoy are exactly that. You know
like: murder, rape, robbery, assault, stalking, etc etc etc ....

The laws are there because the average person is too stupid to realise just
what is good and what isnt

My ability to handle the road is irreevant. Fact is there will be 10 idiots out there that will take full advantage of a no speed limit idea that can't handle the road well at 65 let alone 70+ and end up killing off a great deal of the population ...

> Nope, the national 55 in effect for some 15 years had NOTHING to do
> with safety when imposed. Since it has been lifted, highway detaths
> per year are STILL dropping.

What source did you get that info from?

> Many states it is now 70 or even 75. In NJ people routinely

>From: "Disgusted Taxpayer" disgustedtaxpayer@noenforcement.org

>Talk is cheap, actions are priceless.

These are people who, in some cases, actively advocate the overthrow of the US government by force.

You think it's a prudent thing to walk up to thier front door and tell them they are breaking the law (which they already consider to not be THIER law...?!?!)

>Riley hasn't made a true red-handed bust since...

And KA2YBP was operating from a "camp" in the mountains surrounded by like-minded, ARMED friends...?!?!

>It seems clear to me who is scared of who.

It doesn't take a rocket scientist to come to the decision to NOT confront someone who is armed to the teeth when all you are "armed" with is a copy of the Code of Federal Regulations.

>Riley prefers preaching to passive, wanna-be ham radio cops so they >can go

out & turn on each other while the FCC Enforcement "Head" >willfully turns a blind eye toward a much more consistent & defiant >lawbreaker!

Riley is not a sworn police officer. He is not armed. Do you presume to suggest that he blindly approach this character without the appropriate US Marshals in tow?

>This is clearly unethical & Riley ought to know
>this since he is a lawyer, right?

So challenge him in a class-action suit.

>"We're working on it" doesn't cut it while slouching around the hotel >buffet waiting to do your next hamfest road show speech Riley!

Brave talk from someone who is himself (?) hiding behind an anonymous domain.

>Maybe we need to replace you with someone who will, swiftly, on our
>behalf... Law is clearly no place for double standards!

You demand "bravery" yet you throw insults from no-name-land.

>I am listening to them right now, as usual, on 6900USB @ 2025Z >06MAY2001. So get busy & do what you are paid to do, ENFORCE!!!

His job IS enforcement...NOT voluntary suicide.

Get a life, anaonymous coward. Write a REAL letter to the FCC and sign your name to it. Better yet, write to your electeed representitives and complain to THEM.

Of course, anonymous cowards such as yourself are usually NOT registered voters, or if they are "registered", had some "real good reason" why they haven't participated in ANY voting in YEARS.

>Disgusted Taxpayer

Anonymous jerk.

     That's "hail" and Brit is capitalised.

     And if you have the "right" to presume to tell us what is right and wrong
about the death penalty for terrorists, I guess he has the right to chastise
YOU for not following posting convention.

     Not to mention repeating it six times in one post.

     Guess the rent-a-cop business must be slow in Canada these days.

Why ask us? Call the FCC then the White House and your
Congressman. Or, better yet, do something about it yourself.
When I was a boy my dad took me to see an example of civic
involvement. The dog catcher had spent the funds given him to
euthanize animals on booze and was instead using automobile
exhaust gas. The good old boys beat him into submission, covered
him in tar, broke a feather pillow over him and symbolically
carted him off on a rail, never to be seen again. That makes
more sense than whining to people with no more horsepower than
you have in a carefully anonymous NG post.

Point is, Dwight, we don't need no steenkin' law against smoking
dog turds.

Wow, you sure don't know how the brain works. If people didn't get
pleasure out of target shooting and hunting, they wouldn't do it.
The pleasure they feel is the release of a brain chemical. If I
remember correctly, the chemical is dopamine. When you feel good,
Dwight, you are on dopa.

Bad analogy, Dwight. Marijuana has been around longer than man. There
were not enough newly invented cars at the turn of the last century
to be a problem.

>
> Since we don't live in that time, your question doesn't really mean anything. You don't even know what you would have done if you had lived back then. Remember, you would not have known what you know today - slavery was common back then and very few opposed it. What makes you think that you would have been one of those few? For all you know, you might have been a slave owner instead. In other words, if we're going to talk about today, lets stick to realistic situations today.

Nice attempt at diverting the issue, Dwight. The point is that your attitude toward marijuana is just as unenlightened today as the attitude toward slavery was 150 years ago. We are in another era of prohibition. If we remain a free country, it will be repealed.

What percentage of freebanders get caught? What percentage of speeders
get caught?

In article Richard McCollum says...

>Looking at ah0a.org licensing stats, there are 741 Extra tickets expiring in
>Apr 2011. Where might these have come from?
>
>a. Renewals. But only 112 expired in April.
>b. New. Presumably those issued in April will expire in April. All of 15.
>c. Vanity for which the fee covers 10 years and generally result in a new
>10-year term. 220
>d. Grace period renewals, presumably also issued 10 years. 31

Hi Dick,

I haven't fully digested the question yet, but your point "c" (Vanity) doesn't work for me, since there are no vanity calls which are 10 years old. IIRC the first vanity calls were issued in November of 1996, so none of those should be due for renewal for another 5 years.

You could start by reading any of his posts. That should give you a clue.

> He has obviously had lots of

Voting in an election hardly counts as formulation of policy. Even the uninformed and stupid can and do vote. As to Larry's experience as a radio amateur: read any of his posts. That should provide a clue.

I see. No one need know much about something in order to form an opinion. Brilliant!

It's none of your business.
What do you care if a pirate operates or not?
Are they hurting you or affecting you in any way?
Fact is, you don't like the conservative right view, it has nothing
to do with the station being illegal, you just want to shut up the view.
Typical liberal, instead of turning the dial, instead you want to turn the station
off.

Face it, George looks like a monkey and is dumb as snot. As bad as
Clinton was, and as slug-like as Gore was, the republicans are so bad
they can't honestly win against them. Think about that!!!!

A top republican in Atlanta that was heading the impeach Clinton
movement resigned recently because he was caught (a second time)
exposing himself in a public park...and soliciting sex from an
undercover policeMAN (not police WOman).

Republicans are more likely to have sex with Yasser Araofat and his
male camel than women. Like they did with congressional pages.
